SPRAGUE RESISTORS

FILMISTOR® METAL-FILM RESISTORS

- Filmistor® C Series Resistors are Ideal for Circuits Requiring High Accuracy, Reliability, and Stability with Low Temperature Coefficients.
- Physical Size of Types RN55 and RN60 is Compatible With Those of Other Resistors, Capacitors, and Diodes for "Cordwood" Packaging.
- Designed to Meet the Stringent Performance Requirements of Spec. MIL-R-10509D.
- Low Self-inductance, Low Distributed Capacitance. Equal or Surpass the Characteristics of Precision Wirewound Resistors, Yet Are Smaller in Size.
- Metallic Resistive Film is Firmly Bonded to Special Ceramic Core, Automatically Spiralled to Desired Resistance Value.
- Tough Molded Shell Provides Protection Against Mechanical Damage as Well as Catastrophic Failures From Electrolysis Caused by Moisture Penetration.
- Standard Resistance Tolerance, $\pm 1\%$
- For Complete Technical Data, Refer to Latest Issue of Engineering Bulletin 7025
- Call Your Sprague Industrial Distributor For Quantity Prices.

New! VECO "THINISTOR"™ KITS (Thin Film Thermistors)

VECO's new revolutionary, ultra-thin, ultra-fast Thinistor Thermistors (See Figs. 12 and 13) now available in kit form for evaluation and for prototype circuitry development.

KFN101	4 Free-standing (no substrate) Thinistors	\$50.00
KFN201	6 Substrate-backed Thinistors	100.00
KFN301	2 Free-standing and 2 Substrate Thinistors	60.00
KFN401	2 Matched Pairs of Thinistors (Within 1%)	189.50

(For Infra-red Detection)

New! "VECO-VAMP" (Varistor Meter Protector)

Non-polarized, current-sensitive "VECO-VAMP" placed across the terminals of a sensitive meter, will shunt overload current in excess of normal range automatically! Save coil burnouts, damaged pointers!

Metohm[®] RESISTORS

Metal Film Precision Type

THE STANDARD OF QUALITY FOR MILITARY AND INDUSTRIAL PURPOSES

FEATURES

- High stability and reliability
- Designed to exceed MIL-R-10509F
- Close resistance tolerance
- Wide range of resistance values
- Stock or made-to-order types
- 1/10, 1/8, 1/4 and 1/2 watt sizes

In critical space-age electronic circuitry, METOHM metal film precision resistors guarantee high reliability, high stability, close accuracy, low TC and miniature size. Metohms are precision made under "white-room" conditions in the industry's most modern plant.

MIL SPECS. — All Metohm precision resistors are designed to exceed MIL-R-10509F char. C, D and E.

POWER RATING — is based on full rated load in an ambient of 125°C.

WELDABLE LEADS — gold plated Dumet leads and nickel "270" leads are available for weldable applications.

STOCK METOHMS — RN55, 60, 65 and 70 Metohm resistors, char. C, TC Code T2 (± 50 PPM) are stocked in MIL standard values listed below. Standard tolerance is $\pm 1\%$.

MADE-TO-ORDER TYPES — see data in accompanying tables for non-stock resistors available in production order quantities.

CONFORMAL COATED TYPES — also available in 1/20, 1/10, 1/8, 1/4 and 1/2 w. sizes. Durable solvent resistant coating allows smaller size. Ideal for micro module circuitry where space is at a premium.

Axiom[®] RESISTORS

Vitreous Enamel Wire-Wound Power Type

AXIOM FEATURES

Vitreous enamel construction
Space saving design
5 stock sizes; 8 made-to-order sizes
Wide range of resistance values
Standard tolerance $\pm 5\%$

Axiom, the miniaturized, space-saving power resistor line is designed for automation, printed circuits and advanced miniaturization use. Recommended for electronic and industrial use where high O.L. capacity and high stability are a "must". Four stock sizes and seven made-to-order sizes. Order by Stock Type and Ohms.

Silicone Precision Power Type

S-Coat resistor line represents the latest advance in silicone coated wire-wound power resistor design. S-Coat resistors are precision-made for precision applications requiring characteristics such as low TC, close tolerance, no noise, low drift, high O.L. capacity, vibration resistant and zero voltage coefficient. Order by Type Designation, Ohms and Accuracy if other than $\pm 1\%$.

WARD LEONARD

Vitrohm® RESISTORS
Vitreous Enamel Wire-Wound Power Type

Types 5F, 10F, and 20F.
Furnished with wire terminal leads. Brackets supplied on request.

Types 10A, 25A, 50A, 80A, 100A, 160A, 200A. Furnished with mounting brackets and one adjustable band.

Vitrohm fixed and adjustable power type resistors from 5 to 200 watts are designed and produced for high reliability. All cores, terminals and vitreous enamels are manufactured by W/L to guarantee top quality.

features

- 6 space-saving sizes
- low mounting brackets
- strong flattened cores
- suitable for multiple stacking
- Vitrohm construction

Vitreous enameled wire-wound resistors built on a strong refractory core, and provided with low mounting brackets. Particularly suited for applications where space is limited. Specially adapted to stacking for networks.

Vitrohm® RING RHEOSTATS

Ward Leonard Ring Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on 1/4" panel.

Standard Resistance Tolerance $\pm 10\%$.

MICROPOT® TRIMMING POTENTIOMETERS

Amphenol produces 10 complete series of Micropot trimmers—from subminiature square trimmers to standard sizes. Amphenol trimmers are offered in general purpose, humidity-proof, high temperature, or humidity-and-high-temperature models, in a wide choice of resistance ranges and end terminals. Amphenol trimmers have an adjustment screw for an extremely fine degree of selectivity. Wire-wound resistance elements are up to 50% longer than competitive types.

MICROPOT® METAL FILM TRIMMERS

Amphenol's Micropot metal film trimmers provide infinite resolution with a wide range of resistance value from 50 to 10,000 ohms.

MICROPOT® PRECISION POTENTIOMETERS

Amphenol offers a complete line of Micropot potentiometers for precision application—military and commercial—ranging from 1/2-inch to 3-inches. They are available in single-turn or multi-turn models with high resolution and a wide range of resistance values.

MICRODIAL® CONCENTRIC DIALS

Engineers consider the Amphenol Microdial line the most comprehensive in the industry. Concentric scale Microdials are available in three basic series. Each features epi-cyclical gearing to eliminate ambiguity, and large numerals for high readability. Each dial is available with or without brake. Most Microdial models are offered in a choice of color combinations for coding.

MICRODIAL® DIGITAL DIALS

Amphenol's digital Microdial line includes three, four, or five digit models. The 1300 Series has optional 10, 100, or 1000 turns. The 10-turn 1330 Microdial has internal illumination, convex lens, and is available with or without brake. Amphenol dials offer 1000:1 indexing accuracy, and are virtually free from accidental setting changes.

SUB-FRACTIONAL MOTORS

Amphenol's line of sub-fractional h.p. motors includes synchronous, induction, hysteresis synchronous, or low inertia types, in two, four, six or higher pole models. Amphenol motors speed/torque ratios meet the most exacting requirements of instruments, controls, and related products.

Indicate series, lead configuration, resistance value and accessory, if any.

For example:

ART 12 P 503 M

Series Lead Configuration Panel Mount

(This letter not required when ordering 110, 120, 300 and 870 Series units because model numbers indicate lead configurations.)

Resistance Value (First two digits are significant, the third digit indicates number of zeros to be added. For example, 503 represents 50,000 ohms.)

*Special resistances available on order.

**Lead Configurations: L=Flexible Leads; P=Printed Circuit Pins (on ART10P model pins are located on side); S=Solder Lugs; W=Solid Wire Leads; E=Edge Mounted Printed Circuit Terminals (on ART10E model pins are located on edge); H=Solder Hooks.

BPOT™ POTENTIOMETER

MODEL 3660 LABPOT
PRECISION POTENTIOMETER
Impact, dial-readout precision potentiometer designed as a convenient tool for a variety of laboratory applications. Incorporates Bourns' exclusive KNOBPOT® potentiometer for high stability through its unique "clock-dial" face. Compact, lightweight, yet remains firmly in place when in use. Large five-way binding posts with easy hook-up of any kind of leads. Fused protection against burnout. An extra fuse is provided inside for added convenience.

SPECIFICATIONS:

Std. Resistances 100Ω 1K, 10K, 100K (others available on request)
Resistance Tolerance ±1%
Dial Accuracy 20% 100Ω 15% 1K 10% 10K and 100K
Repeatability ±.05% voltage ratio
Operating Temp. Range -65 to +125°C
Power Rating 2.5W at room temp.
Mechanical Life 200,000 dial rev.
Weight 14 ounces
Prices 1-9 10-24 25-49 50-99
42.20 40.00 36.00 34.16

① Special resistances are available above and below the standard range shown. Consult factory for price and technical information. ② Std. Models exceed steady state requirements of MIL-STD-203, METHOD 103. Optional models are available meeting humidity cycling requirements of MIL-STD-202, METHOD 106. ③ Mechanical rotation continuous. ④ Electrical rotation only. © 1966 Bourns, Inc.

SERIES "A47" 1/2-WATT CONTROLS

Composition-element controls in the popular 1/8" dia. size. Series "A47" controls are field-assembled with the selected "Pick-A-Shaft" and "Ad-A-Switch". These controls are also available with factory-assembled shafts at no extra charge, by omitting prefix "A" from catalog number and designating the type shaft desired when ordering. Example: 47-100K-S with FKS-1/4 shaft.

MOLDED COMPOSITION ELEMENT POTENTIOMETERS

SERIES 53C1

SERIES 53C2

SERIES 53C3

A 2-watt molded composition element potentiometer totally enclosed and sealed against moisture and other environmental. Meets the need for a high quality resistance device incorporating high-stability under extreme climatic and operational conditions. For use in critical applications, such as, test equipment, military requirements, computers, servo systems and industrial metering devices.

1 1/8" diameter and 3/8" deep, wiper assembly of one piece construction; carbon to carbon contact insures exceptionally low noise level; brass nickel plated, gold plated terminals. Electrical tolerances are plus/minus 10% for all values up to 1 meg. and above plus/minus 20%.

Fabricated in accordance with MIL-R-94 Style RV4.

Items not listed are special, prices and information supplied upon request.

The C1 designation indicates a 1 1/8" round shaft beyond bushing; 3/8" long bushing with 3/32-NEF-2 thread. The C2 designation is a 3/8" screwdriver slotted shaft with a 1/2" split locking bushing. The C3 designation is a 3/8" round shaft FMS, 3/8" long bushing with 3/32-NEF-2 thread.

WIRE-WOUND CONTROLS

These are "Pick-A-Shaft" controls which take any one of 12 shafts listed on page R-24 including High Voltage Coupler and insulated shaft. Your choice of any one of the 12 shafts listed (this does not include insulated shaft) with each control. Tolerances of these controls are in accordance with EIA standards. Overall resistance

tolerance of plus/minus 10% for all values. All controls are linear. Available with factory-assembled shafts at no extra charge, by omitting the prefix "A" from the catalog number and designating the type of shaft desired when ordering. Example: 43-500 with FKS-1/4 shaft, or 43S-10K with FS-3 shaft and SPST switch.

SERIES BHM ROTARY SWITCHES

Series BHM switches are rated at 50 ma. at 300 V. a.c. or d.c., and 500 ma. at 30 V. a.c. or d.c. All moving parts and contact mechanism are totally enclosed, and the switch assembly is sealed for protection from dust and atmospheric conditions. They are particularly adapted to portable radios, receivers and transmitters, X-ray and medical instruments, calculating machines and computers.

Current: 50 Milliamps. at 300 volts a.c. or d.c.
Rating: 500 Milliamps. at 30 volts a.c. or d.c.
Protection: All moving parts and contact mechanisms are totally enclosed and switch is sealed, which protects it from dust and atmospheric conditions.

Shaft: 1/4" diameter round 1" beyond bushing.
Finish: Nickel Plating.
Bushing: 3/8" x 32 NEF-2 Thread. 3/8" Long.
Torque: 30 to 50 oz. in.

POWER RHEOSTATS

Clarostat Power Rheostats maintain their full power rating at settings as low as one-third rotation without excessive temperature rise. Standard overall resistance tolerance plus/minus 10%. Closer tolerances are available upon special order.

AN Types (aircraft type) are basically the same units mechanically and electrically except that they are encased in a metal housing (versus ceramic). Terminals are screw type lugs to prevent corrosion. Approved under MIL-R-6749.

Units mount through a single hole, a locking pin is provided for rear panel mounting.

SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre installations.

These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS

Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at $2\frac{1}{2}$ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 80db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, $\frac{3}{8}$ " bushing diameter. 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

- Attenuation range of 0 to 30 db over 90% of rotation, 60 db in remaining 10% of rotation. Attenuation will increase approximately linearly to 30 db with counter-clockwise rotation.

- Insertion loss less than 0.5 db.

- Input impedance within plus/ minus 20%.

- The CIT43 and CIBT43 (Bridged T Pad) have constant input and output impedances, while the CIL43 has constant impedance in the input only.

- Shafts and bushings are insulated from the circuit elements.

- Pads have $\frac{3}{8}$ "-32 x $\frac{3}{8}$ " long bushing.

- $\frac{3}{4}$ " dia. round shafts $1\frac{1}{2}$ " long beyond bushing.

- All pads supplied with bar knob and dial plates, as shown above.

- Dia. $1\frac{1}{4}$ ". Depth of body from mounting surface: CIL43— $1\frac{1}{4}$ "; CIT43— $1\frac{1}{4}$ "; CIBT43— $1\frac{1}{4}$ ".

uni-tite FIELD ASSEMBLED CONTROLS

Distributor's Uni-Tite Replacement Center will have more than 95% of your replacement control requirements including 15/16" diameter wire-wound controls, push-pull singles, dual controls, controls with rotary switches, and single control with rotary switches. These field-assembled, together controls provide you with the exact combination required for radio and TV replacements. In addition, a complete line of Uni-Tite assembled, dual controls, operating on a single tap are available to meet all your audio, hi-fi sound system requirements.

SERIES 76JA

Multi-Turn Trimming Potentiometer

A miniature, 10-turn trimming potentiometer that offers up to 15 times the winding length available in comparable units. This feature results in set-ability and resolution exceeding that of trimming potentiometers several times the size. Brief specifications include a power rating of $\frac{3}{4}$ watt at 85°C derated to zero power at 150°C, resistances from 100 ohms to 20K ohms standard with other values offered on special order, standard resistance tolerance of $\pm 5\%$, printed circuit or solder lug mounting, overall dimensions of only 1.250" x 0.437" x 0.328".

SERIES 62JA

Commercial Multi-Turn Potentiometer

A 10-turn potentiometer offering electrical operating characteristics comparable to units costing far more. Designed specifically for the industrial instrumentation market, the Series 62JA has the inherent advantages of far greater resolution in trimming, better instrument control and settings for all types of electronic equipment. Brief specifications include: $\frac{7}{8}$ " diameter, $1\frac{1}{4}$ " deep behind panel, bushing and shaft or split-locking bushing with screwdriver slot, 2 watts @ 25°C, derated to zero @ 85°C, 1000 to 100K ohms standard — others available, absolute linearity of $\pm 0.25\%$ standard, closer on order.

CLARODIALS

Ten-Turn Concentric Scale Dials

Calibrated dials designed for multi-turn potentiometers up to 10 turns or other rotary devices. CLARODIALS require only one inch of panel space. The knob attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel. As a result, accurate readings with a ratio 1000:1 for ten turns are provided with zero backlash and no reading error. CLARODIALS are made of anodized aluminum for years of attractive use. Mounting requirements are $\frac{1}{4}$ " shaft and $\frac{3}{8}$ "-32 NEF-2A bushing. Adapters for $\frac{1}{8}$ " dia. shafts are available.

Cat. No.	Description

3" Dia. Vari/Phase Single Turn Potentiometer

Permits external phasing of electrical rotation to mechanical rotation. Ultra precise unit for professional use. Exclusive Clarostat design eliminates bulky, hard-to-adjust clamping rings. Anodized aluminum housings for minimum weight. Widely used in aircraft instrumentation.

SERIES SC42-970 SINE-COSINE

Single-Turn Potentiometer

Used in radar, computer and servomechanisms, or any application requiring two output voltages accurately proportioned to the sine and cosine rotation angle. Due to functional use, units are designed and built for exceptionally long rotational life.

SPECIFICATIONS

FUNCTION: Sine-Cosine.
TOTAL RESISTANCE: 16,000 $\Omega \pm 10\%$.
POWER RATING: 2.46 watts @ 40°C.
(198 volts R.M.S.)
ROTATION: (Eff., Elec., Mech) 360° (Cont.)
MAXIMUM SPEED
RECOMMENDED: 30 RPM (20 gm. contact pressure)
EXPECTED LIFE: 500,000 Cycles.
RESOLUTION: 0.14% maximum of peak to peak voltage.
CONFORMITY: Standard, $\pm 1\%$ peak to peak voltage (Available, $\pm \frac{1}{2}\%$ peak to peak voltage. Not stocked — must be ordered special price and information on request.)
SHAFT TORQUE: 1 oz. in.
WEIGHT: 6 oz.

SERIES 57M & 57EJ**1/2" Single Turn Potentiometers**

High performance potentiometer packaged in a 1/2" diameter housing. Quality construction throughout. Available in two models, Series 57M rated at 1.5 watts at 40°C and Series 57EJ rated at 2 watts at 70°C. The high-temperature Series 57EJ features glass-sealed terminals. Both units are corrosion resistant.

SERIES 42JA**Single Turn Potentiometer**

All the same fine qualities and performance tolerances of the Series 42-900, with the exception of the additional tap, and shaft extension. The ideal unit for extra-dependable potentiometer requirements.

MINIATURIZED POTENTIOMETERS

Consistent with miniaturization in Military and Commercial equipment, such as; Guided Missiles, Aircraft Electronics, Mobile Radio and Radar, Computers, Range Finders, Pocket Radios and Hearing Aids; Clarostat offers miniaturized composition element Series 48M and wire-wound

Series 49M Potentiometers, and a Rotary Selector Switch designated as Series BHM to meet the switching requirements of the above mentioned and other applications.

**SERIES 48M — 0.2 WATT
COMPOSITION ELEMENT**

Available in single or dual, standard or shaft locking bushing. Standard bushing potentiometers have 1/4" x 32 NEF-2A x 1/4" long bushing and 1/8" dia. x 1/2" long shaft beyond bushing.

Shaft locking bushing potentiometers have 1/4" x 32 NEF-2A x 3/8" long bushing and 1/8" dia. x 1/4" long screwdriver slotted shaft.

All potentiometers furnished with mounting nut 1/4" thick x 3/4" across flats, and one internal tooth lockwasher. Potentiometers with split locking bushings furnished with jam nut also.

Insulation: Breakdown test between terminals and ground for 1 minute 1000v.a.c.; 350v.a.c. @ 3.4" Hg

Resistance Range (Ohms): Linear 200 to 5 Meg.
Tapered 1500 to 2.5 Meg.

Resistance Tolerance: Linear ±10%
Above 100,000 ohms ±20%.
Tapered ±20% all values.

Tapers: Linear

CLARO-DEC PRECISION RESISTANCE DECADE BOX

most flexible innovation yet in precision resistance decade boxes, the Claro-Dec serves many applications with all the versatility needed for the Claro-Decs (within established parameters of current) are used wheneverurate steps of resistance values between .1 ohms and 900K ohms, $\pm 1\%$ * required. Selection of desired steps of resistance is accomplished by in-

sertion of a banana plug into the proper, marked front panel hole on the unit. Individual or multiple Claro-Dec units are flush panel or breadboard mounted with equal ease. Units may be physically ganged by sliding the molded-in tongue-and-groove together and electrically series connected with a supplied wire jumper or accessory banana plug.

Net Each: \$3.95

* C — Contact Resistance, .005 - .03 ohms, typical, .01 ohms.

CONSTRUCTION

Housing — Two piece molded housing, color — grey.

Marking — Permanently marked with resistance multiplier, current rating, schematic and model number.

Resistors — Plastic coated wirewound for Models 260-1 and 260-2. Plastic coated metal film for all other models. Temperature coefficient less than 100 ppm.

Temperature — 40°C, max. at rated current, de-rated to zero at 85°C.

Weight — 2 oz. (approximate) per individual unit.

SERIES 63M TRIMMING POTENTIOMETERS

igned specifically for application on printed circuit boards, this new con-ration permits extremely close board-to-board spacing. Both metal and tic shafts and faceplates with wire or solder terminal leads provide nting facilities to meet virtually every application.

IFICATIONS

er Rating — .25 watt @ 70°C. Rerated to zero power @ 120°C.

king Voltage — 350 V.D.C. across end terminals, but power not to exceed rating.

Resistance Range — 100 Ω to 1 megohm, linear.

Resistance Tolerance — $\pm 20\%$

Mechanical & Electrical Rotation — 295°, $\pm 3^\circ$

Voltage Breakdown — 750 V.A.C. between terminals and ground for 1 minute.

Torque — 0.5 to 3 oz. in.

IRC-CTS SPECIAL PURPOSE CONTROLS

IRC, Inc.

TV ATTENUATORS for on-the-spot adjustment of signal input to TV set. In most cases it corrects or reduces adjacent channel interference, back ground picture on weaker stations, poor definition, picture and sound break over. Type QJ-3 is widely used in service work to duplicate fringe area signals when near strong local station.

LOUDNESS CONTROLS that are continuously compensated to boost lows and highs as volume is decreased. Maintains depth and brilliance even at whisper level. The LC-2 can easily be wired into most audio circuits. Typical installation instructions included. Uses types 76-1, 76-2 or 76-4 switches.

TV HEIGHT CONTROLS

AVOID CALL-BACK INCONVENIENCES

USES

This control is supplied for reliable replacement of TV Height Controls and other controls in B+C CIRCUITS — such as AGC,

NOISE GATE,

FOCUS,

FRINGE LOCK and

SYNC controls — which have become unsatisfactory because of element etching due to voltages present in the particular circuitry.

FEATURES

- Premium quality control (originally designed for rugged service in military gear)
- 1 watt rating, 750 V. max. between outer terminals
- Small size — 15/16" diameter — same as most original controls
- Nylon shaft — slotted and knurled — easily shortened where required
- Tab mounting
- Rear adjustment

2 WATT, 3/4" DIAMETER WIREWOUND CONTROLS

TYPE 110—TAB-MOUNT UNIT

IRC-CTS buzz-bias controls are 2 watt preset type wirewound resistors. They are designed for hum-balancing, sensitivity, bias-adjust. AGC, holding, locking, and other radio and TV applications. All units are $\pm 20\%$ tolerance, linear taper, and have contact arm grounded to housing.

IRC, Inc.

IRC-CTS TYPE 321 THREE-WATT INDUSTRIAL CONTROL (MILITARY GRADE)

SIDE VIEW OF TYPE 321S CONTROL

SIDE VIEW OF TYPE 321LT CONTROL
WITH LOCKING BUSHING

FEATURES

- COMPLETELY ENCLOSED CONSTRUCTION
- CARBON-CERAMIC ELEMENT
- EXCELLENT HEAT SINK QUALITIES
- MEETS MIL-R-94B, STYLE RV4
- HIGH INSULATION RESISTANCE OF CERAMIC
- LONG LIFE, LOW NOISE
- LARGE SAFETY FACTOR

ELECTRICAL AND MECHANICAL SPECIFICATIONS

- **RESISTANCE RANGE**
250 ohms through 2.5 megohms (linear taper).
- **TOLERANCE**
 $\pm 10\%$ standard, $\pm 20\%$ standard for values 1 megohm and above.
- **TAPERS** . . . Linear.
- **WATTAGE AND TEMPERATURE RATING**
3 watts at 70°C or 2 watts at 95°C derated to no load at 150°C .
500 volts DC maximum safe operating voltage across resistance element.
- **MOUNTING BUSHING DIMENSIONS**
Diameter: $3/8"$ — 32 N.E.F. thread
Length: Non-Lock — $3/8"$ standard
Locking — $1/2"$ standard
- **ANGLE OF ROTATION** . . . $315^{\circ} \pm 5^{\circ}$
- **SHAFT DIAMETER** . . . $.250" \pm .001"$
- **SHAFT LENGTH**
As shown under Ordering Information below.
- **SHAFT TRIM**
Screwdriver slot (Type LT) standard.
- **LOCATING LUGS**
Standard position is left side (terminals down) as illustrated.
- **TAPS** . . . None.

IRC-CTS CONCENTRIKIT® DEALER STOCKS

IRC, Inc.

SPACIOUS STOCK CABINET

The same spacious stock cabinet is provided with either No. 90 or No. 92 stocks. Permits ready conversion Basic Stock to Expanded Stock. Sturdy two-shelf metal cabinet measures 17 $\frac{1}{8}$ " wide, 11 $\frac{1}{16}$ " deep and 11" high. Provides twelve large "see-thru" drawers with locking divider feature. Drawers measure 11" deep, 11" wide and 2" high—956 cubic inches of stock space! Needed dividers are included. Both drawer front and bottom labels provide full location and identification data.

EXTENSIVE VARIATION OF CONTROL TYPES

CONCENTRIKIT Dealer Control Stocks provide an extensive variation of single and concentric dual control types. Included are a wide selection of control mountings, shafts, and power switches with both carbon (1 watt) and wire-wound (4 watts) front and rear sections. Control mountings include $\frac{3}{8}$ ", $\frac{7}{16}$ " and $\frac{1}{2}$ " diameter bushings, tab mounting plates and printed circuit brackets. Shaft styles include $\frac{1}{4}$ " and $\frac{3}{16}$ " diameter universal shafts, screw-driver slotted and insulated shafts, rear adjustment feature and a large selection of exact duplicate shafts which require no cutting or modification.

Rotary and pull-push power switches attach to either single or concentric dual styles. Concentric dual controls include carbon front and rear sections, wirewound front and rear sections and wirewound front sections with carbon rear sections. Carbon units are equipped with printed circuit terminals for universal use. Broad selection of resistance values and tapers. Replacement data, pricing information and full instructions included.

CONCENTRIKIT DEALER CONTROL STOCKS

Most widely used control replacement system, the new CONCENTRIKIT stocks employ the unique adaptability of this true control parts system to provide top coverage of needed replacement controls. Parts included have been carefully selected for broadest combinations for TV, radio, auto sets and high-fidelity equipment. The exclusive features of CONCENTRIKIT afford a nearly endless variety of single and concentric dual controls.

Two specially planned dealer stocks are available. No. 90 is a Basic Stock of Concentrikrit parts. No. 92 is an Expanded Stock providing over three times the replacement coverage. Both stocks are housed in the same large metal cabinet with twelve "see-thru" drawers. Special labelling supplies quick location and identification of parts. No. 91 Conversion Stock changes the Basic Stock into the Expanded Stock.

IRC-CTS TYPE 4W CONTROLS AND BASE ELEMENTS

IRC, Inc.

Types WPK and WPS are compact, 1¼" diameter wire wound controls available for replacement use in two popular shaft styles and an extensive variety of resistance values and tapers. Many stock numbers can be supplied as factory-assembled units. All stock numbers may be assembled in field using Base-Element with SK4 or SK5 Kit as desired.

Resistance elements are uniformly wound with highest grade alloy resistance wire on special form that withstands high temperature without shrinking. Pressure molded plastic housing is designed for maximum heat dissipation and accurate location of terminals. Contactor and collector are of long-wearing alloy that makes direct contact.

Resistance tolerance is $\pm 10\%$.

TAFT KITS FOR G-MOUNTED CONTROLS

lar to SK Kits, the TM series provide tab-mounting plate
ad of bushing. Metal-cased 76-1, 76-2 and 76-4 may be
with this series. Kits include shaft, tab-mount plate and
r.

Stock No.	Description
1	1/4" diameter shaft, 1/4" long FMS. Screwdriver slot and short knurl.
2	1/4" diameter shaft, 5/8" long FMS. Screwdriver slot and short knurl.
3	1/4" diameter shaft, 1" long FMS. Screwdriver slot and short knurl.
4	1/4" diameter insulated shaft, 1 1/2" long FMS. Slotted and knurled full length. Not used with switches.
5	Knobmaster shaft, 2" long FMS. Knurled, grooved and flattened.
6	Special rounded and slotted shaft for G.E. 1/32" long FMS.
7	Special rounded and slotted shaft for G.E. 1/32" long FMS.
8	3/4" diameter shaft 2" long FMS. Flattened and grooved.
9	Reverse tab mount kit nylon shaft, 1 1/2" FMS. 1/4" dia., slotted and knurled.
10	Tab mount kit nylon shaft, 1 3/4" FMS. 3/8" dia., flattened full length.

LTISECTION KITS

le kits provide parts needed to assemble desired Base-
ment into a Multisection or rear control section. Permits
nly of dual, triple or quadruple section controls. Each
contains internal shaft contactor assembly, front and rear
rs, coupling plate and section coupler. Close-coupled con-
tion provides minimum depth behind panel.

No.	Description
M	Multisection Kit for Type Q. Specially designed for critical requirements of stereo controls. Will operate rotary power switches.
M	Multisection Kit for Type 4W. Will not operate power switches.

SPECIAL BUSHINGS

Stock No.	Description
S1	Sleeve Bushing—attaches to 3/8"—32 Bushing.
S2	Bearing Bushing—attaches to 3/8"—32 Bushing.
S3	Spacer Bushing—attaches to 3/8"—32 Bushing. Sets control 1" behind panel.
S4	Universal 3/16" diameter Bushing—Type Q only. 1 1/2" FMS.
S5	Universal 1/2" diameter Bushing—attaches to 3/8"—32 Bushing. 2 1/4" FMS.

Q/4W CONTROL PARTS

These parts facilitate assembly of many varied controls using desired shafts and base elements.

Stock No.	Description
QCB	Type Q Bushing. 3/8"—32 thread. 1/4" long FMS. For single controls.
QCB-1	Type Q Bushing. 3/8"—32 thread. 3/8" long FMS. For single controls.
QCB-2	Type Q Bushing. 3/8"—32 thread. 1/4" long FMS. For single controls.
QCB-3	Type Q Locking Bushing. 3/8"—32 thread. 3/8" FMS.
QCB-4	Type Q Bushing. 3/8"—32 thread. 1 3/4" FMS. For single controls.
QCB-5A	Type Q Bushing. 3/8"—32 thread. 2" FMS. For concentric dual controls.
QCB-6	Universal 3/4" Diameter Bushing. 1" FMS, attaches to 3/8"—32 Bushings. Can be used as L and T Pad Bushing extender.
QCC	Type Q Cover. For plain or tapped controls.
QCL	Grounding Lug for 3/8"—32 Bushing. Lug length 1 3/8" from hole center.
QCN	Mounting Nut for 3/8"—32 thread.
QCP	Printed circuit bracket w/nut.
WPB	Type 4W Bushing. 3/8"—32 thread. 1/4" long FMS.
WPC	Type 4W Cover.

EXTENSION SHAFTS & COUPLERS

Stock No.	Description
441	Extension Shaft—4" x 1/4" with 1/2" flat.
442	Extension Shaft—4" x 1/4" with 3/8" flat.
443	Extension Shaft—4" x 3/4" with 1/2" flat.
444	Extension Shaft—8" x 1/4" with 3/8" flat for 4".
C3	Shaft Coupler—couples 1/4" shafts; insert allows coupling of 1/4" shaft to 3/8" shaft.

R4	WP Concentric Duals.
R5	Ground Plate Tab Concentric Dual.
R6	Retainers as supplied in K16, K17 and K18 Kits.
R7	Shaft retainer for 1/4" diameter shafts. Replaces R1.

SINGLE CONTROL SHAFTS

Using control parts listed on the previous page, these shafts will assemble many variations of Types Q and 4W controls. Individually boxed with R7 retainer (except TQ).

Stock No.	Description
AQ	Knobmaster shaft, 1/4" diameter, 3" long FMS. Flatted, grooved and knurled full length. Fits knobs requiring flatted or knurled shaft. Uses QCB Bushing. For Type Q.
AQ-5	Same as AQ but 5" long FMS. For Type Q. (Bushing included.)
AWP	Same as AQ but for Type WPK control.
AWP-5	Same as AWP but 5" long FMS.
JQ	1/8" diameter shaft, 4 1/8" long FMS. Flatted .105" full length. Uses QCB Bushing. For Type Q.
NQ	3/8" diameter shaft, 4" long FMS. Flatted and grooved full length. Uses QCB Bushing. For Type Q.
PQ	1/4" diameter shaft, 3" long FMS. Full round. May be used with 1/4" or 3/8" long bushings. (3/8" long bushing included.) For Type Q.
PWP	Same as PQ but for Type WP control.
RQ	1/4" diameter shaft, 1/2" long FMS. Screwdriver slotted. Used with 3/8" long bushing only (included). For Type RQ.
SQ	1/4" diameter shaft, 3/4" long FMS. Screwdriver slotted with short knurl. Uses QCB Bushing. For Type Q.
SWP	Same as SQ but for Type WPS. Uses WPB Bushing.
TQ	1/4" diameter shaft, 3" long FMS. Insulated, full round. Cannot be used with switch. Uses QCB, QCB-1, QCB-2. For Type Q.
VQ	1/4" diameter shaft, 1 3/8" long FMS. Tongued end 3/16" wide by 3/4" long by .050" thick. Uses QCB Bushing. For Type Q.
WQ	1/4" diameter shaft, 1" long FMS. Tongued end 1/4" wide by 1/2" long by .062" thick. Uses QCB Bushing. For Type Q.

SK2	Assembles Q Control with RQ Shaft.
SK3	Assembles Q Control with SQ Shaft.
SK4	Assembles WPK Control.
SK5	Assembles WPS Control.
SK6	Assembles Q Control with Insulated Shaft.
SK7	Assembles Q Control with Knobmaster Shaft and 76-5 Pull-push Switch (Switch included). Shaft is 3" FMS.
SK8	Assembles Q Control with 3/8" diameter universal shaft and 76-5 Pull-push Switch (Switch included). Shaft is 3 1/2" FMS.
SK9	Assembles Q Control with 3/8" diameter universal shaft. 3 1/2" FMS.

IRC-CTS CONCENTRIKIT® FOR CONCENTRIC DUALS

IRC, Inc.

CONCENTRIKITS® FOR CONCENTRIC DUALS

Broadest replacement coverage of concentric dual controls for TV, radio and auto sets is provided by CONCENTRIKIT® — the unique control parts system. Wide selection of exact duplicate shafts and bushings eliminates cutting, filing and slotting. The CONCENTRIKITS® are packaged groups of parts common to specific control types. Base-Elements are listed on pages 1196, 1197 and 1198. Specifications for nearly 2000 Exact Duplicate Controls included in Howard W. Sams "REPLACEMENT GUIDE FOR TV AND AUTO RADIO CONTROLS."

TOE SWITCHES

Special tone switch Base-Elements for use in panel section of auto radio controls. Bushings with detent-type panel cover.

Stock No.	Description
BS1	4 Position Tone Switch for Ford.
BS2	4 Position Tone Switch for Delco.
BS3	3 Position Tone Switch for Philco.
BS4	4 Position Tone Switch for Delco.
BS5	4 Position Tone Switch for Lincoln and Mercury.

CONCENTRIKITS®

Common parts for various types of concentric dual controls. Used with specific exact duplicate shafts and Base-Elements as specified in Howard W. Sams Replacement Control Guide, RGC.

IRC-CTS CONCENTRIKIT® EXACT DUPLICATE SHAFT SPECIFICATIONS

IRC, Inc.

EXACT DUPLICATE SHAFTS

Stock numbers and corresponding lengths are listed on these pages. In general, the last three numbers of the stock number indicate shaft length from control mounting face (not end of bushing) to end of shaft. Of the last three numbers, the first indicates number of inches and the second and third number indicates the number of 32nds. For Stock No. P1-210, length is $2\frac{1}{32}$ " or $2\frac{1}{16}$ ". For inner shafts employed with K3 CONCENTRIKIT, subtract $\frac{3}{32}$ " from dimension indicated by stock number.

There is an IRC-CTS Exact Duplicate Shaft available for nearly every concentric dual control. These Outer and Inner Shafts require no modification. Shaft lengths are held within close limits to original shaft lengths. Careful attention is given to end trims for fit to original knobs. The specifications on this page provide dimensions and use.

IRC-CTS INDUSTRIAL 4W CONTROLS

IRC, Inc.

WP

WM MULTISECTION

WPRL with Multisection

TYPE 4/W INDUSTRIAL CONTROLS

IRC-CTS Type 4W Controls for industry provide 4 watt (linear) control in conventional 2 watt size. Available in wide assortment of resistance values. Types WP and WPRL may be combined with Type WM Multisections to provide broad selection of tandem dual controls.

Electroplatings of metal parts provide outstanding appearance. Resistance tolerance of all units is $\pm 10\%$.

TYPE WP

Rewound industrial control with $\frac{3}{8}$ -32 x $\frac{3}{8}$ " bushing and a round shaft of $\frac{1}{4}$ " diameter, approximately 3" long from mounting face. For 2, 3 and 4 watt requirements — 10% tolerance; linear taper; in 36 stock values as listed on the opposite page.

TYPE WM MULTISECTIONS

Rear control sections which add resistance. Types WP and WPRL to supply a wide selection of tandem controls. Available in 13 factory-assembled stock numbers. Multisections do not operate power switches.

TYPE WPRL

Rewound industrial control with a short, screwdriver slot shaft of $\frac{1}{4}$ " diameter and approximately $\frac{1}{2}$ " long from mounting face with $\frac{3}{8}$ " locking type bushing, and locking nut. For 2, 3 and 4 watt requirements — 10% tolerance; linear taper; 36 stock values.

IRC-CTS INDUSTRIAL Q CONTROLS

IRC, Inc.

IRC 1/2 watt controls for industrial and commercial applications provide a wide selection of resistance values, tapers and shaft styles. Types PQ, RQ and RQL may be combined with Type M Multisections to provide broad variety of multiple-section controls.

TYPE PQ

Control has full round 1/4" shaft, extending approximately 3" from mounting face, and with 3/8" long bushing. 1/2 watt power rating, 500 volts maximum. It is available in 33 stock values.

TYPE RQ

Control has a very short screwdriver slot shaft of 1/4" diameter and approximately 1/2" long from mounting face, with 3/8" long bushing. 1/2 watt power rating. Supplied in 33 stock values.

Electrical rotation of these controls is the same with

or without power switches (See Type Q Accessories pages 6 and 7). Special platings of metal parts provide excellent appearance. Resistance tolerance of all units is $\pm 10\%$.

TYPE RQL

A 10% tolerance control with locking type bushing. Screwdriver slot shaft is 1/4" diameter and approximately 1/2" long from mounting face, with a 3/8" square type bushing, and locking nut. Supplied in 26 stock values. 1/2 watt power rating.

TYPE M MULTISECTIONS

IRC Type M Multisections are rear control sections which add to Types PQ, RQ, RQL or any Type Q control to provide multiple-section tandem controls. Supplied in 25 stock numbers as listed on opposite page. Resistance tolerance is $\pm 10\%$. See pages 6 and 7 for power switches and other accessories.

IRC-CTS SNAPTROL

IRC, Inc.

**PROVIDES VERSATILITY
AND EASE OF ASSEMBLY**

SNAPTROL. Newest of three IRC replacement systems designed to provide servicing technicians with satisfactory replacements for comprehensive coverage of single controls, tandem dual controls, matched stereo controls and concentric dual controls for television, radio, auto sets and high fidelity equipment.

SNAPTROL provides a broad variety of basic, factory assembled control sections, shafts and switches which snap together to provide a wide selection of replacement controls. Literally, it is a "snap" to assemble nearly any standard or special control.

SERIES 45 INDUSTRIAL CONTROLS. With a variety of five basic control components, the Series 45 line permits quick assembly of 12,631,500 different control specifications. These include single, double, triple and quadruple section controls, with or without power switches, in all popular styles and ranges needed for industrial electronic equipment.

Series 45 components are completely compatible and interchangeable with SNAPTROL. Together, these two snap-together systems provide an almost unlimited means to furnish unusual and special controls for industrial applications.

EASY TO USE. Parts assemble into exact duplicate control in 15 to 30 seconds. Sections completely factory assembled. No shaft cutting or modification needed.

GREATER VERSATILITY. SNAPTROL provides new and unique designs which provide for better utility and adaptability of component parts:

- 1—**Interchangeable Control Mountings.** $\frac{3}{8}$ ", $\frac{7}{16}$ " and $\frac{1}{2}$ " diameter bushings of varying lengths and bores, quickly thread into front control sections. Accommodates thick panel requirements *without* extra bushing or adjuster. Specially designed tab mounting plates or printed circuit brackets easily attached in place of bushings. This exclusive new design feature reduces the number of front sections needed and extends their use in a greater variety of replacement needs.

- 2—**Printed Circuit Terminals.** All carbon control sections are equipped with terminals that will handle both conventional and printed circuit wiring. This original IRC-CTS terminal design doubles the adaptability of control sections.

- 3—**Rotary or Pull-Push Power Switches.** Either type of power switch snaps onto either carbon Front or Rear Sections. Another exclusive IRC-CTS design feature which very considerably increases the utility of control components.

- 4—**Uniform Diameter Rear Section Shafts.** New design of rear section (inner) shafts provide uniform diameter — permits use of heavy-walled front section (outer) shaft contributing better concentric shaft operation and superior knob retention. Simple compression type adapter fits rear section shaft to knobs normally requiring larger diameter. No drilling or modification of knobs needed. Shafts are flattened or slotted as required — no shaft insert or time needed! This new design reduces the number of exact length shafts required for broad replacement coverage.

- 5—**Front Sections Serve for Single Controls.** Without modification or adapters, all SNAPTROL front sections may be used for single control replacements. Provides practical use of single front section for special bushings, tab mountings, printed circuits, special shaft needs and a variety of power switches. No other section-type control system provides such broad versatility.

FEWER COMPONENT PARTS. Because of the realistic design features provided, SNAPTROL requires far fewer items or components than any other section-type exact duplicate control system which offers so broad a replacement coverage. (Over 1700 exact duplicate concentric dual controls and many thousands of single controls.)

BEST SELLING CONTROLS. SNAPTROL is a special replacement design of the world's most frequently specified and most widely sold CTS Series 45 control. Over 300,000,000 in current use — a strong testimony to the quality and performance of these outstanding controls.

SNAPTROL CARBON
AND WIREWOUND
FRONT SECTIONS

Type CF Carbon Front Sections and Type WF Wirebound Front Sections are factory-assembled controls supplied without control mounting, shaft or dust cover. Bushing, tab mounting plate or printed circuit bracket thread into front section as required. Carbon or wirewound rear sections snap onto either type front section for concentric or tandem dual controls. A variety of single or concentric outer shafts snap into front sections. Either rotary or pull-push switches will snap onto CF Front Sections, WF Front Sections will not operate switches. Printed Circuit Terminals are employed

Type CF—no tap

Type CF—one tap

Type CF
two taps

Type WF

on CF sections while standard hole-type terminals are supplied on WF sections. Diameter of either front section is $1\frac{1}{4}$ " diameter. Wattage rating: CF Sections — $\frac{1}{2}$ watt, WF Sections — 5 watts (linear tapered sections).

CONTROL MOUNTINGS FOR FRONT SECTIONS

A variety of control mountings permit the use of SNAPTROL Front Sections for many different replacement controls. Bushings of varying diameters and inside bores thread into front sections. Tab mounting plates and printed circuit brackets attach to front section with special male nut supplied with each.

This exclusive design feature of selectable control mountings actually reduces inventory investment for distributors and servicing technicians. For a specific resistance value and taper, only one SNAPTROL Front Section is needed—in contrast to other systems where an additional front section is needed for each different control mounting.

CARBON & WIREWOUND REAR SECTIONS

Type CR Carbon Rear Sections and Type WR Wirewound Rear Sections snap onto SNAPTROL Front Sections for use as either concentric dual or tandem dual controls. Rotary or pull-push power switches snap onto CR sections. WR sections do not accept switches. Rear or inner concentric shafts snap into either type of rear sections for concentric dual operation. SS7A Intersection Insert provides tandem dual operation. Additional tandem sections may be snapped on by use of SS13 Multisection Couplers.

SINGLE CONTROL SHAFTS

Universal single control shafts for SNAPTROL permit front sections to be used as universal single control replacements.

STOCK NO.	DESCRIPTION
SS1	KNOBMASTER Shaft. Knurled, grooved and slotted for universal use. 3" long F.M.S.
SS2	Short, screw-driver slotted shaft. ½" long, F.M.S.
SS3	Short knurled and screw-driver slotted shaft. ¾" long, F.M.S.
SS4	⅜" diameter shaft. Flatted and grooved. 4" long F.M.S.
SS5	Full round ¼" diameter shaft. 3" long F.M.S.
SS6	Insulated Shaft. ¼" diameter x 1½" long. Screw-driver slot and knurled full length.
SS7A	Intersection insert. Converts concentric rear section to tandem rear section with single shaft.
SS8	Special rounded end and slotted shaft for G.E. controls—.79" long F.M.S.
SS9	Special rounded end and slotted shaft for G.E. controls—.60" long F.M.S.

STOCK NO.	DESCRIPTION
SS10	For K switch (push-pull) operation with single Front Section. 3" Knobmaster Shaft (same as SS1) with insert.
SS11	For K switch (pull-push) operation with single Front Section. 2" long flatted and grooved ⅜" diameter shaft (similar to SS4) with insert.
SS12	Long Knobmaster Shaft. Same as SS1 but 5" long.
SS13	Multisection Insert. For use between second and third or successive tandem sections. (Note SS7A used between first and second sections).
SS14	Short flatted shaft. ¼" diameter by ¾" long F.M.S., flatted full length. Provided for short, flatted tab mounted controls.
SS15	⅜" diameter shaft, flatted and grooved full length. ¾" long F.M.S.
SS16	Insulated shaft, ⅜" diameter flatted full length. 1½" long F.M.S.
SS17	KNOBMASTER Shaft. Knurled, grooved and slotted for universal use. 3" long F.M.S. with insert converting concentric rear section to tandem rear section with single shaft. For K switch (push-pull) operation.

EXACT DUPLICATE SHAFTS

SNAPTROL Exact Duplicate Shafts are supplied to close tolerances against original control specifications. Easily snap into molded nylon rotors of front or rear sections. Uniform diameter of rear section (inner) shafts permit use of heavier wall on front section (outer) shafts providing better concentric rotation and superior knob fit. Knob Adapter (Stock No. KA1) fits rear (inner) shaft to knobs normally requiring larger diameter shafts. No drilling or modification of knobs is required. No cutting of shafts is needed with SNAPTROL Exact Duplicate Shafts! Easy to install!

Knob Adapter. Fits rear section shaft to knob requirements of over-size shaft. Converts .187" diameter shaft to .202" diameter shaft.

IRC-CTS SERIES 45 CONTROLS

Designed to provide a wide variety of ½ watt controls for industrial applications, the Series 45 is a snap-together system in which selected values and sizes of five basic components will quickly assemble any of 12,631,500 specifications. Included are 25 values and tapers of single control or panel sections, 20 popular values of multi-sections or rear control sections, 20 most used shafts in length increments of ½" from ½" to 2" plus a 3" length, 2 rotary power switches and a control dust cover. Completely compatible and interchangeable with SNAPTROL, the Series 45 affords an extremely broad selection of mechanical and electrical specifications for industrial applications.

IRC-CTS SNAPTROL DEALER STOCKS

IRC, Inc.

WIDE COVERAGE OF CONTROL TYPES—SNAPTROL Dealer Control Stocks provide unusually wide variety of single, tandem and concentric dual control types. Included are nearly endless combinations of control mountings, shafts and power switches with both carbon ($\frac{1}{2}$ watt) and wirewound (5 watts) front and rear sections. Control mountings include $\frac{3}{8}$ ", $\frac{7}{16}$ " and $\frac{1}{2}$ " diameter bushings, tab mountings and printed circuit brackets. Shaft styles encompass $\frac{1}{4}$ " and $\frac{3}{16}$ " universal types, screw-driver slotted and insulated styles, rear adjustment feature, and a broad selection of exact duplicate shafts which require no cutting or modification.

Rotary and pull-push power switches attach to either single or concentric control styles. Concentric dual controls include carbon front end and rear sections, wirewound front and rear sections and wirewound front sections with carbon rear sections. Carbon units are equipped with printed circuit terminals for universal use. Broad selection of resistance values and tapers. Replacement data, pricing information and full instructions included.

No. 89 STOCK

SPACIOUS STOCK CABINET

The same handsome stock cabinet is provided with either No. 87 or No. 89 stocks. Permits ready conversion of Basic Stock to Expanded Stock. Sturdy two-shelf metal cabinet measures $17\frac{1}{8}$ " wide, $11\frac{1}{16}$ " deep and 9" high. Provides twelve large "see-thru" plastic drawers with new locking divider feature. Drawers measure 11" deep, 4" wide and 2" high—956 cubic inches of stock space! All needed dividers are included. Both drawer front and bottom labels provide full location and identification data.

SNAPTROL DEALER CONTROL STOCKS

Geared to the real replacement control needs of servicing technicians, these SNAPTRON stocks combine fast, snap-together assembly with unique, inventory-saving versatility. Carefully studied selections of SNAPTRON components assure broadest needed replacement coverage per dollar invested. Special attention has been given to actual component combinations needed for exact duplicate TV and Auto Set concentric dual controls.

Mallory Wire-Wound Controls

3-WATT TYPE MR WIRE-WOUND CONTROLS

Only $\frac{3}{4}$ " diameter, MR controls are used for applications in AGC, convergence, hum-balance, etc. Case is fully enclosed; MR, all metal; MRC, metal mounting plate with molded nylon body and knob. Types MR and MRC directly replace older FL and PFL types as shown in cross-reference. Five mounting configurations available. Conversion from cross-slot adjustment to shaft may be made using plug-in shafts listed. **Wattage Rating at 40° C:** MR, 3 watts; MRC, $1\frac{1}{2}$ watts. **Rotation:** 250° mechanical; 248° electrical. **Resistance Tolerance:** MR, $\pm 20\%$; MRC, $\pm 10\%$. **Voltage Breakdowns:** MR, 900 VAC rms; MRC has grounded contact arm.

VITREOUS ENAMELED RHEOSTATS

Twelve sizes in wirewound, vitreous enameled rheostats are stocked by Ohmite distributors all over the country and at the Ohmite factory. This selection, the most extensive available to industry, covers ratings that meet the major portion of design, production and emergency needs. Ratings of $7\frac{1}{2}$, $12\frac{1}{2}$, 25, 50, 75, 100, 150, 225, 300, 500, 750 and 1000 watts are standard.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure at the contact and at the center lead are independent. Ohmite Rheostat Models H, J, G, K, L, P, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in *free air*; when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

MODEL "C" — MINIATURE RHEOSTAT

In this era of miniaturization and transistorization, the Model C enlarges the horizons of designers by providing greater design flexibility. In addition to its small size, its versatile solder terminals will also plug into common transistor sockets or circuit boards. It is stocked with both standard and locking type bushings.

RHEOSTAT TANDEM COUPLING KITS

Inexpensive kits assemble standard Ohmite Model G, H, J, K, L or E (miniature) rheostats. Each kit consists of a steel "U" frame, a coupling with set screw, mica washer, Allen wrench and assembly instructions. Rheostat shafts are joined by the coupling which is fastened to the shaft of the rear unit. Projections on the coupling fit a recess in the rear hub of the front unit. Stock No. 6533 kit, mounts Model G, K or L units but accommodates Models H or J in the rear position. Stock No. 6532 unit mounts Models H or J but accommodates Models G, K or L in the rear position. Stock No. 6591 kit assemblies only Model E (miniature) rheostats.

MOLDED COMPOSITION POTENTIOMETERS, 1/2 and 2 WATTS

Used in commercial and military electronic applications where high quality and dependable performance are important. Type AB, 1 1/2" dia., is rated 2 watts at 70°C ambient and is available with 3/8" slotted shaft (CMU), 2" unslotted shaft (CU, CA, CB, CCU dual unit) and locking type slotted shaft (CLU). Type AS, a miniature unit 1/2" dia. rated 1/2 watt,

is available with locking type shaft (Style AS) or 3/8" slotted shaft for knob control (Style ASM).

Because of their molded composition elements, these units outlast and outperform film type units. Noise level is exceedingly low. Single control Type AB units extend 3/8" behind panel; dual con-

trol 1 1/4". Type AS miniature unit extends 1/16" behind panel. An SPST switch for single Type AB units is available. Units are dust and splash proof, fungus and corrosion resistant and meet the latest requirements of MIL-R-94. Styles CMU, CLU, Styles AS and ASM conform respectively to MIL-R-94 Styles RV4N, RV4L, RV6L, and RV6N.

TRIMMING POTENTIOMETERS

If your electronic equipment design calls for precise trimming with high reliability at realistic cost per unit, you should know — (1) Spectrol designs virtually eliminate noise, hot spots, burnouts, and wiper shifting; (2) Spectrol's selection of terminal configurations is the broadest in the industry; (3) Spectrol trimmers are available in all major configurations, sizes and

performance types including ultraminiatures and models that meet severest environmental MIL-SPECS; (4) All lines are subjected to an overnight temperature stabilization process; (5) All models are 100% electrically inspected; and (6) Prices on these military-quality industrial trimmers (many less than \$2 each in quantity) are keyed to a competitive market.

Rectangulars—Large diameter mandrels dissipate heat efficiently to eliminate burnouts and open circuit failures. Dual wipers maintain positive contact under shock. Military and industrial models. **Squares and Rounds**—Mandrel and case configurations contribute to high power dissipation. All models

meet or exceed applicable environmental military specifications, and are humidity-proof at no extra cost. **Ultraminiature Transistor-Size Models**—Volume of only 0.02 cubic inches allows mounting in one-fourth the usual space. Ideally suited to high-component-density, solid-state, printed circuit applications.

PRECISION POTENTIOMETERS

For most applications, choose from the complete Spectrol series of single-turn, three-turn, five-turn, ten-turn, precision wirewound potentiometers listed on these two pages. Many models can be ganged and easily phased in the field.

Close linearities are assured by winding equipment designed and built in-house by Spectrol. Other quality features include: fine resolution from extra-long resistance elements; high reliability

through a unique "whisker" slip ring brush that assures positive contact under severe shock and vibration, yet exhibits low torque and long rotational life; and mounting flexibility with optional servo and bush mountings. All models meet or exceed applicable military and commercial specifications for rotational load life, temperature range, shock, vibration, humidity and salt spray.

PRECISION POTENTIOMETERS

For special applications, remember Spectrol's well-earned reputation for unusual service in providing special precision potentiometers to help equipment designers solve unique problems.

In addition to offering a full line of off-the-shelf models,

Spectrol is a custom house whose success is founded on exceptional responsiveness to its customers' needs and requirements. You can confidently turn to Spectrol for highly competent support in your most challenging design assignments for which no standard potentiometer is available.

NON-LINEAR POTENTIOMETERS

On the tables below, high and low values of resistance, with corresponding "best practical" peak-to-peak conformity obtainable, are given for the functions in each model size under the conditions of full electrical rotation and unloaded slider. For function angles less than full rotation, resistance and conformity values can be calculated based on resistance being directly proportional to the function angle, and conformity being inversely proportional to the function angle.

Empirical (Data Points)

Resistance and conformity is given in the table below in terms of S (maximum $\frac{\Delta(\frac{e}{E})}{\Delta X}$), provided the following conditions are met. $0 \leq \frac{e}{E} \leq 1, 0 \leq X \leq 1$ and $\frac{\Delta(\frac{e}{E})}{\Delta X}$ does not change sign (i.e., no slope reversal).

SWITCHES AND MULTIDIALS®

Spectrol Model 88 Rotary Selector Switches introduce a new dimension of flexibility to discrete component circuitry. Now, for the first time, miniature switches are available in volume quantities at production-line prices for mounting directly on printed circuit boards, or for panel mounting. Designed with only two moving parts, these unique ½-inch switches have application wherever printed circuit boards are used... can be used to

make other components do multiple duty. Spectrol offers the new switches in both ten-position center-pin and nine-position center-pin configurations for wide use on either double-sided or single-sided boards.

Multidials: Spectrol also offers a complete line of precision turns-counting dials for use on multi-turn potentiometers and other rotating devices.

CONANT MINIATURE METALLIC RECTIFIERS

All Conant rectifiers are manufactured to the highest quality standards from individually tested and graded cells. Copper oxide cells are produced by the exclusive Conant Process and have 24K gold contacts applied in high vacuum.

The Conant Complete Color Code permits identification of rectifier type by color and physical form.

Only basic standard rectifier types are listed below. Many other standard catalog items are available and we are prepared to produce special items to meet customers' special requirements.

NEW G.E. GE-504A UNIVERSAL RECTIFIER

A silicon rectifier with a 60-amp surge rating. Recommended as a replacement for all selenium, germanium and silicon rectifiers used in TV receivers. The 60-amp surge rating eliminates the need for the urge limiting resistors normally required when silicon rectifiers are used.

PIV is 600 volts; max. I_{DC} , 1 amp. Shipping weight: 2 oz. List Price \$1.10.

G.E. SILICON AND GERMANIUM RECTIFIERS

These top hat, hermetically sealed rectifiers are designed for general-purpose applications requiring maximum economy.

GENERAL ELECTRIC

DUAL DIODES

IRC, Inc.

DIODES. Universal selenium dual diodes for horizontal phase detectors and remote control in TV receivers. Also used in radio control devices for model planes, and other circuits. Available in four basic types.

The small size, economy, ease of installation and reliable construction of the IRC dual selenium diodes make them ideal for many low-voltage, low-frequency applications. To suit them to various circuits, these dual diodes have either common-anode, common-cathode, or series form of internal connection. The cells in each unit are matched to assure electrical balance.

Alloy-plated leads facilitate soldering. No clamp or other mounting device is needed, since the three leads readily support this flyweight unit.

Designed for Long Life

Construction features include an integral heatsink and a "floating" spring that gives proper pre-load over the full operating temperature range. No paper, aminates or other material that might absorb moisture are used. Moisture-excluding materials cushion the active elements and isolate them from encapsulant.

Electrically Balanced and Noise Free

IRC processes each selenium cell to give it a smooth, uncontaminated surface and periphery with no fractures. This technique insures uniform current density over the entire cell area and prevents noisy, unreliable operation.

To indicate polarity, one corner of the case has a diagonal cutoff. This assures correct orientation of units in automated assembly, and allows use of both sight and touch to get proper polarity at manual assembly and inspection.

Semiconductor Heat Dissipators

THERMA-LINK RETAINERS—FOR TO-5,
TO-18 TYPE TRANSISTORS

These devices are designed as efficient retainers and heat sinks when mounted to P-C boards due to their excellent conductivity and extra mass. They also provide an efficient thermal link between transistor and chassis or heat sink. Beryllium copper spring fingers firmly retain transistors, yet fit wide case diameter variations and make transistor insertion easy. Available with Beryllium Oxide when a reduction in capacity between transistor and ground is needed in high frequency applications. Bulletins 141, 144; test report 206.

"FAN TOP" SERIES—FOR TO-5, TO-18
TYPE TRANSISTORS

The exclusive "Fan Top" design gives unbelievable case temperature reduction in natural or forced convection. It allows location of other components close to transistors, yet adds virtually nothing to board height. Beryllium copper spring fingers firmly retain transistors, yet fit wider range of case diameters than any other configuration. Low-cost "Fan Tops" are designed for fast, economical press-fit installation without tools. Bulletin 131.

LP SERIES—FOR TO-5, TO-18 TYPE TRANSISTORS

Versatile transistor cooling devices provide excellent heat dissipation in applications of low to high power transistors of TO-5 and TO-18 configuration. Employing the efficient staggered-finger configuration—IERC's exclusive design to optimize convection currents and radiating surface area—they are available for single and multiple transistor mounting. UP SERIES—FOR POWER TYPE TRANSISTORS AND DIODES

UP Series design gives maximum dissipation in medium power applications at lower cost than comparable finned extrusions. Staggered-finger configuration—a design exclusive with IERC—allows maximum efficiency in both natural convection and forced air at less weight and volume. Increased dissipation can be achieved by mounting dissipators back-to-back on a bracket. Standard finish is black anodize. Bulletin 134; test report 172A.

For other hole patterns, see your IERC representative or consult the factory.

HP SERIES—FOR POWER TYPE TRANSISTORS AND DIODES

Due to the staggered-finger design, heat dissipation performance is comparable to conventional extrusions up to 3 times as heavy and 30% larger. The two sizes may be used separately or with the smaller unit nested in the larger unit. Standard finish is black anodize. Bulletin 139; test report 198.

INSULUBE 448 FINISH FOR HEAT DISSIPATORS

The Insulube 448 finish is the only proven finish for positive electrical insulation in electronic equipment that meets the most stringent environmental requirements. □ Non-hygroscopic □ High emissivity surface □ Salt spray resistant □ Low thermal resistance □ Unaffected by elevated temperature □ High dielectric strength □ Low insulation resistance.

Insulube 448 is available on all IERC heat dissipators by deleting the suffix letter "B" from the standard part number. For application to complete chassis, thermal packages, enclosures and various other structures, consult your IERC representative or the factory.

GERMANIUM DIODE

A wide choice of popular characteristics in low power germanium and silicon diodes is available immediately from Ohmite stock. Both the germanium and silicon types are supplied in the subminiature, hermetically sealed glass envelope (see diagram). The silicon envelope is light-shielded.

High stability is achieved through temperature cycling and aging. All units must meet severe environmental, electrical and mechanical requirements with a liberal safety factor.

GERMANIUM DIODES—Ohmite supplies the gold-bonded variety. Power rating is 80 mw at 25°C except where otherwise indicated. Operating temperature range is -65°C to +90°C.

SILICON DIODES—Employ either the alloy or diffusion method of junction formation. Power rating is 400 milliwatts at 25°C except where otherwise indicated. Operating temperature range is -65°C to +150°C.

DIODE
METERSAVER
PROTECTS
METERS

Designed to protect sensitive (high internal resistance) meters against burnout due to overload even where potential is reversed. Introduces negligible error. Consists of 2 silicon diodes in compact case with leads and lugs. Connects across meter terminals without regard for polarity. Shunts excess current around meters—for example, can convert 200 times overload to 3 times overload. Allows use of less expensive meter fuses. Can be used with meters of low internal resistance but use of series resistor is then recommended.

MALLORY**Silicon Rectifiers**

Mallory silicon rectifiers are produced by the diffused junction process. This process provides superior operating characteristics when compared to alloy junction types. An exceptionally broad range of case styles is available to suit most installation requirements. Styles A and T have "cold" cases which offer outstanding humidity resistance and have withstood the rigorous "Joy Bomb" test. All types exceed rated JEDEC standards.

MALLORY**Packaged Rectifier Circuits**

Mallory pre-packaged rectifier circuits offer outstanding advantages to both the circuit designer and the service technician. The circuits are composed of carefully selected and matched diffused-junction silicon rectifiers. This ensures a balanced operation difficult to attain with individual rectifiers. In addition, size is smaller than the equivalent number of individual rectifiers. In all cases, there are fewer solder joints to make. Quality is guaranteed by Mallory, the pioneer in pre-packaged rectifier circuits.

There are four basic circuits available: Voltage doublers, full-wave circuits in both center-tap negative as well as positive, and full-wave bridge. A full range of inverse voltages and output currents are listed.

Cases for all types have the same external dimensions and are made of specially formulated pre-formed plastic. High density end fill ensures maximum humidity protection. The cold case design avoids stray shorts to other nearby components. The dense packaging material provides excellent heat dissipation.

**CUSTOM SEMICONDUCTOR
PRE-PACKAGED CIRCUITS**

In addition to the standard pre-packaged circuits shown above, Mallory can supply a wide variety of custom circuits. For example, a zener diode can be added to the FW circuit in order to provide a positive control on the DC output. In order to specify such a device, select the output voltage desired from 6.8 to 200. Then, select the current output of 1.5, 2 or 3 amperes. A typical rating is FWZ10 having an output of 10 volts and 1.5 amps. For further data, contact Mallory. Any combination of up to five semiconductors can be enclosed in a single package.

Silicon Zener Diodes

SILICON ZENER DIODES

Mallory zener diodes are produced by the diffused junction process which offers superior operating characteristics compared to the alloy junction type. Three power ratings are supplied: 1, 3, and 10 watts. Four basic case styles are available. The "cold" case styles (ZA, ZAC, ZT, and ZTC) offer outstanding performance at relatively low cost. All types offer low thermal resistance and excellent forward characteristics. Rugged cell construction allows high surge capabilities. All types exceed MIL requirements. Select style and wattage required, then specify tolerance by suffix letter. Values shown are $\pm 20\%$ (no suffix), specify A for $\pm 10\%$, B for $\pm 5\%$, or C for $\pm 1\%$. Also available in matched pairs on special order.

TYPE ZA

One-watt, cold case type designed for high density packaging in commercial and military applications. Cold case eliminates need for insulating sleeve and provides excellent heat dissipation and humidity protection. **Case Size:** .200" dia. x .375". **Leads:** .032" dia. x 1.25" (min.).

TYPE ZT

One-watt, cold case design with radial leads for printed circuit board applications. Dipped in high density encapsulating material for maximum humidity protection and heat dissipation. Cold case provides excellent insulation for high density packaging. **Case Size:** .437" h. (max.) x .408" w. (max.) x .185"-.250" th. **Leads:** .032" dia. x 1.5" lg. (min.) x .375" spacing.

TYPE ZD

One-watt flangeless, hermetically-sealed metal case (EIA DO-13). Designed to surpass most critical MIL standards. **Operating and Storage Temperatures:** -65° to $+175^{\circ}\text{C}$. **Case Size:** .240" dia. x .405". **Leads:** .032" x 1.25" (min.).

TYPE ZAC

Three-watt, cold case design; same case size as ZA type, except leads are .051" dia.

TYPE ZTC

Three-watt, cold case design similar to ZT type. Case size is the same, except that leads are .051" dia. specially annealed.

TYPE ZS

Ten-watt, hermetically-sealed stud type zener diode in standard EIA DO4 package. All-welded construction provides very low thermal resistance for maximum heat dissipation. Meets or exceeds all applicable MIL standards. **Operating and Storage Temperature:** -65° to $+175^{\circ}\text{C}$. **Case Size:** $\frac{1}{4}$ " hex base with solder stud $\frac{3}{16}$ " above base, #10-32 stud x $\frac{1}{4}$ " lg. Supplied with HD04 mounting hardware kit. **Standard Polarity:** Anode to stud; for cathode to stud, add suffix R (e.g., 1N2970R, 1N2970RA, etc.), same price.

Dual Trigger Diodes

Mallory Dual Trigger Diodes are symmetrical three-layer avalanche devices used to control silicon controlled rectifiers and "Bi-switches." The device exhibits a unique characteristic in having a symmetrical switching mode which "fires" in both directions. This symmetrical action takes place whenever the breakover voltage is exceeded on either side of a cycle. Thus, it is able to trigger two SCR's or a bi-switch (which is essentially two SCR's in a single package). The average power dissipation at 50°C is 1 watt with a peak current capability of 1 amp for 20 microseconds.

The dual trigger offers a particular advantage to the design engineer: It reduces the number of components required in a triggering circuit and thus improves the reliability of that circuit. In addition, the dual trigger reduces the overall cost of the triggering circuit.

Breakover voltage is quite symmetrical being within 5% of the nominal rating in either direction. Furthermore, the dual trigger is relatively unaffected by deviations in either ambient or operational temperatures. This is because the temperature coefficient is only 0.02%/°C.

The Mallory dual trigger is especially applicable to dense packaging because it utilizes a "cold case" design. This is a precision molded insulated case which exhibits very high humidity resistant qualities. Thus, the device may be applied to both commercial and industrial applications.

CHARACTERISTIC CURVE

TYPICAL LIGHT DIMMER

Amp-Gate* Diodes

The Mallory AMP-GATE* DIODE is actually a very low voltage regulator. The semiconductor junctions are a combination of forward biased p-n types in series. When the voltage across the diode is raised from zero, only a slight amount of current is drawn in the forward direction until the critical voltage is reached. At this point, the device goes into a high-conduction state. The nominal critical voltage at room temperature is 1.55 volts. However, as the temperature of the device increases, the critical voltage decreases 2mV/°C. Thus, the device exhibits a negative temperature coefficient. The operating temperature range is -35° to +100°C. and over this range the AMP-GATE DIODE operates as a highly efficient shunt.

These operating characteristics lend themselves ideally to fast-charging circuits for nickel-cadmium batteries. One of the disadvantages of nickel-cadmium batteries is that they can be permanently damaged if fast charging cycles are used. Until the development of the AMP-GATE diode there was no simple or economical means to start the charge rate at a high level and taper off the level as a full charge was reached. Now it is possible to construct a system where charging times can safely be reduced from 17 hours to as little as *one hour!*

A fast charging circuit utilizing the AMP-GATE diode requires a constant current power supply. In addition, each battery under charge must have the proper AMP-GATE diode connected in parallel with it. Since the AGD is sensitive to temperature, it is vital that the proper heat sink be used with the device. In order to determine the precise heat sink to be used, you must establish which battery is to be charged, the ambient temperature, end of charge voltage and current, and temperature rise in the AMP-GATE diode. This is a simple calculation, however it is necessary to have the proper nomographs. These are available without charge from Mallory Distributor Products Company, Box 1558, Indianapolis, Indiana 46206.

Characteristic curves and a typical circuit are shown in the illustrations below. Other applications are feasible. For further technical details, contact Mallory.

All above ratings based on 30°C ambient. Fan-cooled ratings based on air velocity of 1000 linear ft./minute. For resistive or inductive loads, as rated. For capacitive or battery loads, derate amperage 20%. Doublers, triplers, 3 phase half wave and 3 phase center-tap also available. Custom-built stacks, 24 hour service.

SCHAUER SEMICONDUCTORS

HEAVY DUTY 1 WATT ZENER DIODES

A 10 watt Silicon Junction in a 1 watt package for maximum surge capacity and stability. 25 watt-ms surge from 1.0 to 10ms.

Cool operation for maximum reliability and freedom from temperature drift and thermal fatigue. (Rated for a 100°C. junction temperature at maximum current.)

Mass-produced on automatic equipment for lowest cost and maximum similarity.

NOTE 3. Temperature compensated high voltage assemblies available.

SV1 Silicon Varistor as compared in size to 25¢ piece. Chart shows its vs E characteristics over four decades.

SCHAUER SV1 SILICON VARISTOR

SV1 Varistor consists of matched silicon junctions connected in parallel and oppositely poled. This voltage variable resistance goes through four decades of current for a half volt change in signal and makes possible its use as a single component to convert linear AC or DC information into logarithmic information following the curve $I_{ma} = e^{26(E-.59)}$ between the range $I = .02$ ma to 200 ma.

ELECTRICAL CHARACTERISTICS—Test limits: 50 microamperes max. at .2V D.C., 225 milliamperes min. at 1.0V D.C. Dissipation: $\frac{1}{4}$ watt at 25°C, $\frac{1}{4}$ watt at 100°C. Maximum $\frac{1}{2}$ cycle surge current, 25 amps. peak.

SV1 is encapsulated with an alkyd molding compound. An inner epoxy seal, long leakage paths, and high pressure molding assure reliable performance in all environments.

Dimensions of SV1 Varistor. Also applies to Schauer 1 watt Zener Diodes. Zener cathode terminal is marked by red dot.

JEDEC Silicon Avalanche Rectifiers

All of the silicon rectifiers listed below are supplied with avalanche characteristics as standard. They are direct replacements, electrically and physically, for ordinary silicon rectifiers, yet they provide important benefits to you and your products, at no extra cost.

Overvoltage protection is built into the rectifier. Transient voltage induced failures are virtually eliminated because these units avalanche at voltages well below the destruction point. The overvoltage spike is dissipated through the junction at a point below the critical voltage stress across the edge of the junction.

Lower circuit costs are readily achieved. When avalanche rectifiers are

used suppressor and balancing devices, such as resistors, capacitors, R-C networks, etc., are no longer needed. In addition, their elimination improves circuit reliability, due to a reduction in number of components and interconnections.

Dependable performance is assured. Over 10,000,000 of these devices already have been delivered and are in actual use in the field. They are now routinely available from high volume production lines.

All Tarzian Silicon Rectifiers are supplied with avalanche protection at no extra cost. For additional types, not necessarily covered by JEDEC numbers, see the following pages.

SARKES
TARZIAN

Silicon Avalanche Rectifiers

Tarzian Silicon Rectifiers with avalanche characteristics are available from 0.5 to 350 amps.

For information on the benefits and advantages of avalanche characteristics, see the previous page. A brochure describing these in detail is available directly from Sarkes-Tarzian, Inc., Semiconductor Division, Bloomington, Indiana.

SELENIUM "CENTER COOLED" RECTIFIERS

These standard power type rectifier stacks are used in a broad range of power supply applications, such as DC filament supplies, electroplating equipment, etc. Sarkes Tarzian "Center-Seal" rectifiers have high thermal stability. They will operate efficiently at temperatures from -55°C to +100°C.

*At reduced voltage. †Hermetically sealed. ‡Half-wave circuit; all others full wave. †Derate input voltage 50% for capacitive load.

STANDARD SILICON REPLACEMENT TYPES

Approximate voltage drop for all types listed below is 2 volts. Minimum series resistance required is 5 ohms for F-4, F-6, 40H and 60H; 10 ohms for M150 and 7.5 ohms for M500.

UNICIRCUIT[®] MONOLITHIC NETWORKS

- Semiconductor Integrated Networks Fabricated Within Monolithic Substrate Using Planar or Planar/Epitaxial Techniques
- Networks Available Include DTL Logic, Milliwatt RTL Logic, RCTL Logic, Compatible Modified DTL Low-power Elements, Utilogic Elements and Linear Circuits
- Unircuits With Temperature Range of -55°C to $+125^{\circ}\text{C}$ Meet or Exceed Requirements of MIL-S-19500D
- For Complete Technical Data Refer to Applicable Sprague Engineering Bulletins

CIRCUIT BOARD SNAP-ON HEAT SINKS

Types 140, 141 and 142 fit popular press fit diodes and SCRs as well as the JEDEC TO-8 case style. The cross slot design permits semiconductor cavity to expand cylindrically thus hugging the case diameter closely, ranging from .480 to .505.

Series 140 Heat Sinks provide thermal resistance as low as 10°C/w. A spring retention clip may be used in applications where cooling is critical and the very best thermal contact between case and sink is needed. MATERIAL is the highest thermally conductive commercially pure aluminum, 1100 alloy. FINISH: black anodize is standard but no finish parts are available from factory stock.

CIRCUIT BOARD COOLERS FOR TO-5 TRANSISTORS

Where space on the circuit board is at a premium, the new Type 150 Heat Sink requires only 0.375 in. height above the circuit board, this lightweight, economical Cooler has good performance characteristics with TO-5 cases; case rise 40°C @ 1 w with bright aluminum natural finish or 34°C @ 1 w with black anodize finish. Two #4 x 1/4" long sheet metal screws are used to solidly clamp the TO-5 case in the Type 150 Heat Sink. Three eyelets extruded from the mounting base provide keying to the circuit board. A sheet metal screw in the center eyelet anchors the Heat Sink to the board and the two outer eyelets are then set for permanent positioning. These coolers are provided without screws.

THERMAL RETAINERS FOR TO-5 CASES—WITH LOCKING SPRING 254LS

The TO-5 case style, including the Kovar header type, is best heat sunk at the bottom face of the flange since the silicon die is attached to the header. Series TR-254 Heat Sinks all provide this preferred contacting method. All five types are intended as thermal links from the transistor case to a cooler or to a chassis member acting as the heat sink. Type 254-SI has built-in electrical isolation with WAKEFIELD Delta Bond 152 Thermally Conductive Adhesive used to bond the Type 254-R to a stud. Type 254-LS Locking Spring is inserted behind the transistor. Type 120 Joint Compound should be applied to transistor header before insertion. MATERIAL: Zimac 3. Type 254-LS Locking Spring material: stainless steel. Stud material in Type 254-SI: 6061-T6 aluminum with gold iridite finish. FINISH: Nickel plate. Mounting hardware is not furnished.

THERMAL CLAMP FOR TO-1 CASES

For push/pull driver or low power output applications using TO-1 case style transistors, this versatile thermal clamp provides solid, economical retention of the cases to a chassis or heat sink. Two cases can be mounted in the Type 255 Thermal Clamp. 3°C/w per TO-1 transistor is obtained or 1½°C/w for both. Mounting centers are kept broad to better distribute the power from the two transistors across the chassis or heat sink. This also permits sufficient circuit board space for mounting components common to the transistors. #6 sheet metal or self-tapping screws can be used from the chassis thru the Type 255 Clamp. Or, #4 machine screws with nuts can be used from either direction. (Screws are not furnished.) MATERIAL: 1100 aluminum alloy. FINISH: none.

DELTA BOND 152 THERMALLY CONDUCTIVE ADHESIVE

An adhesive with high conductivity to be used: As a general adhesive — For bonding semiconductor to chassis heat sinks — Fabricating heat sinks or thermal links — For permanent bonding of all materials with highly thermal conductive interface. Delta Bond fills the need of a general purpose adhesive. It produces a rigid high strength bond to most materials when cured. Being 100% solid adhesive, it is effective on porous and non-porous surfaces such as metals, glass, ceramics and most plastics. The main features are high thermal conductivity, excellent dielectric strength and a coefficient of thermal expansion similar to that of aluminum and copper.

WAKEFIELD THERMAL JOINT COMPOUND

Improved thermal conductance from semiconductor to cooler may be obtained by applying a light coating of WAKEFIELD Thermal Joint Compound on the mounting surface. This Compound has a thermal conductivity approximately four times that of silicone grease.

MINIATURIZATION REQUIREMENTS

SPDT

MSTE-106
Series
Slim Bat
Handles

A waterproof series with a conservative 6 Amps rating. This thin profile switch features new turret lugs to simplify wiring. The highest standard has been attained in the miniature switch field.

"E" SERIES FEATURES
FOR SPDT, DPDT, 3PDT, 4PDT MODELS

Another "first" — the new "E" Series with the features most wanted in miniature switches. Repeatedly, ALCO-SWITCH seeks out the new, the different and the dramatic engineering departures that build better switch products — in fact, our "firsts" have made the ALCOSWITCH the best engineered and most used in the industry. By every comparison ALCOSWITCH stands alone as Number One, and with the introduction of the "E" Series it unquestionably has no equal for precision-made switches in production quantities.

ALCOSWITCH

DPDT

MSTE-206
Series
Slim Bat
Handles

Compact, 1/2" square, low loss case with solid silver contacts makes this switch ideal for critical applications. It's the "perfect switch" with new features in the same price field that has made ALCOSWITCH the leader.

"E" Series Features Continued

WATERPROOF — Neoprene "O" rings located inside the toggle and on the shoulder. Terminals permanently sealed.

NO TEAR-OFFS — A mechanical shoulder on the bottom of the bushing prevents "tear-offs" where one-nut mounting is employed.

VOLTAGE BARRIERS — A new case design features high voltage barriers between terminals inside as well as outside.

HIGH IMPACT CASE — New plastic material capable of withstanding a higher impact; guards against accidental damage.

LOW LOSS CASE — Features extremely high resistance between terminals and case ground.

HIGH TEMPERATURE CASE — Ideally suited for printed circuit applications — prolongs soldering time.

TURRET TYPE TERMINALS — New shape is employed for simplified wiring or for printed circuit use.

SOLID SILVER CONTACTS — Solid silver wide surface contacts bonded (not riveted) on copper-silverplated terminals.

6-AMP RATING — Conservative 6 Amps @ 125 VAC. Exceptionally high current capacity in a compact case.

LONG-LIFE CYCLE — Over 100,000 on-off operations at rated operating conditions (SPDT).

COLOR-IDENT CAPS — Model C-10 caps optionally available to simplify color identification.

STAINLESS OR GOLD — Available on special orders, ALCOSWITCHES can be made with stainless steel construction or with goldplated contacts and terminals, or both. Quotation on request.

Operating Force:

0.2 to 1.5 Kg

Life Cycle:

100,000 cycles (SPDT), 80,000 (DPDT),
20,000 (3PDT, 4PDT) of operation at a
rate of 25 to 30 cycles per minute at the
rated current. Temperature rise: below
56°C after rated switching operations under
environmental temperature of below 40°C.

Waterproof:

3.3 foot head of water for 30 minutes.
Waterseal: "O" ring waterseal between
handle and bushing, and between bush-
ing flange and mounting panel.

Temperature:

-50°C to 150°C for one hour (non-
operating).

Vibration:

10 cps to 55 cps. Shock: 50G's

Humidity:

Over 10 megohms after 96 hours at a
relative humidity of 90 to 95% and
temperature of 40°C.

Corrosion:

96 hour salt spray (density: 4%, temper-

Mustang
SERIES

3 & 4 Pole case sizes same as "E" Series

The MUSTANG series is for designers who prefer the feel of a standard toggle switch but have space limitations behind the panel. The Mustang case size is the same as the ultra-miniature MST Series, however the mounting requirements are the same as the standard switches with 1/8" bushings. This new Alcoswitch concept is popular in the 3 Pole and 4 Pole series where other non-miniature switches tend to be bulky in size. (See size comparison in photo)

ALCOSWITCH IS FIRST WITH A FULL LINE OF
MINIATURE ELECTRONIC SWITCHES

FIRST in ultra-miniature switches is the position of innovation and creative achievement which ALCOSWITCH has attained during the past ten years. Our broad experience and leadership is based upon the millions of ALCOSWITCHES being used today. Here, on these pages is ample evidence that ALCOSWITCH has specialized in miniature switches and originated many ingenious ideas to make engineering life more creative for the modern electronic industry.

Alcoswitch thinks MINIATURE... Alcoswitch thinks FIRST... CREATIVELY!

ALCOSWITCH

ALCOSWITCH

MANUFACTURED TO MEET
MINIATURIZATION REQUIREMENTS

ALCOSWITCH

With the coming of the space age, weight, size, precision, stability, and difficult operating conditions place a mighty "squeeze" on electronic design. Along with miniature circuit components, engineers have to fit switches into exceedingly small areas. Today, new materials, new manufacturing techniques, new components and new switches enter into the final engineering product requiring miniaturization.

As a result, modern **ALCOSWITCHES** have been created to reduce size and weight to a minimum and bear little physical resemblance to the older switches designed during the 1930's and 1940's. These **ALCOSWITCHES** are the new shape of miniature switching devices, not of the future, but what is currently available in quantity for laboratory testing and production use.

SPDT AND DPDT SERIES

A new **ALCOSWITCH SERIES** of high quality ultra-miniature toggle switches is ideally suited for limited space requirements. Conservatively rated at 5 amperes @ 115 VAC.

3PDT AND 4PDT SERIES

The feature of the one-piece body construction is to ultra-miniaturize the case size and still be consistent with good engineering specifications. In the switch mechanism, the toggle is linked directly to the movable contact member, providing positive make and break. The switch is designed to obtain positive detent action for improved "operator feel". Solid silver contacts and terminals are well-spaced for clearance, easy wiring, and good soldering ability.

ON-ON-ON

This unique switching arrangement is completely enclosed in a compact black phenolic housing, and in certain applications takes the place of a 3-position rotary switch. Features a slim miniature bat handle, solid silver contacts and terminals.

ENGINEERS: If dimensions or specifications are critical, obtain drawings from **ALCOSWITCH, Lawrence, Mass.**

SPDT

DPDT

Ultra-miniaturized **ALCOSWITCH** has an exceptionally high current capacity in a tiny case. The $\frac{1}{4}$ " thin toggle switch can be mounted in extremely close areas for aircraft and electrical equipment. Over 80,000 on-off operations. Solid silver contacts and terminals. Simple one-hole mounting.

SPECIFICATIONS

Insulating Resistance:
Over 1000 megohms @ 500 VDC.
Voltage Breakdown:
Over 1000 volts @ 60 cycles.
Life Cycle:
Well over 80,000 on-off actions.
Moisture Resistance:
Over 8 megohms after 48 hours at 40°C, and humidity of 95%.
Heat Resistance:
One Hour @ 140°C.
Case Material:
Black phenolic resin.
Contacts and Terminals:
Solid silver.
Bushing Size:
Standard $\frac{1}{4}$ -.40, usable up to $\frac{1}{4}$ " panel thickness.

*Center terminal brass with silver plate

Combines high capacity, ultra-miniature size and long life with **ALCOSWITCH** precision. Rated at 5 amperes @ 115 VAC. Contacts and terminals are of solid silver. $\frac{1}{2}$ " sq. case size makes it ideal for miniature equipment with critical applications and rear panel space limitations.

COLOR-CODED CAPS

The revolutionary feature of color-coded plastic caps for toggle switches has already proved to be an invaluable aid in aircraft installations and hazardous applications. The MST-115D, 215N, 315D, 415N switches are normally stocked ONLY WITH WHITE CAPS. Black, Blue, Red, Gray, White caps may be purchased separately for use on all our slim bat handle switches for color identification. When ordering — specify color.

DP3T ON-ON-ON

New ON-ON-ON toggle switch made for applications where the Center-ON position is desired. The DPDT circuit is designed to have "ON" positions at opposite sides of the lever throw with the Center-ON operational when either circuit is used. 3 amperes @ 115 VAC. Ultra-miniature size is only 1/2".

SPECIFICATIONS

Initial Contact Resistance:

Below 20 milliohms at 2-4 VDC, 1 amp.

Insulating Resistance:

Over 1000 megohms between terminals and case ground @ 500 VDC.

Voltage Breakdown:

1000 VAC between terminals and case ground for a duration of one minute.

Life Cycle:

Well over 15,000 on-off switching actions at rated current.

POSITIVE ACTION MINIATURE MILITARY SWITCHES

"Small As A Dime"

Especially designed for aircraft, missile and electronic applications.

EXTREMELY COMPACT—Highly reliable power or dry circuit switch, usable as a pre-set switch in aircraft recognition systems, for walking talkies, electronic instruments and communication systems.

NEW DESIGN—Toggle is linked directly with movable contact member, insuring positive make and break.

NEW TOGGLE LEVER SEAL—Protects switch enclosure under adverse environmental conditions; includes panel bushing seal.

NEW GOLD PLATED CONTACTS—Open and close with wiping action, for good contact even on low energy circuits. Contact bounce is extremely low.

NEW SUPERIOR MATERIAL—In molded parts, provides higher arc-tracking resistance and excellent recovery voltage.

NEW POSITIVE DETENT ACTION—For improved operator "feel."

Single or multi wafer switches designed for applications where a large number of control circuits must be controlled in consecutive steps. All terminals marked with two-digit number. The first digit denotes the wafer position, moving from front to rear of switch. The second digit indicates radial position of the terminals moving in a clockwise direction from the keyway. Terminals numbered 11, 21, 31, etc. are the common or line terminals on most switches and are also marked "off." On MS25002 type switches, the adjustable indexing mechanism provides a flexible arrangement of different circuits. By positioning two screws in the indexing plate on the base, stop positions can be provided to fit specific applications. Completely universal, can stop at any position. Additional variations of listed switches obtainable upon request. Can be furnished with 1 up to a maximum of 6 wafers each with 8 positions, 7 "on" and 1 "off." 42 circuits can be controlled by one 6 wafer 8 position switch, $\frac{1}{16}$ inch bushing.

MAGNETIC PROXIMITY SWITCHES

Precision, fast-acting devices, adaptable to sequential control functions on machine tools, packaging, material handling and equipment or for similar industrial devices. Rugged construction, encapsulated to assure freedom from contamination by cutting oils, dust, powder, metal chips, etc., this series will operate up to hundreds of millions of cycles at temperature ranges from -30°C to +105°C. Switches will actuate when brought into proximity with ferrous metals or other magnetic materials. Operating sensitivity in nom. $\frac{1}{4}$ " make, $\frac{1}{2}$ " break. No mechanical linkage is required for operation. Typical actuators include rotating cams, wheels and indexing tables, reciprocating arms, push rods, die sets, jaws and assembly line objects such as food and beverage cans, stampings and components. Speed (max.): 200 cycles/sec., repeatability within .005". Switch elements are hermetically sealed in glass, then unit is potted in epoxy resin. Case is special rubber and plastic compounding which is impervious to oil, water, gas and all common solvents.

COUNTING—POSITION LIMITING—SEQUENCE CONTROL HERMETICALLY SEALED—MOUNTS IN ANY POSITION—NO MECHANICAL LINKAGE NECESSARY.

ELMENCO

CAPACITORS

FUSED PLUG

PROTECTS ALL ELECTRICAL APPLIANCES

Offers complete protection against current surges & short circuits

REDUCES FIRE HAZARDS

The Elmenco Fused Plug is like any standard plug, is light in weight, but easier to handle because of finger grips. However, it employs 2 small fuses which provide complete protection against damage to the appliance and to the main line. The blown fuse is easy to remove and simple to replace. Fits any standard wall outlet.

NEW MARKETS! GREATER VALUE!

Approved by Underwriters Laboratories and used by many of the largest manufacturers of radio and electronic equipment, battery chargers, washing machines, curling irons, lighting equipment, automatic relay equipment, motors of every description, and practically every other type of product that consumes electricity. Every wired home, office and store is a prospect.

IMPACT RESISTANT COVER

plus SPRING ACTION for positive contact

New spring action design of the male blades assures 100% positive contact regardless of worn condition of wall outlet.

Fuses are replaced instantly without need of opening plug. Can be used with standard 3AG and 3AB glass tubular fuses up to 20 amps.

REPLACE FUSE INSTANTLY!

RECOMMENDED BY THE
BOARD OF FIRE UNDERWRITERS

Conveniently packed 10 to a Box in colorful self-merchandising displays. Easy to handle for resale.

BUSS Fuses

FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

for Protection of TV, Radios, Instruments and Electronic Equipment

FUSETRON FIBRE TUBE FUSES

$1\frac{1}{32} \times 1\frac{1}{2}$ inch

Dual-Element — Slow Blowing Type. Avoid needless blows from starting currents or surges. Have fuse link that operates only on very high overloads or short-circuits, and thermal cutout on low overloads. Thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is provided against short-circuits or continued overloads.

Test specification—carry 110%, open at 135% within 1 hour.
Approximate blowing time: at 200% load 25 seconds,
at 300% load 8 seconds,
at 500% load 5 seconds.

SIGNAL OR VISUAL INDICATING TYPE

FNA are FNM Fusetron fuses with silverplated indicating pin that extends from fuse when fuse blows. Pin can also be used to actuate a signal by using fuse in BUSS Signal Fuse Block. Fuses in sizes larger than 10 ampere have a dual tube construction. They can be used in BUSS Signal fuse blocks but not in the HPC-C fuseholder.

BUSS FUSES 600 Volt. UL Listed. $1\frac{1}{32} \times 1\frac{1}{8}$ inch.

Fuseholder for BBS fuses. Use HPC-L fuseholder or No. 3845 single pole, side barrier porcelain fuse block. Only BBS fuses (or others with exact same dimensions) will fit these holders. This assures replacement of proper size fuse.

BUSS Insulated TWIN-CLIPS

For $\frac{1}{4}$ inch FUSES.

Make it easy to replace blown pigtail fuses without cutting or unsoldering pigtails. Just snap Twin-Clips on blown fuse and insert ordinary or Fusetron fuse of same amperage as blown fuse.

Strong spring clip pressure assures good contact.

No. 3434 BUSS Insulated Twin Clips One pair \$0.24

HIGH INTERRUPTING CAPACITY FUSES

$1\frac{1}{32} \times 1\frac{1}{2}$ inch

Glass fibre melamine tube with sand filler surrounding a silver fuse element. For use on circuits capable of delivering currents as high as 100,000 amperes at voltages of 600 or less. AC only.

TRON PIGTAIL FUSES

Sub-miniature — hermetically sealed — visual indicating
Tron fuses can easily be incorporated into miniaturized devices or components without sacrifice of space. Designed for installation in high shock and vibration ambients.

They may be potted or encapsulated. Are self-protecting and operate without exterior flash or venting. Glass tube construction permits visual inspection of element.

Available in ratings from 1/100 to 15 amperes — for use on circuits of 125 volts or less where available fault current is not over 50 amperes. Color coded to indicate ampere ratings.

Made with 1½ inch axial pigtail or with 1 inch right angle pigtails. Leads are of No. 24 tinned copper wire for ratings 1/100 thru 5 amp. — No. 18 tinned copper wire for ratings 7 thru 15 amp.

Test specifications:
Characteristic A — Carry 100% load, open within 10 seconds at 200% load.
Characteristic B — Carry 100% load, open within 10 seconds at 150% load.

BUSS GMT Fuses — HLT Fuseholders

Signal Indicating

Alarm Activating

For multiple circuit apparatus where space is at a premium

GMT fuses and HLT fuseholders permit multiple mounting of fuses in limited space, for protection of communication equipment, business machines, computers, control circuits or any equipment operating at 300 volts or less.

Holders take panel mounting space of only ¼ inch horizontal by 1½ inches vertical.

Fuses give visual indication when blown by release of a spring indicator. The spring carries a colored plastic flag, in a different color for each fuse ampere rating.

The indicator spring when released makes contact with an alarm terminal in the fuseholder, which can be connected to activate a signal circuit.

Blown fuses are readily replaced without use of insulated tools. When mounted on minimum centers, removal of fuse is easy by use of a wire hook.

BUSS SHIELDED FUSEHOLDERS

Prevent Radio Frequency Interference

Installs quickly as an ordinary fuseholder. For use where fuse and fuseholder could pick up radio frequency radiation and interfere with circuit containing fuseholder — or other nearby circuits.

Fuseholder accomplishes both shielding and grounding. Eliminates need for placing grounded metal shield around fuseholder.

Fuseholder meets MIL-1-6181D for interference control and MIL-F-19207A covering such environments as salt spray, humidity, shock and vibration.

Current carrying capacity; 30 amperes at any voltage up to 250.

BUSS Fuses

FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

for Protection of TV, Radios, Instruments and Electronic Equipment

BUSS In-the-Line or Panel Mounted FUSE and HOLDER COMBINATIONS

For voltages up to 300

Safeguards against use of wrong type and size of fuse. Fuse and knob are in one piece — when fuse opens, entire fuse-knob assembly is replaced.

Fuseholder can be mounted in-the-line — or panel mounted for which a snap-in steel clip is available for mounting on any panel $\frac{1}{8}$ to $\frac{1}{16}$ inch thick.

Holders come with 6 inch leads of No. 18 solid copper insulated wire, unless specified otherwise.

HLR holder safeguards against use of wrong type of fuse — (takes all ampere sizes of GLR and GMF fuses)..... List Price \$0.25

HLQ holder is size limiting type and is made in 6 fuse ranges. Takes either GLQ or GMQ fuses up to the largest ampere size marked in holder28

SPACE SAVER Panel Mounted FUSEHOLDER

For $\frac{1}{4}$ x $\frac{1}{4}$ inch fuses or $\frac{3}{32}$ x $\frac{1}{4}$ inch fuses

A compact, space saver fuseholder only $1\frac{1}{8}$ inches long — extends just $2\frac{1}{2}$ inches behind front of panel.

Takes $\frac{1}{4}$ x $\frac{1}{4}$ inch fuses and can easily be converted to take $\frac{3}{32}$ x $\frac{1}{4}$ inch fuses simply by changing the screw type knob.

Knob is designed for easy gripping even with gloves.

Fuseholder is of molded phenolic and will withstand sever vibration, shock and other environmental conditions.

Neoprene washer and zinc plated, chromate dipped steel fastening nut furnished with each holder.

Normal current carrying capacity; 15 amperes for any voltage up to 250. U/L listed.

BUSS Add-On Fuse Blocks

for $\frac{1}{32}$ x $\frac{1}{2}$ inch Fuses

Single-pole fuseblock and separate end barrier assemble into unit of one or more poles. Units lock together. New poles can be added to either end of existing block. Made of molded phenolic. Marking strips to identify each circuit available.

Type	Description	List Price
3742	End-Barrier Only	\$0.18
3743	One-Pole Block Only	1.25
Marking Strip in 50 inch length		.61

When ordering, specify number of end barriers and one-pole blocks desired. Only one end barrier needed for each assembled fuse block of any number of poles.

BUSS STANDARD FUSE BLOCKS

Available from 1 to 12 poles. Have laminated black phenolic base. Clips of strong spring, Albaloy plated, highly resistant to corrosion with great gripping strength. Types 3823 and 3828 have solder terminals firmly seated in small base. Type 3833 has screw terminals on full base that provides ample insulation around terminals.

Other standard and special fuses, fuse blocks, fuse clips and fuse holders

If the fuses, fuse blocks, fuse clips and holders shown do not fit your requirements ask for information on other types.

Fuses and fuse mountings to meet JAN and Military

specifications also are available.

If you have a special problem in protection send description or sketch giving number of circuits, type of fuse, terminals, etc., desired. We welcome such inquiries.

LIMITRON FUSES

For Protection of Semi-Conductor Rectifiers

Another Outstanding Development by the Makers of BUSS Fuses

These Limitron fuses are especially designed for the protection of semi-conductor rectifiers. They provide extremely fast opening on overload and fault currents, with a high degree of restriction of the let-thru current.

If each diode is protected by a Limitron fuse, the fuse will open very quickly when the current drawn exceeds the rating of the diode.

Thus when a short-circuit occurs in a diode the fuse opens and takes that diode out of the circuit. This protects other good diodes in the rectifier which might otherwise be damaged.

For time-current characteristic charts ask for BUSS bulletin HLS.

Test specification for all types of BUSS rectifier fuses — carry 100% of rating open at 1000 seconds on overloads between 120% and 180% of rating; open within 1 second at 250% of rating.

Miniature Switches, Parts

SERIES PA-2000 1 1/4" DIAMETER CERAMIC SWITCHES

Insulated with steatite (grade L-422 or better per MIL-I-10A); only 1 1/4" dia. (3/4" smaller than standard switches). Same ratings as larger switches. Features maximum voltage flashover; high Q, low loss steatite body; minimum intercut capacity; insulated front-back clips. Metal parts**, except clips and contacts. Rated: 2.75 amps, 15 v. DC, 230 ma, 115 v. AC, make-break resistive load. Breakdown, 1500 v. AC rms between critical parts. One-piece shaft for accurate indexing. Adjustable stop or continuous rotation mtg. using single hole with locating lug. Busting 1/4"-32 thread, 3/4" long. Shaft, full round 1/4" dia., x 2 1/4" long from mtg. surface. With mtg. nut, lockwasher and knob. Shpg. Wt., 3 oz. per section.

For switches to meet military specifications, write for prices and information.

**Suitably plated to resist corrosion.

SERIES PA-1000 1 1/4" DIAMETER PHENOLIC SWITCHES

Insulated with type PBE laminated phenolic per MIL-3115-B. Same size as PA-2000 ceramic switches. Rated: 2.75 amps, 15 v. DC, 230 ma, 115 v. AC. Breakdown, 1000 v. AC. Positive, adjustable stop or continuous rotation; 30° or 60° detents available. With knob. Shpg. Wt., 3 oz. per section.

Military specifications available as above.

SERIES PS $\frac{1}{16}$ " SUBMINIATURE ROTARY SWITCHES

blue, ceramic insulated rotary switches that are ultra-small. Weigh less than 1 oz. each, yet ive the same electrical ratings as switches much heavier and larger. Ideally suited for nd switching, transistor circuits, aircraft instruments, etc. Insulation is Dow-Corning 200 licone treated steatite (grade L-422 or better per MIL-I-10A). Size: Ceramic sections, $\frac{1}{16}$ " ick spaced $\frac{1}{4}$ " apart with ceramic spacers; spacing between front plate and first section, $\frac{1}{16}$ ". Hardware except clips, contacts, and index spring are steel. Mounting: Single hole with lated locating lug on $\frac{3}{8}$ " radius. Bushing $\frac{1}{4}$ " 32 thread, $\frac{1}{4}$ " long. Shaft $\frac{1}{16}$ " dia. x $\frac{1}{4}$ " lg. long; led: Make and break, resistance load, 550 amp at 28 volts DC, 170 milliamperes at 115 v. AC. dex: Positive 30°; fixed stop.

CENTRAL SWITCH KITS

STANDARD KITS (FIG. A)

Convenient, ready source of stock sections, indexes and hardware. Packed in heavy gauge steel, 8-drawer Coultis cabinet, 23 1/2" w. x 9 1/2" h. x 12 1/2" d. with blue, baked enamel finish. CRL No. SWK-810 Kit—PA-1000 series miniature phenolic parts: 106 pieces of $\frac{1}{16}$ " dia. phenolic sections, 32 index assemblies with spacers, nuts, washers, knobs and dial plates. Makes up to 32 regular or special switches. Net Each \$177.00

CRL No. SWK-820 Kit—PA-2000 series miniature ceramic parts: 102 pieces of $\frac{1}{16}$ " dia. steel sections, 32 index assemblies with spacers, washers, nuts, knobs and dial plates. Makes up to 32 regular or special switches. Net Each \$210.00

JUNIOR SIZE SWITCH KITS (FIG. B)

Packed in attractive light blue and gray 4-drawer steel cabinets 10 1/2" w. x 11 1/2" x 10". With balanced stock of index assemblies and separate sections for every application.

CRL No. SWK-410 Kit—PA-1000 series miniature phenolic parts: 48 phenolic $\frac{1}{16}$ " dia. sections, 13 index assemblies and hardware for making 13 phenolic regular or special switches. Net Each \$73.00

CRL No. SWK-420 Kit—PA-2000 series miniature ceramic parts: 52 ceramic $\frac{1}{16}$ " dia. switch sections, 13 complete index assemblies and hardware for making 13 ceramic regular or special switches. Net Each \$95.80

CUSTOM SWITCH KIT (FIG. C)

Contains parts and tools necessary for any prototype designer to construct the special switch he needs. Packed in metal cabinet, set up and ready to use. Makes 25 four-section miniature rotary phenolic or ceramic switches with factory precision. Contact nibbling tool can cut any contact arrangement you need. CRL No. PK-20-S Kit—Complete. Net Each \$200.00

*Momentary contact.

△Rated 1/2 hp — 250 V. A-C. Both 8326 and 8329 are nest mounted.

When ordering, specify (1) catalog number, (2) width of spade terminals and (3) poles and throws.

PUSHBUTTON SWITCHES

ONE HOLE MOUNTING—A-C, D-C AND A-C ONLY TYPES

Bushing dia. 1 $\frac{1}{32}$ ". Bushing length; 8411—1 $\frac{1}{4}$ ", 7190 and 7196—1 $\frac{1}{2}$ ", all others 1 $\frac{1}{8}$ ".

All switches are momentary contact type except 7208 and 7206 which are push push type.

8442 and 8444 have standard 1 $\frac{1}{32}$ " button.

Also available with short 1 $\frac{1}{4}$ " button.

① Part numbers listed in Navy MIL Std. 242E (Navy).

② These switches are listed in NAV. SHIPS HANDBOOK of miniature parts for Electronic Equipment—Navy Ships 0967-031-1000.

③ These switches are built to MIL-S-8834 requirements but are not approved to MIL-S-8834 and MS93010. Submitted for approval November, 1965. Check latest QPL 8834 or Cutler-Hammer for latest status.

④ Small lever switch with keyway is built to MIL-S-8834 requirements, except "without lever seal".

Note—The values shown for multi-pole switches are amperes per pole except for motor load. See below.

Note—Current ratings are established at 77° F.

Note—All current ratings good to 50,000 Hertz. For higher altitudes check local C-H office.

Note—AC current values good for frequencies from 50 to 400 cycles (except "A" in Ctl. 25 is 20 amp. at 50-60 cycles).

*Mandatory contact.

① These figures are maximum current ratings for 10,000 operations. Longer life (more operations) can be expected when operated at less than rated voltage.

② Motor load values for multi-pole switches are based on all poles of switches being connected in motor circuit and motor stalled current not exceeding 300% of normal running current.

Experience has shown that for voltages not in excess of 250, the current rating of aircraft switches is inversely proportional to the voltage. If the voltage is doubled, the rating is halved.

Therefore, if the 125 volt ac rating of a switch is known, it follows that on 200 volt ac, the current rating is 125/200 of 62.5% of its 125 volt ac rating.

This rule also applies to two or four pole switches used on polyphase systems. Cutler-Hammer aircraft switches carry per pole ratings and if the current and voltage handled by each pole is known, different rating combinations can be worked out. A double pole switch, however, at least twice the replacing capacity of one of its poles because there are twice the number of breaks in the circuit. Its life is only slightly more than that of one pole because breaks are not simultaneous. The first pole or break handles twice its normal rating resulting in rapid erosion of contact material.

The switches listed on these pages represent only a small fraction of the total number of small motor and appliance switches manufactured by C-H. Contact your local Sales Office or Distributor for more complete listings.

**MAGNETIC PROXIMITY SWITCH****For Counting Position Limiting Sequence Control Mounts in Any Position**

Precision, fast acting, suitable to sequential control functions on machine tools, packaging, material handling, and similar industrial devices.

Strong, encapsulated, assures freedom from contamination by cutting oils, dust, powder, chips, etc. Operates up to hundreds of millions of cycles — temperature range —30°C to +105°C. Speed (Max) 200 cycles/sec. repeatability within .005".

Switch actuates when exposed to proximity with ferrous metals or other magnetic materials. No mechanical linkage necessary for operation. Operating sensitivity on min. 1/4" make, 1/4" break. Switch elements sealed in glass, unit is potted in epoxy resin. Case is impervious to oil, water, gas, all common solvents.

Typical actuators include indexing tables, cams, wheels, push rods, die sets, line objects such as food and beverage cans, components, parts, vehicles, rotating and swinging objects, etc.

- INSTRUMENT AND TESTER TYPE • 14- AND 20-POSITION
- SINGLE AND MULTI-DECK • MILITARY OR COMMERCIAL

MS-14-1 Molded

Molded — Molded models have all moving contacts enclosed to minimize dirt and corrosion.

14-Position: 13 circuits and "off" per deck in 2" circle (SS-14), or 2-3/32" circle (MS-14) with 25° 43' angular indexing. Supplied individually boxed with 1-1/4" Bar (KN-16), not on bulk orders unless specified. For details, SS-14, 1 to 6 decks, Print SK-116 Rev. B. MS-14, 1 to 6 decks, Print SK-111 Rev. D, 7 decks and over, SK-112 Rev. C.

20-Position: 19 circuits and "off" per deck in 2-3/32" circle (SS-20) or 2-5/8" (MS-20) with 18° angular indexing. Supplied individually boxed with 2" Bar (KN-16), not on bulk orders unless specified. For details, SS-20, 1 to 6 decks, Print SK-116 Rev. A. MS-20, 1 to 6 decks, Print SK-113 Rev. D, 7 decks and over, SK-114 Rev. C.

Commercial Variations: Special switches too numerous to list now are made. Typical are: laminated models with 14 or 20 live positions, no off, noted by suffix F as in SS-14-2F or SS-20-1F. Inquiries are invited.

BONDED RUGGEDIZED TYPES As indicated in the table, all molded rotary switches may be ordered with bonded construction as MS-14B or MS-20B types. Cured laminations for ruggedization, shockproofing and further enclosure. Additional dependability factor adds only approx. 1/64" and 35¢ catalog price per deck.

MS-20-1-6DT
Double-throw Switching
of 6 circuits per deck

6-POLE DOUBLE-THROW PER DECK —

1 or 2 DECKS (DT Series). Widely used for simultaneous double-throw switching of 6 circuits per deck (18° throw). Fully enclosed — illustration shows protective cover cut-away. Circuit arrangement printed on switch front. If DTS Shorting Type, 1500 VAC R.M.S. between contacts and ground, 1000 VAC R.M.S. between contacts. See MS-20-1-6DT, MS-20-1-6DTS, and MS-20-2-6DT in table.

MULTI-POLE AND LEVER TYPE SWITCHES

J-B-T INSTRUMENTS, INC.

NEW MULTI-POLE MOLDED ROTARY SWITCHES, SERIES 20M.

- Superior Molded Material
- All Models Bonded & Ruggedized
- Panel Seal Available

Front View Showing Panel Locator which is Normally at 3 o'clock Position.

Rear View with Back Cover Cut Away to Show 4-Pole Construction with 4 Live Switching Contacts.

Although the new 20M-Series is 1/4" longer behind the panel than the 20-position molded switches described on the preceding page, the two styles are otherwise interchangeable in dimensions. Providing 19 live positions and off, the 20M-offers these additional features:

1. **Increased Versatility of Circuitry**—up to and including four poles per deck;
2. **Upgraded Insulation Resistance and Dielectric Qualities**—by use of melamine stators and rotors (or other MIL-M-14 molded materials when specially ordered);
3. **Built-in Panel Locator or Non-Turn Device**;
4. **Extended Switch Life**—new contact design with rotor brushes of phosphor bronze heavily silver-plated;
5. **Bonded and Ruggedized Construction**;
6. **Radial Alignment of Multi-Pole Contact Surfaces**—by means of newly-designed double-ball detent with diaphragm-type springs.

VARIATIONS OF 20M—Please request SK-142 for full dimensions and circuit diagrams. Besides the condensed listing in the accompanying table, various combinations of **shorting and non-shorting contacts** for each deck may be made. **Fixed stops** are built-in but may be provided for single-pole switches when specially ordered. **Over six decks** can be supplied for a reasonable number of poles; extra decks add 5/16" per deck and 5/16" per switch for rear support SU-3. **Ring-contact** (suffix R) may be specially ordered.

PANEL SEAL PS20M-SERIES—Sealed shaft and bushing meet the requirements of MIL-S-3786A for sealing. For details ask for SK-143. The seal (prefix PS) adds \$1.75 per switch to catalog price.

* See MS-20 drawing on preceding page for location of positions.

Notes: (1) Non-shorting (N) type — (break-before-make) — is shown. For shorting type (S), add \$.05 per pole per deck to catalog price. Example: 3 pole, 3 deck 20M-3053S is \$8.95.

(2) Switch with all live positions per pole or less than maximum live positions can be provided by fixed stops.

(3) Off position is in extreme ccw position from knob end.

(4) **Panel Seal** is available including shaft seal within bushing. Use suffix PS. Example: PS20M-1203N. See Print SK-143.

LEVER ACTION SWITCHES — 6, 5, 4, 3, and 2-Position — LAMINATED, MOLDED, & SUB-MINIATURE

LAMINATED 3- AND 4-POSITION, POSITIVE INDEXING. Derived from J-B-T SS-14 instrument-type rotaries, these switches are specified for inspection equipment, communications systems, control consoles, and similar uses. 4-position are interchangeable with 3-position except in length of throw—mounting holes for both, 1 1/8" between centers. Individually-boxed switches come with KN-17 knob; bulk shipments, without knobs. **SINGLE DECK**—spacing between centers: recommended, 3/4"; minimum, 9/16". **TWO DECK**—spacing: recommended, 15/16"; minimum, 13/16". 3/8" between decks matches TV twinlead wires. **SPRING RETURN TYPE**—single deck, 3-position only; lever returns to position 1, giving momentary action at positions 9 and 10. For dimensions, ask for drawing SK-138.

Two-Deck Lever Action Switch
SS-14-114F-2

Molded 5 or 6 Position Lever Switch

MOLDED 5- AND 6-POSITION, POSITIVE INDEXING. 5 or 6 live positions, two circuits per deck, in enclosed lustrous black molded construction, adapted from the MS-20 series with electrical characteristics as shown on previous page. These models can simplify circuitry for sound systems, control, inspection, test, experimental, and hobby purposes. Individually-boxed switches come with KN-20 threaded black molded knob; bulk shipments, without knobs. For mounting data see SK-64, Rev. H on 5-position and SK-119, Rev. B on 6-position.

MIL Materials Throughout for Military & Non-Military Applications

CAUTION — MIL-S-3786B, a sophisticated specification, spells out more than one performance level in each of several categories such as Temperature, Life, Vibration, Shock, and Altitude. Each level is designated by its own symbol. J-B-T SR05 models meet an exceptional number of levels.

USES — For test equipment, airborne and transistorized equipment, geophysical apparatus, and other miniaturized electrical and electronic devices.
NO BASIC SERIES — Full 12 live switching contacts per deck are available in Series 7000 using a patented wafer design feature where rotor contacts are on the front, and switching contacts are on the rear of the same deck. 1 to 4 poles per deck 1 to 6 decks, standard.

Up to 8 poles per dual-duty deck are available in Series 5000 which has up to 12 contacts including common on the front, and up to 12 contacts including common on the rear of the same deck. 1 to 4 poles on each side of dual-duty decks; 1 to 4 decks, standard.

THREE ROTARY TYPES — Both Basic Series are made in 3 types: **MILITARY STYLE SR05**, numbered for specific performance levels of MIL-S-3786B; **V TYPE**, of similar construction to SR05, but not ordinarily subjected to full military test procedures; and **X TYPE**, using the same materials as V type switches, but intended as replacements for previous models or as original components for non-military versions where requirements are similarly exacting.
EVER SERIES (L Types) — Made as VL-7000 or VL-5000 Series, 1 to 4 decks. Illustrated on preceding page.

NOBS — Supplied with individually boxed switches in V and X types; not supplied on SR05 because separate military specification applies.

DIFFERENCES BETWEEN SR05 MILITARY, V, and X
— Switches other than X types use extra rugged index mechanisms and rotor construction.

* Typical MIL-S-3786B complete number is V-71121N-SR05N30C3MGC, unless specifically ordered otherwise. Temperature-Life Characteristic C also qualifies for Characteristics A and B; Vibration Grade Symbol 3 also qualifies for Symbols 1 and 2; Shock Type M, medium impact, normally supplied. Shock Type H available on some models when so ordered. Altitude C covers up to 70,000 ft, also meets Characteristic O (up to 10,000 ft.)

SPECIFICATIONS & TEST DATA ON SR05 MILITARY STYLE

NOTE: Most of the values shown here are given in the Specification and do not indicate the extent to which the test results of J-B-T switches were more favorable.

Current-carrying capacity: 5 amps at standard ambient conditions.

Current-breaking capacity: 750 MA at 30 VDC; 300 MA at 120 VDC; 1 AMP at 115 VAC

Non-inductive.

Initial Contact Resistance: .005 ohms max.

Contact Resistance: To MIL-STD-202C, Method 307, which requires Initial — 10 milliohms; After Moisture Resistance Test — 15 milliohms; After Life Test — 20 milliohms.

Materials: Terminals (double-wiping): gold-plated 90% silver alloy. Rotor Contact: J-B-T #1800 Silver Alloy. Shaft & Frame: Stainless steel, passivated.

Insulation: Wafer, glass epoxy laminate to MIL-P-18177C Type GEB, NEMA G-11; Rotor, ceramic to MIL-I-10A, Grade L-623.

Life Rotational: Temperature-Life Characteristic C, 25,000 rotational cycles at 10 cpm, Temperature —65°C to +125°C; 25,000 cycles at 70,000', room ambient temperature.

Vibration: Grade 3 of Table III MIL-S-3786B, 10 to 2000 cps. Tested in accordance with MIL-STD-202C, Method 204, Test Condition B.

SHOCK: Shock Type M, Medium Impact per Table IV, MIL-S-3786B. Tested in accordance with MIL-STD-202C, Method 205. Mating contacts did not open for more than 10 micro-seconds. Shock Type H, High Impact, Method 207, specifies not more than 5 millisecond contacts and does not automatically cover Type M impact.

TOGGLE SWITCHES — HEAVY DUTY

J-B-T INSTRUMENTS, INC.

SINGLE-, DOUBLE-, AND 4-POLE — MIL, AN, AND JAN TYPES

Series MS25068, MS35058, and MS35059 to MIL-S-3950B Series ST40A-H, ST42A-H ST50K-T, ST52K-T to JAN-S-23, MIL-S-21195A (Ships), or DDAX Drawings

WHY IT PAYS TO SPECIFY J-B-T

J-B-T concentrates on trouble-free switches. Among its six families of toggle switches J-B-T produces more than 170 models made to Government Specifications. Market studies indicate that while these switches are a must in military applications, almost half are produced for non-military use where the principal requirement is dependability. J-B-T apparently is specified because:

1. **Materials are good.** For instance, J-B-T is the only manufacturer of MIL and AN heavy-duty models regularly using solid coin silver contacts and rocker arms — to add overload protection and keep contact resistance under .005 ohms.

2. **The design is good.** All MS models have silicone rubber bushing seal for sand, dust and 15-foot head of water submersion test. Medium-duty types MS25068 and MS25100 also feature cast terminal sealing and a new design which provides fast break and wider gap to surpass the 125 VDC endurance tests of MIL-S-3950B.
3. **The value is good.** The many features required to meet Government standards, and J-B-T's rigid in-plant testing pay off in long useful life. Nevertheless, because J-B-T makes only quality switches quantity production permits a surprisingly small price differential over run-of-the-mill types.
4. **Deliveries are relatively good.** See your distributor. Production is scheduled to back up his stocks with factory inventory of finished switches and work in process to meet predictable demand.

MS35059-27 DPDT Lever Seal

MIL-S-3950B SERIES — Single-pole MS35058 with suffix —21 and above, and double-pole MS35059 types with suffix —21 and above are recommended when maximum reliability is required. Temperature, endurance, and altitude requirements exceed earlier MS types (suffix —1 to —19), AN3021 and AN3027 switches to MIL-S-6745, and ST styles to JAN-S-23 and MIL-S-21195A(Ships). All MS switches contain a silicone rubber bushing seal to meet sand and dust and 15-foot head of water submersion tests.

NOMINAL RATINGS: 20 Amp. at 125 VAC, 10 Amp. at 250 VAC.

SIZE: Single-hole; bushing 15/32" 32NS-2A by 15/32" high; toggle lever 11/16" long. Bodies including terminals: SP: 1-1/8" x 5/8" x 1-1/16" deep; DP: 1-21/64" x 3/4" x 1-1/32" or 1-13/64" deep.

TERMINALS: MIL-S-3950B switches have solderable 6-32 screw terminals; ST40's and ST50's, screw terminals; ST42's and ST52's, solder lugs.

OUTSTANDING 4-POLE SWITCHES TO MS25068 REQUIREMENTS

MS25068-27 4-pole DT Lever Seal

• There is no mistaking the light brown color and silver printing of these distinctive J-B-T 4-pole heavy-duty switches. The superior molded body, chosen after extensive tests, features high arc resistance and low shrinkage. As a result the switches exceed the rigorous electrical endurance requirements of MS25068. Equally important, the internal construction uses rocker arms and contacts made of solid coin silver (not clad or brazed). The 8 models listed here have silicone rubber bushing seals and solderable 6-32 screw terminals, the same as other heavy-duty J-B-T MS switches. Dimensions same as MS35059 above except bodies including terminals: 1-11/32" long, 1-9/16" wide, 1-9/32" deep.

• **MEDIUM DUTY** describes the current-carrying capacity—nomically 6 amp. at 125 VAC, 3 amp. at 250 VAC—rather than the life characteristics. Self-wiping heavily silver-plated double-grip contacts provide exceptional reliability. Typical uses: instruments, data processing, and communications circuits.

NEW DESIGN FOR MS25098 & MS25100—Significant internal changes now provide fast break, wide gap, and increased insulation values, to surpass the severe endurance tests of MIL-S-3950B. For example, after 20,000 cycles of operation at 65,000' altitude with resistive load of 5 amps. at 125 VDC, contact resistance was well within the permissible limits. This development is especially important for the double-throw models MS25098-23 and MS25100-23. All MS medium-duty models contain: (a) silicone rubber bushing seal for sand, dust, and 15-foot head of water submersion tests, and (b) case-to-terminal sealing.

SIZE AND TERMINALS—Whether MS series to latest MIL-S-3950B, or ST series to Specification JAN-S-23, and MIL-S-21195A(Ships), all have solder terminals. Medium-duty types use 11/16" long, toggle lever, bushing 15/32". 32NS-2A by 15/32" (or 1/4") Bodies including terminals are: 1-1/4" long, 11/16" wide, 29/32" deep, except ST16, -17, -26, -27 are 1-3/4" long and 21/32" deep.

NOTE A: MS and AN types use internal sand and dust toggle seal and other high performance features involving extra cost over ST types. MS types to MIL-S-3950B have internal toggle seal to meet 15 ft. water submersion test. MIL-S-3950 models are superseded by MIL-S-3950B models.
NOTE B: For heavy-duty switches in the MS25098, MS35058, and MS35059 Series, MIL-S-3950B calls for SCREW TERMINALS ONLY. These terminals have SOLDERABLE FINISH and may be soldered after removal of screw.

switches, but the ratings and external dimensions are the same. UL marked types are not regularly stocked but only are manufactured in substantial production runs.

TOGGLE SWITCHES—MEDIMUM DUTY AND MINIATURE

J-B-T INSTRUMENTS, INC.

New SINGLE & DOUBLE POLE — MINIATURE

MANUFACTURED IN CONNECTICUT by J-B-T, the miniature types illustrated make up the firm's 6th and newest family of toggle switches. Series JMT combines drastic reduction in size and weight with the trouble-free construction which characterizes standard size J-B-T switches. Primarily designed for manually controlled, low-current, solid-state devices and miniaturized circuitry for computers, instruments, space, geophysical, and test apparatus, these tiny switches also have application in aircraft, communications, and electronic equipment, and portable products.

Made with a distinctive **green** body single-pole types are $\frac{1}{4}$ " thin, double-pole types less than $\frac{1}{2}$ " square. Both use single-hole mounting with $\frac{1}{4}$ " threaded bushing which will not turn or work loose in the J-B-T surface plate. Stringent in-plant controls assure terminals that are firmly staked and will withstand repeated soldering.

SPECIFICATIONS

Nominal Rating	5 Amp. resistive load, 125 VAC and 24 VDC
Initial Contact Resistance	5 Milliohms max. 3 VDC, 100 Milliamperes.
Dielectric Strength	1,000 volts rms at sea level
Life Under Load	100,000 make-and-break cycles, min.
Weight, Including Hardware	SPDT, 0.19 oz.; DPDT, 0.23 oz.
Dimensional Details	Single pole per Print SK-157 Double pole per Print SK-158

MATERIALS: Switching contacts and rockers are coin silver; center terminal silver-plated. Bat handle is bright chrome-plated brass. Case and cradle are molded of colored phenolic. Bushing, locking ring, and hex nuts are brass nickel-plated. Clamp and lockwasher are made of steel nickel-plated.

HARDWARE & MOUNTING

Mounting hardware supplied consists of one locking ring W-RI-12, two hex nuts, W-NU-11, one internal tooth lockwasher, W-WA-16.
DIRECTION OF MOVEMENT — All JMT single pole and double pole make continuity to terminal **OPPOSITE** throw of lever.

MOUNTING INFORMATION — When mounting switch with locking ring, use drill procedure illustrated.

+COLOR CAPS — Switches are normally supplied with bat handles. For color coding, tight-grip insulator caps are available for easy attachment before or after switches are mounted. Specify color and part number:

Applications: selective-calling mobile communication equipment, remote data transmission, and simultaneous or sequential coding and decoding.

For further data, ask for Bulletins 162-R and D664A. Inquiries also are invited on newly-developed miniature combination relay-oscillator type MRO-B12, 1.10" x .79" x .56" high.

J-B-T frequency-sensitive electro-mechanical relays (decoders) are highly stable control devices. They intermittently make and break contacts when a signal of the same frequency as the tuned reed is received. Although the reed has a high Q, the bandwidth at which the relay responds will be proportional to the input signal level.

RR-A11- and RR-A10 types are round, 4-pin plug-in relays, used primarily on existing mobile equipment.

RO-B Oscillator Controls (sometimes known as tone generators or encoders) are dual-reed units internally shock mounted and of sealed construction. These units control the frequency of oscillation in vacuum tube or transistor oscillator circuits. The RO-B type oscillator control is recommended where accurate and stable AC signals are required.

RR-D types are internally shock-mounted resonant reed relays, which are square, sealed units with 7-pin miniature plug. They now are the most widely used J-B-T relays.

RO-D types are single-reed, internally shock mounted oscillator control for applications where space saving is of importance. Dimensionally they are identical to RR-D relays.

SELECTOR SWITCH UNIQUE 1-PIECE MOLDED WAFER PROVIDES HIGH RELIABILITY

The new IRC-CTS design goes right to the heart of selector switch reliability . . . the wafer. Automated manufacture provides unprecedented uniformity. One-piece *molded* construction of the wafer virtually eliminates drift. In each production run, all switches are identical, terminal placement is exact and permanent. Machine exactness replaces human error and variation, eliminating wide tolerances and assuring high reliability.

- Compact $1\frac{1}{16}$ " size design allows more circuitry per unit of depth behind panel.
- Rivet-free construction permits closer stacking.
- Superior insulation due to repetitive exactness in terminal spacing, and molded glass alkyd material.
- 1000% more silver than used by most commercial switches—evenly applied at point of contact.
- Rotor contacts are double-wiping and self-cleaning.
- Stator contacts are integral with terminals.
- Molded stator will not break or crush during ordinary handling, or if it is dropped.

A balanced lever arm and star wheel detent assembly free from end and side thrust is available for precision military and instrumentation applications. Star wheel detent provides extremely long life and minimum turning torque variation. Double lever arm construction controls torque in both directions of rotation with practically no change in torque during 100,000 cycles of operation through 12 switch positions.

ELECTRICAL RATING

Voltage and Current Ratings:

1 amp at 28 volts DC
1½ amps at 115 volts AC

High Pot Test:

Between adjacent 30° terminals or terminals to ground: 1,750 volts AC RMS for one minute, Between adjacent 15° terminals: 750 volts AC RMS for one minute.

212 Wafer Assembly

The wafer assembly of the IRC-CTS selector switch can be separated into three basic elements, the rotor insulator, the rotor contacts and the stator. The stator consists of the stator insulator, terminal lugs, contacts, contact ring, which is made as a single unit.

Stator Insulator

The stator insulator is a circular molding which encloses the mid portion of each contact and serves as a container for the rotor. The stator insulator also serves as a natural shield and flux barrier, thus protecting the contact areas.

Contact Resistance

Circuit resistance ranges from .003 to .004 ohms on standard switches when measured from one terminal to an adjacent terminal. When measured terminals are not adjacent, up to 180° apart, the resistance will measure higher due to the extra metal in the stator circuits. It is to be noted

The Stator

The Stator is the heart of the IRC-CTS selector switch and determines the circuitry of the switch in conjunction with the location of the selected rotor contacts. The stator is actually a circuit pattern cut out of metal which forms the terminal lugs, center contact ring and the stator contact.

Rotor

The rotor of the IRC-CTS selector switch holds the rotor contacts in place and carries the contacts from one position to another, providing controlled float which prevents open circuiting during severe shock or vibration.

Contact Life:

Standard sterling silver laminated rotor contacts and brass silver plated stator provide reliable life for a minimum of

that the circuit resistance check measures all the metal in the circuit. Thus actual resistance at the point of contact is considerably less than the measured resistance. In IRC-CTS assemblies, contact resistance is unusually stable throughout the switch life.

Detent Rotational Life:

The standard 212 detent assembly (T79, T80, T81 & T82) has a rated life of 25,000 cycles through 12 positions and return.

50,000 cycles through 12 positions and return without appreciable increase in contact resistance. (See detent life.)

The star wheel detent mechanism (T180, T181, & T182) has a rated life of 100,000 cycles through 12 positions and return.

LONGER LIFE CONTACTS

After 1,100,000 index operations, life tests reveal virtually no change in rotor contact resistance. • 1,000% more silver than used by most commercial switches has been evenly applied at actual point of contact by exclusive process. (See Sketch.) • Rotor contacts are double-wiping and self-cleaning. Stator contacts are integral with terminals.

IRC-CTS ROTARY SELECTOR SWITCH ACCESSORIES

IRC, Inc.

IRC-CTS ATTACHABLE POWER SWITCHES

A selection of reliable AC power switches is available for use with selector switches, giving an original source for both the selector switch and attached switches. These power switches can be mounted on the rear frame of the selector switch or between wafers by means of a specially designed bracket.

LICON LIGHTED SWITCHES

A lighted push button combined with the world's finest subminiature switch, the Type 16, for a high rating and long life. A wide choice of colors, sizes and shapes.

TYPE 04

Dressy panel appearance with four bulb illumination. Available in no-hardware front-of-panel mountings. Easy lamp servicing.

TYPE 01-800

Has integral plastic housing that snaps in from front panel. Available in one and two pole, momentary and alternate action.

TYPE 01

Front-of-panel lamp servicing without tools. Non-turn lens cap snaps on. Lamp socket remains stationary when push button is actuated.

SUBMINIATURE PICOFUSES

For computer, micro-electronic and aerospace circuits of 125 V. or less where short-circuit currents as high as 300 amps occur. High accuracy in blowing time at 300% of rating and higher is ideal for sequential switching or in circuits requiring redundancy. Blow time 4 hours min. at 100% of rating; 5 secs. max. at 200%. Amperage printed on body; can be color-coded at additional cost. Ceramic body only $\frac{1}{4}$ " lg. x $\frac{1}{16}$ " dia.; tin-coated copper leads .025" dia. Order 275 (prefix) for axial leads $\frac{1}{16}$ " long for diode clip or in-circuit mounting; 276 for radial leads $\frac{1}{16}$ " long for use in printed circuits or receptacles. *Avg., cold.

HIGH VOLTAGE FUSES

Designed for use in aircraft radio equipment, transmitting equipment, X-ray apparatus, high voltage rectifiers, etc., for circuits up to 20 KW DC or 30 KVA AC. Fuses are fiber enclosed with cadmium plated end caps. Two principles of are suppression are employed: (1) Multi-break fuse wire which blows at each half inch of its length; (2) Ceramic baffles break the arc into several parts and quench it. Blow Time: 110%, 4-hour min.; 135%, 0-1 hour; 200% 0-2 minutes.

LITTELFUSE

MALLORY Switches

Mallory switches are available in three general styles: Rotary, lever-action and pushbutton. Most styles are supplied in both shorting and non-shorting contacts. Shorting switches have contacts with "make" before "breaking" and are widely used in audio circuits. Contacts in non-shorting switches "break" before "making". These switches may be chosen with phenolic, ceramic or glass-epoxy wafer materials. Ceramic is usually selected for high voltage circuits as in switching RF equipment. All switches are supplied with normal mounting hardware. Dial plates are not included (except for Type 13124L).

PHENOLIC WAFER ROTARY SWITCHES

Mallory phenolic wafer rotary switches come in several sizes and contact arrangements. Supplied with nut, washer and 366-1 black knob. Phenolic is MIL grade Richardson T725.

STANDARD 1 1/4" DIAMETER (FIG. A)

Rated 1 amp at 300 VDC; 4 amps, 50 VDC; 2 amps, 300 VAC rms; 12 amps, 6 VAC rms. Maximum non-breaking resistive load, 12 amps. Breakdown, 1000 VAC/DC. Contact resistance less than 0.01 ohm. Supplied with adjustment pin and stop plate.

CIRCUIT BREAKERS

CBB Type CBT Type CBB Adapter

Exact replacement circuit breakers for television and industrial applications. These circuit breakers are manufactured by Mel-Rain Corp. for Mallory to the same specifications as original equipment. "Anti-cheat" reset action is non-cycling. Button must be pressed to reset. Tripping mechanism is temperature compensating for constant protection. Normal tripping time is ten seconds or less. All values above 3.1 amps have special heavy-duty contacts to withstand heavy surge currents. CBT types have twist tab mounting lugs. CBB bushing is supplied with CBB types to adapt to bushing mount.

Ask for free television circuit breaker cross-reference. Lists all popular TV sets.

INDUSTRIAL SEQUENCE TIMERS

DIMENSIONS

DRIVE MOTORS:
115 VAC 60 Cycles,
Synchronous, Leads
4" (Min.) Stripped Ends.

Heavy-duty industrial sequence timers for industrial process control, laboratory timing, prototype timers, etc. Available in three basic frames with 5, 10, or 15 adjustable cams. Cams may be adjusted without tools to provide precise time sequence. SPDT switches are rated 15 amps at 125 VAC, equipped with quick-disconnect terminals, and snap into precision holes in

basic frames. Easily replaced, but normally rated at one million cycles at rated load. Drive motors are 117 VAC synchronous and attach to frames with two screws. Interchangeable in seconds to provide time cycles from 1 minute to 24 hours. Assemblies ready to operate as received; with all instructions, timing knob and dial, terminals, timing chart and hardware.

NEW MODEL 711 MINIATURE SWITCH

Single pole, non-shorting selector switch with stationary and movable solid silver alloy contacts. Slow-break, quick-make action achieved with cam and cam follower. Breaks 7 amps at 125 VAC (or 20 VDC), carries 15 amps at 125 VAC/DC. Molded melamine phenolic body $1\frac{1}{4}$ " dia. x $\frac{1}{2}$ " depth behind panel; $\frac{3}{8}$ " flatted shaft. Mounts by #32 bushing and hex nut. Model number suffix indicates taps (711-3, 3 taps).

ALL CERAMIC OPEN TYPE TAP SWITCHES

Rated 7 amps max., 3 amps interrupted, at 120 VAC. Less for all DC circuits above 20 V for inductive circuits and high voltages. Body $3\frac{1}{4}$ " dia. (up to 8 taps, 9-12 taps are $4\frac{1}{4}$ " dia.) including lugs. Shaft, $\frac{3}{4}$ " dia. Knob: No. 5150 knob recommended. **Shorting Type:** Moving contact bridges closely spaced taps completing a new circuit before breaking the previous one. Switch arm is not indexed and can be left in any position. **Non-Shorting Type:** Positively indexed, moving contact completely disconnects from one tap before contacting succeeding tap.

NEW! A FULL LINE OF PRECISION SWITCHES BY POTTER & BRUMFIELD

IN STOCK AT LEADING ELECTRICAL AND ELECTRONIC DISTRIBUTORS

P&B'S EXPERIENCE ASSURES RELIABILITY AND PRECISION

For more than a third of a century, we have been designing and manufacturing reliable relays. This engineering and production knowhow is now being devoted to our new line of precision snap switches. These are quality switches designed to meet or exceed industry standards for electrical ratings and life characteristics. Operating forces, actuating characteristics and mounting dimensions make these switches directly interchangeable with many competitive types. P&B precision snap action switches meet Underwriters' Laboratories and Canadian Standards Association requirements.

WIDE VARIETY OF STOCK SWITCHES FOR NEW APPLICATIONS AND DIRECT REPLACEMENTS

The snap switches in this catalog cover a variety of the most commonly used types and include three categories: Precision general purpose, precision miniature, and precision subminiature. All three basic types are available with various auxiliary actuators, terminals, and contact arrangements. They can be used for both AC and DC voltages.

Mounting holes, terminals, operating and release forces, pretravel, overtravel, differential travel and pertinent dimensions meet established industry standards.

BASIC SNAP ACTION SWITCHES

PRECISION GENERAL PURPOSE

Compact, reliable, with precise mechanical and conservatively rated electrical characteristics, P&B general purpose snap action switches are for use in applications where loads may be heavy and space is not the primary consideration. They are available with a broad variety of actuators, such as pin plungers, overtravel plungers, rigid lever, roller lever, panel mount plunger, and others, as illustrated and listed on the following pages.

PRECISION MINIATURE

Sturdily constructed but light in weight and small in size, P&B precision miniature snap action switches are highly sensitive and especially suited for compact installations where precision is a primary factor. Their small size and high electrical capacity recommends them for applications of multiple installations in limited space. Basic types are available in various contact and terminal arrangements shown on the following pages.

PRECISION SUBMINIATURE

Designed for applications requiring exceptionally small size and low operating forces, P&B precision subminiature switches are especially suited for electronic equipment, business machines, military apparatus and other precision electrical equipment. They are used where space and weight are primary considerations. These types are available for either direct operation by pushers, cams, or lever actuators with or without rollers. Solder, turret and quick-connect terminals are available.

SPECIFICATIONS

PRECISION GENERAL PURPOSE SWITCHES—TYPES A1 G

Meet Underwriters' Laboratories and Canadian Standards Association Requirements

For Types A1 G1—Contact arrangement: SPDT. Ratings: 15 amps, 125, 250, or 480 volts AC; ½ amp 125 volts DC; ¼ amp 250 volts DC; ¼ HP 125 volts AC; ¼ HP 250 volts AC.

For Types A1 G2—Contact arrangement: SPDT. Ratings: 20 amps, 125, 250, or 480 volts AC; 1 HP 125 volts AC; 2 HP 250 volts AC; 10 amps 125 volts when controlling tungsten filament lamp loads on AC circuits.

PRECISION MINIATURE SWITCHES TYPES A1 M

For Types A1 M1—Contact arrangements: SPDT. Ratings: 30 volts DC; inductive: 10 amps at sea level, 6 amps at 50,000 feet; resistive: 10 amps; motor load: 6 amps.

Meet Underwriters' Laboratories requirements for 15 amps, 125, or 250 volts AC; ½ HP 125/250 volts AC; ½ amp 125 volts DC; ¼ amp 250 volts DC.

For Types A1 M2 (low operating force)—Contact arrangements: SPDT. Rating: 30 volts DC; inductive: 5 amps at sea level, 5 amps at 50,000 feet; resistive: 5 amps; motor load: 5 amps.

Meet Underwriters' Laboratories requirements for 10 amps, 125 or 250 volts AC; ½ amp 125 volts DC; ¼ amp 250 volts DC; ¼ HP 125 volts AC.

For Type A1 M4 (low differential)—Contact arrangement: SPDT. Ratings: 30 volts DC; inductive: 1 amp at sea level, 1 amp at 50,000 feet; resistive: 2 amps; motor load: 1 amp.

Meet Underwriters' Laboratories requirements for 10 amps, 125 or 250 volts AC.

For Type A1 M5 (gold contacts)—Contact arrangement: SPDT. Rating: 28 volts DC; inductive: ½ amp; resistive: 1 amp; inrush: 2 amps.

PRECISION SUBMINIATURE SWITCHES TYPES A1 S

For Types A1 S1—Contact arrangement: SPDT. Rating:

Meet Underwriters' Laboratories requirements for 5 amps, 125 or 250 volts AC. The 30 volt DC rating is as follows: inductive: 3 amps at sea level and 2.5 amps at 50,000 feet; resistive: 5 amps at sea level and 50,000 feet; maximum inrush: 24 amps.

For Types A1 S5 (gold contacts)—Contact arrangement: SPDT. Rating: 28 volts DC; inductive: ½ amp; resistive: 1 amp; inrush: 2 amps.

ELECTRIC SOLDERING IRONS

LITTLE DANDY

New kind of quality in economy iron. All parts replaceable in seconds, including element. Plug-type tip. Anti-roll, aerated handle. Heat-deflecting baffle. Super-flexible cord. Perfect balance.

B-SERIES MINIATURES

Newest advance in truly miniature irons. Precise balance. Cool handle. Long-life, "floating," heating element. Anti-roll baffle. Simple three-piece assembly. Boxed with 6' detachable cord set, 3 assorted tips. Packed 6 to case.

BANTAMS

Small American Beauty irons in wide range of watt-inputs and tip diameters to cover entire range of fine and medium-fine jobs on electronic and electrical production lines.

TRANSFORMER TYPES

Variable heat and non-variable heat models. T-6 model shown; precision 6-volt instrument with variety of heat levels, quick tip-heat changes. T-12 and T-30 models non-variable. All models for use where complete isolation from line voltage is desirable or necessary.

STANDARD SERIES

Hundreds of thousands of these models of American Beauty irons are on production lines all over the world. Stocked in tip sizes from $\frac{1}{4}$ " to $1\frac{1}{8}$ ", input wattages from 60 W to 550 W.

ANGLE-TYPE irons available. (Casing angled for hard-to-reach jobs.)

SOLDERING TIPS

Made of commercially pure copper rod. Shapes and sizes for all AB irons and other makes as well. (1) Nickel-Plated. (2) "Paragon" Quality—best.

PARTS AND ACCESSORIES

You can always get original-equipment-quality parts for any American Beauty Soldering Iron—standardized for quick, easy repair. Also: AB cord sets; spooled and bulk heater cord in 250' lengths; branding irons; soldering iron

	ERSA CONTROL TRANSFORMER MODEL R30 The R30, transformer model has a primary voltage regulator for 110, 125, 150, 220 and 240 volts. The secondary voltage is also variable within the range of 5 to 6.5 volts, thus making it possible to select a temperature range between 240 to 480°C. When not in use, the ERS- R30 rests on a special nozzle provided on the transformer. This protects against overheating. The R30, with a greater output, permits universal use of all the various ERS- R30s with their different capacities. MODEL R30, rated 30 VA, 5.1#. Beau-Tech SH-50, consists of a small electric vacuum generator producing up to 14" Hg vacuum, an inline filter which protects the generator from foreign matter, an SH-52 Cylindrical Probe and five Probe tips from the selection listed at left, and a 4" length of vacuum tubing. The operation of the SH-50 Vacuum System is simplicity itself—plug in the generator line cord, turn on the switch and you're in business. Objects are picked up by holding the index finger over the hole in the handle, raising the finger to release.

SOLDERING AIDS

The hallmark of quality shows in each detail. Examine the straight or angled tips for the hard-to-reach areas... you'll find they're twist-proof, hard-chrome plated to shed solder. More, both ends are insulated from one another. The practical fork-ends are a "must" for twisting or holding wires. And when you want to scrape joints, connections or ream out lug holes, just flip your Beau-Tech soldering aid to the spade end. Non-slipping, non-rolling "hex" handles. Available in standard, miniature and single ended models.

BEAUCHAINE

DESIGN IN-DUS-TRONIC tools are more streamlined, with slender jaws and fine points, to reach into the tight spots and perform the specific work required of the electronics technician.

TEST AND INSPECTION Individually tested for hardness, each tool must maintain highest standards for handle strength and cutting ability. To assure perfect jaw alignment, pliers must cleanly cut single bond paper strips and snip cotton-covered lamp cord without fraying. Each tool is guaranteed against defects in workmanship and materials.

WORKMANSHIP IN-DUS-TRONIC tools are hot drop-forged from special analysis alloy steel, machined and finished with the same care and precision which have made world-famous BOKER TREE BRAND Fine Cutlery and surgical instruments for over a century. Individually fitted and adjusted, each is accurately heat-treated by HYDRIZING, which minimizes "carburation" and "decay". Cutting blades are precision-hardened with electronic controls, and honed by hand for keen edges that retain their sharpness. Individually Boxed — Six is minimum quantity.

PLASTIC HANDLES—(TN-22, TN-33, TN-44, TN-55) (M2T, M3T, M4T, M5T) are of Tenite II, hex and will not roll off the work bench. Shock-proof, practically unbreakable and will stand rough use on industrial production lines.

METAL HANDLES—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x 3/8" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

METAL ENDS—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. 1/8" forks are made especially for use on printed circuits and transistors.

SPADE END—is a reamer to clean lug holes of solder.

CURVED END—can be used as a scriber for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

KNIFE & SCRAPER—for cutting and repairing printed circuits.

WIRE BRUSH—has approx. 200 bristles of stainless wire .0035 in dia. to which solder will not adhere. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

CHASSIS PUNCHES

ROUND, SQUARE, "KEY," AND "D" TYPES

NO. 730 ROUND PUNCH

Swiftly cuts clean, accurate holes in radio chassis for sockets, switches, controls and other equipment. Operates simply with an ordinary wrench for drive power . . . just insert in a small drilled hole and turn drive screw. No reaming or filing . . . hole is smooth, perfect. 29 sizes from $\frac{1}{2}$ " to $3\frac{1}{8}$ " diameter. New Ball-Bearing Drive available for even easier, speedier operation.

NO. 731 SQUARE PUNCH

Cuts square or oblong openings as desired. Available in five sizes for making $\frac{1}{2}$ ", $\frac{3}{8}$ ", $\frac{3}{4}$ ", $\frac{7}{8}$ ", and 1" square holes. Drive screw fits into $\frac{1}{2}$ " hole, which can be drilled or made with $\frac{1}{2}$ " No. 730 GREENLEE Round Punch. Operates with an ordinary wrench for drive power. Individually packed.

NO. 731-R KHP RELAY PUNCH

Makes clean, accurate, *finished* holes in up to 16-gauge metal for Potter & Brumfield KHP miniature relay sockets. Makes 1.015" x .859" hole.

NO. 732 "KEY" PUNCH

Quickly, easily cuts holes for keyed radio sockets. Operates on same principle as other GREENLEE Radio Chassis Punches . . . an ordinary wrench supplies the drive power. In five sizes to make openings of $\frac{1}{32}$ ", $\frac{1}{16}$ ", $1\frac{1}{64}$ ", $1\frac{1}{32}$ ", $1\frac{1}{16}$ ". Drive screw fits into $\frac{1}{2}$ " hole. Individually packed.

NO. 733 "D" PUNCH

Simplifies and speeds the work of making "D"-shaped openings for high-frequency, miniature tube sockets and other equipment using this type opening. Available in $\frac{1}{2}$ " and $\frac{3}{4}$ " sizes. Operates on same principle as other GREENLEE Radio Chassis Punches with an ordinary wrench supplying the drive power. Drive screw fits into $\frac{3}{8}$ " drilled hole. Individually packed.

NO. 734 DOUBLE "D" PUNCH

Quickly makes standard electrical receptacle openings. Cuts standard hole $1\frac{1}{8}$ " dia. across parallel sides, $1\frac{3}{8}$ " dia. across rounded ends. Simply insert into a $\frac{1}{2}$ " hole and turn with an ordinary wrench. Does the work in less than five minutes . . . eliminates all tedious hand filing . . . gives a smooth, perfect opening.

Prevents harmful effects of excess capillary action of solder along stranded wire beneath insulation.

Order tool number by wire size being used. **"N" Type Tweezers are made for one gauge wire only (not for a range of sizes). Therefore give better fit on wire for greater efficiency. Shorter tip hole provides for close inspection gap on precision soldering such as called for in current NASA specifications.

 (T) M-160 Combination reversible phillips and standard screwdriver \$2.48

ELECTRONIC TOOL KITS

NEW COMPACT ELECTRONIC KIT

A set of most widely used precision tools for servicing all type of electronic equipment. Packaged in sturdy roll up vinyl protective case. Kit contains: chain nose plier, wire stripper, injecting oiler, fine nose tweezer, industrial burnisher, pin vise, combination screw and ¼" nut driver. KE-7 \$9.90.

MASTER 20 PIECE SERVICE TOOL KIT

Ideal kit for service and repair of radio, TV, instruments and office equipment. Comes in protective leatherette zippered case. Kit contains: Diagonal chain nose and groove grip pliers, soldering iron with solder core, pen burnisher with 12 blades, straight and bent nose tweezers, 2 jewelers screw drivers, nut drivers ¼" and ¾", standard and phillips screwdrivers, 2 needle files, magnifier, pin vise, aligner and chisel. K-600 \$24.75.

MAINTENANCE AND SERVICE TOOLS

High-quality precision-designed tools for ease in maintenance and service of delicate electronic equipment.

- (A) M-100S Retriever clamp, straight type, 5½" long \$4.74
 M-100C Retriever clamp, curved type, 5½" long \$4.88
 (B) T-720N Straight thickness gauge, 26 blades Length 3" .0015-.025" \$3.90
 (C) OS-84 Precision injecting oiler, 6" long \$1.89
 (D) S-393 Plastic 4 oz. Industrial oiler \$3.90
 (E) S-395 Spring loaded pressure type oiler 4 oz. \$4.90
 (F) S-81 Standard screw starter, nylon handle \$2.40
 (G) S-82 Phillips screw starter, nylon handle \$2.50
 (H) WB-70 Stainless steel wire brush 9" long .005" filament \$1.85
 (I) M-50 Reversible nylon shaft screwdriver \$1.68
 (J) M-130 Ratchet offset screwdriver \$1.29
 (K) M-135 Pin vise \$1.18

KONTACT 60 AEROSOL CONTACT CLEANER

For contacts, switches, controls, tuners, all Electronic Equipment. Leaves anti-corrosion film and long-lasting lubricant.

RELAY TOOL KITS

MASTER 15-PIECE RELAY TOOL KIT

Precision-made and professionally-designed group of new tools for adjusting and maintaining relays, contactors, switches, controls, and other components for the telecommunication and electronic industries.

Kit contains: 2 spring adjusters, tension & thickness gauges, Duck Bill plier, Screw Driver, Tweezer, Mirror, 4-way Tool, Brush, Armature & Stop Benders, Contact Spray, Contact Burnisher.

KIT K-55 \$34.00

Precision-made tools for setting, adjusting and testing most type relays. All tools highly polished and made of finest quality steel for most accurate and delicate work. Packaged in fine protective zippered case.

Kit contains: Spring adjuster, Armature bender, Arm bender, Relay spring Duck Bill Plier, Burnisher, Tension gauge 0-50 gram. KIT KR-6 \$19.90

COMPACT RELAY ADJUSTING KIT

RELAY & CONTACT BURNISHER-CLEANERS

DIAMOND BURNISHERS

Exclusive Features:

- Strong abrasive power
- Long lasting

Consists of abrasive Diamond particles - Developed for any type contacts: Silver, Platinum, Gold, Palladium, Tungsten, Molybdenum - Length 5 5/8" - Diamond coated face 1" x 1/4" - Nylon Shaft - Three types to meet every application: Type 200 (coarse) for Industrial Relays - Type 300 (medium) for Intermediate and Telephone relays - Type 400 (fine) for Sensitive Relays.

K-234 Set of 3	\$14.85
Individual spatulas and Kits packaged in rigid plastic boxes.	
D-200 Shaft green	\$4.95
D-300 Shaft red	\$4.95
D-400 Shaft blue	\$4.95

POCKET-TYPE BURNISHERS

Used for cleaning general type relay contacts. Economical - supplied with 6 non-residual abrasive replaceable blades stored in pen barrel. Pen made of sturdy plastic for dielectric work. Length 4 1/2" Dia. 3/8" Blades 3/4" wide 1 3/4" long .007" and .0035" thick.

PEN #PB-7 (with 6 blades .007" thick)	\$3.48
PEN #PB-3 (with 6 blades .0035" thick)	\$3.78
BLADES #B-7 (25 replacement blades for PB-7)	\$3.55
BLADES #B-3 (25 replacement blades for PB-3)	\$3.65

ECONOMY BURNISHERS

For Industrial and general type contacts. Flexible, Non-residual. Leave no grit or dust and will not affect contact points. Plastic insulated handles for working on live contacts. Packaged in vinyl pouches for full protection.

Standard packages 48 pcs. OB-1 (for fine contacts. Abrasive coated 1/2" long, 3/4" wide, .007" thick)	\$3.25 ea. (\$2.84 Packages 24 Pieces)
OB-2 (for extra sensitive points. Non-abrasive, nickel plated) 3 1/2" long, 1/4" wide, .010" thick	\$4.25 ea. (\$3.84 Packages 24 Pieces)
OB-3 (for general purpose contacts. Abrasive - cadmium plated. Hard molded handle, 3 1/2" long, 1/4" wide, .010" thick)	\$6.55 ea. (\$5.94 Packages 24 Pieces)
OB-4 (for industrial use. Abrasive - cadmium plated. Hard molded handle. 3 1/2" long, 1/4" wide, .020" thick)	\$7.85 ea. (\$7.04 Packages 24 Pieces)

TECHNICAL ADVANTAGES

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high-grade, water white resin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original resin. Soldered joints made with Ersin Flux do not corrode, even after prolonged exposure to any degree of humidity. It has been tested under climatic conditions ranging from the Arctic to the tropics.

Ersin Flux reduces the surface tension of molten solder causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odors. Non-toxic in use.

Leaves nothing but pure resin on the work after soldering and may be used whenever plain resin is specified.

Complies with all pertinent federal specifications QQS-571.

Multicore construction. 5 separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents dry joints, i.e., those having high electrical resistance.

Although there are 5 cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction, which provides thinner walls of solder, than are found in same gauge single cored solder.

Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

Ersin Multicore Solder is non-toxic in use. Cadmium is completely eliminated. The quantity of antimony is less than government standards allow. There is no danger of harmful effects caused by such impurities.

Every package of Ersin Multicore is labelled with the exact tin/lead content. This precise labelling results from Multicore's precise manufacturing methods.

COPPER-LOADED SAVBIT ALLOY

Copper-loaded SAVBIT stops the wear and erosion of copper soldering iron tips . . . increases tip life by 1,000%.

Characteristics and specifications:

Savbit Alloy is available in Ersin Multicore 5-Core Solder containing non-corrosive extra fast Ersin flux in 14, 16, 18, 20 and 22 gauge.

Excellent conductivity, tensile and shear strength.

Multicore's SAVBIT Alloy is entirely new and different—it is patented.

Available in the 7 lb. bench reel and 1 lb. Dispenser Carton

MULTICORE SALES CORPORATION

LOWEST COST INDUSTRIAL QUALITY SOLDERING IRONS!

Every SIDCO handle and soldering tip is unconditionally guaranteed to give satisfactory service — in the opinion of the user — or it will be replaced without charge.

Every SIDCO heating element and handle is listed by Underwriters' Laboratories.

Every SIDCO heating element is individually tested for wattage to a tolerance of $\pm 3\%$.

Skin packed in dozens on compact 2 1/2" x 5" cards. All are chemically treated to prevent binding or freezing. (Why pay extra for anti-seize compound?) T Series tiplests are pure copper, pretinned to save you work. Since copper dissolves in solder, the PL series of tiplests have been developed for heavy industrial usage. This series has a protective layer of metal, impervious to solder, over the copper. A final silver coating is applied for ease in tinning.

Screw-in base heating units

High heat, right at the tip, minimizes the time required to bring a joint to soldering temperature. As a result, there is less possibility of damage to delicate components from heat conducted along their lead wires. Thermal time constant approximately 80 seconds.

ORYX

PRECISION SOLDERING INSTRUMENTS

FIVE REASONS WHY PRODUCTION MANAGERS CHOOSE ORYX SOLDERING IRONS

1. MINIATURE SIZE

ORYX soldering irons are small and easy to handle as pencils. Their miniature size helps to speed any precision soldering operation. Damage to adjacent components is eliminated. If you can see it, you can solder it with ORYX!

2. FEATHER WEIGHT

A standard, utility-type 100 watt soldering iron weighs about 2 lbs. The so-called pencil-type irons typically weigh between 2 and 6 ounces. ORYX soldering irons, by contrast, weigh as little as ¼ ounce. This true feather weight virtually eliminates hand fatigue. Workers can turn out many more joints per hour with fewer rejects.

3. HIGH EFFICIENCY

All ORYX soldering irons utilize a unique element-in-the-tip design principle. By generating the heat within the tip, far fewer watts are needed to achieve results comparable to much larger irons. This principle also provides quicker heat recovery because the heat path between element and joint is so very short. The need for large insulating handles is eliminated.

4. SAFETY

ORYX low-voltage irons are polarized, making it possible to directly ground the shaft, tip, and one side of the heating element. This provides a maximum degree of safety, both to the operator and to delicate circuitry. The ORYX line of 115 V. plug-in models includes 3-wire styles whose shafts and tips may be connected to ground for safety.

5. ECONOMY

A standard ORYX low-voltage industrial iron costs less than \$5 in production quantities.

REPLACEMENT TIPS for low-voltage soldering irons

Oryx tips are precision machined from a special copper alloy with outstanding heat conduction characteristics. Nickel plating reduces scaling. Iron-plated tips and solid nickel tips give much longer life with slightly reduced heat transfer. Gold tips recommended for microcircuits only.

SOLDERING TWEEZERS

Unique tools with heating elements in each arm. Speed soldering time by heating both sides of joint. Tweezer action conducts heat quickly into joint. Low-voltage operation assures safety to circuitry and to operator.

MODEL TW-6—Precision model for semiconductors, solid state, hairspring movements, miniature relays, thermostats, etc. Solid nickel ⅜" fixed tips. Nominal temperature 550°F. Weighs 1 oz. 6-volts, 18-watts, AC or DC.

MODEL TW-6, complete with 4½' cord.....Net \$14.95 ea.
(12 or more \$14.45 ea.)

MODEL TW-12

Heavy duty model for regular production-line soldering of radio, TV, radar, telephone, and switchboard assemblies. Furnished with replaceable ⅜" N tips. Nominal temperature 625°F. Weighs 2 oz. 12-volts, 25-watts, AC or DC.

MODEL TW-12, complete with 4½' cord.....Net \$14.95 ea.

WALSCO ALIGNMENT & SPECIAL TOOLS

WALSCO SPECIAL TOOLS

SOLDER-AID TOOL

Wire brush makes removing of solder a cinch. Forked tool end and brush made of special stainless steel to which solder will not stick.
Cat. No. 2529 8" long plastic handle Net 1.00

SOLDER-AID TOOL

Similar to No. 2529 but has very thin curved hook in place of brush. Designed for use in delicate printed circuit work.
Cat. No. 2530 8" long plastic handle Net 1.00

INSPECTION MIRROR

High-visibility polished glass reflection mirror is protected against breakage by a heavy gauge plated metal backing. Has plastic, insulated grip.
Cat. No. 554 Net .42

MINI-HOLD SCREWDRIVERS

Designed primarily to speed replacing phono cassettes. Exclusive "wedge-action" security grip. Extremely small screws (No. 1 to No. 4) "Mini-Hold" measures just 2-7/8" when in use.
Cat. No. 2568 2-7/8" long, open length 3 1/2" Net 2.14
Cat. No. 2569 7" long Net 2.40

REACH-ALL PEN OILER

Precision instrument oiler. Features extending and retracting tube. Disposes a drop or fraction of a drop of high quality oil.
Cat. No. 984 Net .59

SERVICE TWEEZERS

Cat. No. 570 Self-Closing Tweezer with cross-over action, 6 1/2" long, serrated, blunt points. Net .99
Cat. No. 571 Heavy-Duty Tweezer with slide-lock feature, 6 1/2" length, serrated, blunt points. Net 1.10
Cat. No. 572 Precision Tweezer with narrow, pointed ends especially suitable for delicate work. Over-all length 4 1/2". Net .75
Cat. No. 575 Tweezer Kit, made of durable leatherette, containing one each of the above listed tweezers. Net 2.84

HEX WRENCH POCKET SET

Contains the 6 most popular size wrenches from .050 to 3/16". Mounted in convenient handle.
Cat. No. 564 Net 1.83

WALSCO LUBRICATOR

Designed for a light grease or oil such as Walco-lub-B, Lubriplate, Tunerlub, etc. Operates by simple thumb pressure.
Cat. No. 988 Net .53

WALSCO SLUG RETRIEVING & SCREW HOLDING TOOL

Especially designed for removing "lost" TV Tuner slugs in Standard Coil Tuners. Excellent screw holding tool. End is precision-ground of hardened steel.
Cat. No. 2565 11" length Net 2.70
Cat. No. 2566 15" length Net 3.25
Cat. No. 2567 19" length Net 4.30

3-STEP TAP

Eliminates the need for carrying 3 separate taps and handle. Designed for reaming holes, tapping new holes, etc. Sizes are 6-32, 8-32 and 10-32.
Cat. No. 2574 Net 3.50

KEY WRENCHES

Assortment of 4 small spine wrenches. Fits all set screws up to 1/4" and cap screws up to No. 8.
Cat. No. 8602-F Net .63

EASY-ON TOOL GRIP

Designed for pliers, cutters, diagonals, wire, snippers, etc. Made of flexible, elastic plastic. Gives superior insulation and protection against electrical shock.
Cat. No. 521 Small, per pair Net .23
Cat. No. 522 Medium, per pair Net .27
Cat. No. 523 Large, per pair Net .33

PROTECTO TUBE

Insulate the handles of your pliers, wire cutters, screwdriver shanks neatly and effectively with Walco Protecto Tube.
Cat. No. 18K Net 1.20

KNURL-TITE WRENCH

Tighten or loosen knurled finish nuts quickly and easily. The knurled nut is slipped into the collet-type pressure jaws. A quarter turn of the handle results in a positive vise-like grip.
Cat. No. 2581 3/8" diameter nut Net 4.83
Cat. No. 2582 1/2" diameter nut Net 4.83
Cat. No. 2583 5/8" diameter nut Net 4.83

NON-MAGNETIC BERYLLIUM SCREWDRIVERS

Ideal for making adjustments near magnetic fields such as in focalizers of TV sets. Does not affect TV picture as a steel tool would.
Cat. No. 2560 1/8" dia., 9" overall length Net .95
Cat. No. 2561 1/8" dia., 13" overall length Net 1.05
Cat. No. 2562 3/16" dia., 9" overall length Net 1.48
Cat. No. 2564 3/16" dia., 13" overall length Net 1.65

HEAT SINK

Protects transistors and diodes when soldering. Firm grip, light weight; solder will not stick to aluminum body.
Cat. No. 2577 Net .36

WALSCO PICK-UP TOOL

For home, shop, office, or farm. Many uses. Picks up pieces dropped in inaccessible places, start screws, nuts bolts in hard places. Ideal for radio men, electricians, auto mechanics. Housewives use to wash bottles, clean, polish places hard to reach.
Cat. No. 2563 24" inches Net .98

TRIG-O-MATIC WIRE STRIPPERS

Similar to 594 but has a Trig-O-Matic action that holds jaws open until released. Especially desirable for stripping of fine stranded wire.
Cat. No. 593-01 for No. 10 to 22 Net 5.93
Cat. No. 593-02 for No. 10 to 18 Net 5.93
Cat. No. 593-03 for No. 14 to 30 Net 5.93
Cat. No. 593-04 for No. 16 to 22 Net 5.93
Extra Blades for above per set Net 1.35

SPEED-O-MATIC WIRE STRIPPERS

With fully automatic, delayed-action return that prevents the crushing of fine stranded wires... Completes the stripping operation with one simple squeeze of the handles. Strips all types of wire insulation from No. 10 to No. 30 wires by easy exchange of cutter blades.
Cat. No. 594-01 for No. 8 to 22 Net 5.93
Cat. No. 594-02 for No. 10 to 18 Net 5.93
Cat. No. 594-03 for No. 14 to 30 Net 5.93
Cat. No. 594-04 for No. 16 to 22 Net 5.93
Extra Blades for above per set Net 1.43

STRIP-ER-CLIP

Eight-spot gauge wire stripper. Strips and clips all wires from 12 to 26 gauge. Prevents accidental nicking or cutting of wires.
Cat. No. 595-X Net 1.38

ALL-PURPOSE WIRE STRIPPER

Automatically strips insulation from fine stranded wires. "Stay open" feature prevents crushing fine wires. Blades are easily replaced if necessary.
Cat. No. 591-00W Net 5.93

WALSCO OILETTE

Filled with high grade Walco oil. Dispenses accurately one drop at a time. For use on electronic and electrical devices, clocks, office machines, sporting goods, etc.
Cat. No. 986 Net .83
Cat. No. 986-22 refill for Oilette Net .33

NEW WALSCO CHEM-O-JECTOR

A new type applicator for lubricant, greases, certain adhesives and many cleaning fluids, used in electronics. Uses the "hyposmotic" plunger principle, which makes it possible to reach "hard-to-get-into" places.
Cat. No. 987 Net .30

LONG REACH OILER

Extension telescopes to over 7" Excellent for lubricating hard-to-reach places. Contains finest quality oil purpose oil.
Cat. No. 985 Net 1.07

Weller DUAL HEAT Soldering Guns

Dual heat. All Weller guns offer Dual Heat, an original Weller feature that provides two tip temperatures from the same gun. Two trigger positions permit instant switching to high or low heat, whichever is best suited for the job. The use of low heat prevents damage when soldering near heat-sensitive components and prolongs tip life. High heat is instantly available when needed.

Instant heat. Solders in seconds. No waiting for the tip to heat. No wasted current.

High-Efficiency Tip. Made of copper for superior heat transfer and optimum soldering results. Slips easily into difficult places.

Exclusive Tip Grip. Wiping action of tip fastening nuts eliminates contact resistance and oxidation. This assures full, constant heat.

Spotlight. Illuminates the work and eliminates shadows.

Fingertip control. Heat is instantly "on" when trigger is pulled, instantly "off" when trigger is released. No need to unplug the gun. No danger of damage from an idling hot tool.

Operating comfort. Compact design and perfect balance make precision soldering easy and eliminate fatigue.

Guaranteed one year. All Weller guns are UL and CSA approved, and guaranteed for one year against defects in material and workmanship.

Weller MAGNASTAT® Soldering Irons

for controlled temperature soldering

Only Weller brings you soldering irons with temperature control in the tip. One Magnastat iron with 3 different controlled temperature tips does the work of 3 different irons. And it maintains proper temperature for secure, reliable soldered connections.

- Tip temperature will not vary more than $\pm 3\%$ when idling.
- A Magnastat iron provides efficient soldering temperature under load and excellent recovery.
- Your choice of 3 different controlled temperatures by interchanging Magnastat tips.

STANDARD WELLER MAGNASTAT IRONS

MODEL NO.	WATTS	TIPS
W-60	60	5-CIN—750°F
W-80	80	6-EIN—750°F
TC1202	120	12-G4N—750°F

Furnished with standard two-wire cord and tip number designated.

- Weller Magnastat irons do the work of uncontrolled irons that require much higher wattage and weigh twice as much.
- The light weight of a Weller Magnastat iron reduces operator fatigue. Handle remains cool.

Over 90 Magnastat Weller tips are available. Tips come in 3 controlled temperature ranges—600°F, 700°F and 750°F—and in many different shapes.

Temperature Controlled "Low Voltage" Soldering Unit

For production line and research laboratory use where accurate control of tip temperature is essential to meet rigid soldering specifications. Choice of 4 different tip temperatures from one soldering pencil merely by interchanging 4 different controlled temperature tips.

- Temperature control is in the tip. Choice of 500°F, 600°F, 700°F and 800°F tip temperatures.
- Extremely small and light in weight. Easy to control.
- Suitable for miniature or general soldering.
- High efficiency and rapid recovery. Packed with plenty of reserve power.
- Low 24 volt operation for component and user protection.
- Isolated for elimination of leakage current.
- Handle of high-impact plastic remains cool.
- Interchangeable tips are premium plated.
- Soldering iron stand attached to power unit.
- Power cord is silicon rubber covered, extremely flexible and easy to maneuver. Doesn't break or burn.

Interchangeable tips available: $\frac{1}{16}$ ", $\frac{1}{32}$ ", $\frac{3}{32}$ ", $\frac{1}{4}$ ", $\frac{3}{16}$ " and $\frac{1}{2}$ " screwdriver with choice of 500°F, 600°F, 700°F and 800°F controlled temperatures.

Continuously Variable Temperature Controlled Soldering Unit with SCR and Thermistor Control Circuit

Features continuously variable tip temperatures from 200°F to 450°F—simply dial the temperature required. This unit is specifically engineered for low-temperature, miniature soldering applications. Interchangeable tips include $\frac{1}{16}$ " (standard) and $\frac{1}{32}$ " conical flat. Otherwise identical to W-TCP (above) except wattage: 20 instead of 60.

Weller Utility Soldering Irons

Marksman Soldering Irons

"Industrial Rated" Pencil Soldering Irons

- Low cost 115 volt iron has tip temperature of 860°F with 25 watt input. Ideal for miniature type soldering.
- High efficiency and rapid recovery.
- Does the work of irons that require much higher wattage.
- Lightweight design reduces operator fatigue, provides accurate control.
- Rugged heating element designed for durability, long service.
- Readily replaceable parts. Change your own heating element or cord set.

Interchangeable tips available: $\frac{1}{16}$ ", $\frac{3}{32}$ " and $\frac{1}{8}$ " screwdriver. Premium plated for long life.

WALLBRAND SOLDERING PENCILS, IRONS AND GUNS

SINCE 1864

Here are a few of the reasons why engineers choose WallBrand pencils and irons. They're Thermogram Rated for better efficiency. Cooler Handles. Feather Light, Perfect Balance. Extreme Operator Comfort.

Production Line Model 18HD—Thermogram Value: 300—25 watt input. Engineered for continuous precision soldering applications, the Model 18 has a total weight (less cord) of only 1½ ounces. A wide selection of tips available. Specifically engineered for the demanding applications of micro-circuitry, and high density packaging, precision work on solid state devices, printed circuits, etc. Designed with the critical temperature ranges of micro-miniature components in mind.

Production Line Model 14HD—Thermogram Value: 900—40 watt input. The Model 14 has the same precision components as the Model 18 and is designed for continuous production line work requiring more heat in a wide variety of tip sizes. Also 50 watt. Now, in addition to the present Wall soldering pencil irons, you can have Wall soldering pencils in a new plug type system. All heating elements for the 614-618 and sub-miniature 6116 are interchangeable with one handle and cord assembly.

HD Type for continuous, heavy duty soldering requirements:

- Triple-life resistance wire wound on pure mica. • Offers constant, even tip temperature.
- Extra fast recovery. • Excellent balance. • 120 or 130 volts, ac or dc (other voltages on request).

The Wall Trig-R-Heat Soldering Gun—Feather light, 14 oz., no heavy transformer. You can reach hard to get spots, tip will not deform. It has an insulated spot light switch, independent of trigger action. Heats instantly, recovers instantly. Rugged, precision built, made to last. One gun with two interchangeable tip and element assemblies to solve all soldering problems. This gun is made for the man who wants the best.

Economaster 6316—Industrial type soldering pencil at a popular price. Light weight, excellent balance, rugged construction, stable tip temperature. Ideally suited for all soldering applications.

14DS New Wall Desoldering Tool—Keeps solder in a molten state in reservoir, operated with one hand, fits existing Wall HD Iron. Replaceable tip (.080 opening).

538HD Swivel Iron—Adjustable, seven positions. From straight to 90° in 15° increments. Quick positive locking adjustment. 80W or 100W ¾" tip size.

2AG Heat Gun, AG Heat Gun—Plug-type hot air guns from 200 to 600 watts, adaptable for any usage requiring up to 1000° F. 2AG pistol grip available with trigger at additional cost. Opens air and heat at same time. Apply heat only when you need it. **AG handle grip.** One heating element fits both guns. All five tip styles interchangeable. Special tips upon request. Three-wire cord assembly. The perfect guns for hundreds of different uses—to shape, form, weld and seal thermoplastics. Excellent heat source for shrinkable tubing. Gun includes neoprene air hose, hose fittings and pressure regulator valve.

Soldering Tips for Pencils and Irons—Wall has an extremely wide selection of soldering tips. Write for Bulletin I-464. These soldering tips are available in three different series, for WallBrand irons and pencils.

Anniversary—Industrial grade. Highest quality. Copper core. Special iron coating. Centerless-ground shaft. Non-freeze. Bright finish. Ultra long life for precision work and rigorous production line demand.

WallKlad—Industrial grade. Copper core, iron coating chrome plated for production applications, critical laboratory use.

WallBrand—Commercial grade, copper, nickel plated for some production and all commercial applications.

A complete selection of tips from ¼", ⅜", ½", ⅝", ¾", ⅞" and 1". Special tips to specification, designed upon request.

New Soldering Tip Dispenser Pac. WallBrand tips are available in a handy tip dispenser pac. Tip sizes ¼" through ¾". This unique Wall development keeps tip individually sealed in a color coded, continuous belting, plastic envelope. These envelopes are loaded in the popular Tip Dispenser Pac. The WallBrand individual Tip Dispenser Pac is ideally suited for production line station or stock distribution.

WALL MANUFACTURING CO.,

Industrial Soldering Pencils are built to exceed federal specification W-S-570a as amended. WallBrand soldering products are UL and CSA listed.

COMPACT SETS

Series "99" Sets

Each set contains a Series "99" regular handle and various Series "99" interchangeable blades. See-thru plastic case is pocket size, has flat base that permits its use as a bench stand.

No. 99PS-40 ALLEN HEX TYPE SCREWDRIVER SET

Includes nine Allen Hex type screwdriver blades (99-20 thru 99-26), 99-X5 extension blade, 99-1 handle, and see-thru case.

Net \$6.75

No. 99-PS50 NUTDRIVER/SCREWDRIVER SET

Includes seven regular nutdriver blades (99-6 thru 99-12), two slot tip screwdriver blades (99-811 and 99-812), two Phillips screwdriver blades (99-821 and 99-822), 99-X5 extension blade, 99-1 handle, and see-thru case.

Net \$8.55

No. 99PS-60 BRISTOL MULTIPLE-SPLINE TYPE SCREWDRIVER SET

Includes nine Bristol Multiple-Spline type screwdriver blades (99-61 thru 99-69), 99-X5 extension blade, 99-1 handle, and see-thru case.

Net \$6.75

Convertible Nutdriver and Screwdriver Sets

Black plastic torque amplifier handle (1" x 3 1/2") slips over handle of pocket size (3 1/2") nutdrivers and screwdrivers . . . provides large grip, extends reach and increases driving power to that of standard size tools. See-thru plastic case fits pocket, stands upright on bench.

No. PS7 NUTDRIVER/SCREWDRIVER SET

Contains two nutdrivers (1/4" and 3/8"), two slot tip screwdrivers (3/32" and 1/8"), two Phillips screwdrivers (#0 and #1), hollow handle, and case.

Net \$3.45

No. PS44 SCRULOX SCREWDRIVER SET

Includes five Scrulox screwdrivers (#1 thru #14), one nutdriver (1/4"), hollow handle, and case.

Net \$3.45

No. PS88 SCREWDRIVER SET

Contains five slot tip screwdrivers (3/32", 1/8", 5/32", 3/16", 1/4"), three Phillips screwdrivers (#0, #1, #2), hollow handle, and case.

Net \$3.93

No. PS120 NUTDRIVER SET

Contains ten color coded nutdrivers (3/32" thru 3/8"), hollow handle, and case.

Net \$5.55

REGULAR AND JR. SEIZERS®

Outreach, outhold needle nose pliers. Clamp tightly. Hold wires for soldering and serve as heat sinks. Retrieve small parts. Two-position snap-lock. Stainless steel, box-joint construction. Precision machined and tempered.

Regular 6" Seizers have serrated jaws. Jr. Seizers are 5" long, have smooth jaws that won't mar delicate materials.

**"BLUE CHIP"
TRANSFORMERS**
62 TYPES
5 DIFFERENT SIZES

Tiny, plastic cased, Blue Chip transformers for printed circuit applications, are available for a wide choice of power ratings.

Five different sizes, from .10 to 1.2 cubic inches with a total of 62 new ratings are listed below to indicate the available power levels for both voice frequency range and extended frequency operation. These ratings take into account not only power handling capacities at minimum frequencies, but also total harmonic distortion under stated conditions. Within the limits shown on the rating charts, variations in both power and distortion levels are possible depending upon the minimum operating frequency.

Blue Chip transformers meet Mil-T-27A, Grade 5, Class S requirements. These versatile transformers are available from ADC, or through your distributor.

POWER TRANSFORMERS FOR MILITARY AND INDUSTRIAL APPLICATIONS

Reliability, minimum size and long life under rugged environmental conditions are prime requisites in today's military electronic equipment. To meet these modern standards, ADC offers a complete line of hermetically sealed power transformers. Designed to meet MIL-T-27A specifications and utilizing MIL cases and mounting dimensions, these units offer our customers a ready source for prototype and produc-

tion applications. All military contractors and commercial electronic engineers with stringent environmental conditions will find these carefully rated units ideally suited. For those applications where hermetic sealing is not necessary, we offer the conservative transformer designs of our hermetically sealed line, in drawn steel cases of MIL size and mounting dimensions with phenolic terminal plates and solder lug terminals.

POWER TRANSFORMERS—60 Cycle

ADC offers these standard power transformer designs to cover a wide range of requirements for electronic circuit application. They are available in standard MIL case sizes, hermetically sealed to meet all requirements of MIL-T-27A, Grade 4, Class R, life expectancy X. Maximum operating altitude is 10,000 feet.

The same electrical ratings are also available as commercial grade fully enclosed units for non-military applications in the same MIL case sizes. This version is furnished with a phenolic terminal board and heavy duty solder lug terminals. Mounting screws and tapped inserts provide the same mounting centers as MIL-T-27A versions.

POWER TRANSFORMERS—400 Cycle

These items are especially designed for maximum performance in 380 to 1500 CPS applications, with maximum altitude ratings of 50,000 feet. They are hermetically sealed to meet all requirements of MIL-T-27A, Grade 4, Class R. Standard MIL case sizes and construction are used.

MILITARY STANDARD TRANSFORMERS

These Military Standard transformers have been specified by ASEA and are established by the three Military Services and the transformer industry as standards for Military transformer applications. Each item is available as either Grade 1 or Grade 4 (ruggedized) as requested. Tests have been conducted in ADC's environmental laboratory which indicate that these units will meet the requirements of MIL-T-27A, Grade 4, Class R operating temperature; life expectancy X 10,000 hours minimum).

INDUCTORS FOR MILITARY AND INDUSTRIAL APPLICATIONS

ADC's line of inductors are circuit running mates to ADC's power transformers. They are available hermetically sealed, to meet MIL-T-27A requirements Grade 4, Class R, life expectancy X. For commercial applications, where hermetic

sealing is not necessary, these same ratings are available in MIL cases and mounting dimensions, but with phenolic terminal board and solder lug terminals.

ADC PRODUCTS, INC.

AUDIO TRANSFORMERS FOR MILITARY AND COMMERCIAL APPLICATIONS

ADC offers the following designs to cover a wide range of standard audio applications, from low power transistors through heavy duty output circuits. They are conservatively rated at ± 1 db from 30 to 15,000 cycles at the maximum rated power. Each is designed for minimum insertion loss, is fully impregnated before potting and tested for dependable continuous duty operation.

These audio transformers are available in standard MIL cases, hermetically sealed to meet all requirements of MIL-T-27A. THE SAME RATINGS ARE ALSO AVAILABLE AS COMMERCIAL GRADE COMPONENTS, featuring the lower cost construction of a phenolic terminal board with solder lug terminals in the same drawn MIL cases.

MILITARY STANDARD AUDIO TRANSFORMERS

These Military Standard audio transformers have been specified by ASES and re-established by the three Military Services and the transformer industry as standards for Military transformer applications. Tests have been conducted in DC's environmental laboratory which indicate that these units will meet the requirements of MIL-T-27A, Grade 1, Class R operating temperature, life expectancy X (10,000 hours minimum).

NOTES:

¹These items are not normally carried in stock.

²'Split' indicates 2 separate, symmetrical windings. Impedances shown are for series connections. Where impedances are shown in parenthesis, they indicate the impedances resulting when windings are connected in parallel.

³Balanced, for Williamson type circuit operation.

⁴Has primary taps suitable for Screen loading

⁵Power response $\pm \frac{1}{2}$ db, 50-15,000 cps.

⁶Response is ± 1 db, 30-15,000 cps.

All of these designs are available on special order with output impedances of other values than shown above.

MINIATURE AUDIO TRANSFORMERS

These transformers offer a variety of special design features on a catalog basis for particular circuit and chassis applications. They are available for plug-in and printed circuit applications as well as standard installations. The special cases shown allow the maximum of electrical performance for each type as well as variety and flexibility in mechanical arrangement. All electrical ratings are shown for continuous duty at full specified power levels. Dia. $\frac{3}{16}$ ", Ht. $1\frac{1}{16}$ ", 2-56 Mtg. screws on $11/16$ " centers.

TELEPHONE COILS

For many years, ADC has been a dependable source of transformers and filters for the telephone and telegraph industry. Recently, we have designed and tooled for additional items in a series of "coils" which are electrically and physically interchangeable with similar components made by Western Electric. These items are listed below with the equivalent Western Electric number. All items in this series can be supplied in MIL cases if desired.

ADC REPEATING COILS

104A—Cord Circuit. This repeating coil is designed to have good transmission efficiency for voice frequencies. Low frequency ringing currents are attenuated and circuit will not ring through. Case is heavy steel to eliminate all cross-talk. Core will not saturate at maximum normal current.

104B—Phantom. The 104B Repeating Coil is a 4-winding coil, for use in phantom circuits. The phantom winding (5-6-7-8) is parallel wound. Heavy Formvar wire is used for maximum surge voltage or lightning protection. This coil has good transmission efficiency at both ringing and voice frequencies.

INDUCTION COILS

103A—Induction Coil is a 2-winding coil for local battery telephones.

103B—Anti-Sidetone Induction Coil is similar to 103A, but with an additional winding for anti-sidetone connection.

103C—Anti-Sidetone Induction Coil is designed for common battery telephone use.

MINIATURE TRANSISTOR AUDIO TRANSFORMERS

These high quality miniature transformers are high efficiency audio components featuring hermetic sealing for maximum protection against electrolysis and subsequent corrosion of fine wires caused by moisture penetration. The units are constructed in accordance with MIL-T-27A Specifications. Transistor transformers can also be supplied in an open or encapsulated type of construction.

MINIATURE AUDIO TRANSFORMERS

These high quality, miniature transformers feature hermetically sealing for maximum protection from moisture penetration with subsequent electrolysis and corrosion of fine wires. While primarily intended for non-military equipment, these units are constructed in accordance with MIL-T-27A Specifications.

Frequency response: ± 2DB 30-20,

MINIATURE TRANSISTOR TRANSFORMERS

These high quality miniature transformers are high efficiency audio components featuring hermetically sealing for maximum protection against electrolysis and subsequent corrosion of fine wires caused by moisture penetration. The units are constructed in accordance with MIL-T-27A Specifications.

Transistor Transformers can also be supplied in an open or encapsulated type of construction

PROFESSIONAL GRADE COMPONENTS

This group of components has been designed for use in high fidelity and professional equipment and for public address service. Freed has developed this series of units employing the latest design techniques and the best commercially available materials. Except for units carrying unbalanced direct current the frequency response is ± 1 DB from 30 to 15,000 cps. All units feature excellent performance characteristics with minimum size and weight.

All units are vacuum varnished and then potted in compound to insure long life and trouble free performance.

Professional Grade components are supplied cased. Upon request these units can be supplied open or in shell type construction.

All cased Professional Grade Components supplied with terminals meet "EIA" standards.

Transformers PGA 1 through PGA 10 are supplied in hermetically sealed cases.

HIGH "Q" REACTORS

QGC—are hermetically sealed, MIL-T-27A, Grade 4, Class R, High Q Reactors for low audio frequency application with an excellent inductance stability with variations of A.C. and D.C. currents, frequencies and temperatures.

SPECIAL REACTORS:

- (1) with a center tap (3) with inductances other than those listed can be supplied.
 (2) with a split winding

HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin**. Both hermetically sealed and molded units meet the latest military specification MIL-T-27A (graded 1 or 4 and 2 or 5 respectively.) Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending on the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

- SF Non-stabilized cores, $\pm 2\frac{1}{2}\%$ inductance variations from -55°C to $+85^{\circ}\text{C}$.
- SN Non-stabilized cores, $\pm 2\%$ inductance variations from -55°C to $+85^{\circ}\text{C}$.
- SE Temperature stabilized cores, $\pm 0.1\%$ to -0.4% inductance variations from -1.5°C to $+54^{\circ}\text{C}$.
- SB Temperature stabilized cores, $\pm 0.1\%$ inductance variations from $+13^{\circ}\text{C}$ to $+35^{\circ}\text{C}$.
- SD Temperature stabilized cores, $\pm 0.1\%$ inductance variations from -1.5°C to $+54^{\circ}\text{C}$.
- SW Temperature stabilized cores, $\pm 0.25\%$ inductance variations from -54°C to $+85^{\circ}\text{C}$.
- SM Temperature stabilized cores, $\pm 0.25\%$ -65°C to $+125^{\circ}\text{C}$.
- SP Temperature stable carbonyl iron cores, $\pm 0.3\%$ inductance variations from -55°C to $+85^{\circ}\text{C}$.

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied on request. Our engineering and laboratory facilities are available for consultation, research and development.

FREED TRANSFORMER COMPANY, INC.

FREED TRANSFORMER CO., INC.

MAGNETIC AMPLIFIERS AND SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm-up time, long-life components, ease of signal mixing and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast-response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

All standard units are designed for continuous operation and will operate in an ambient temperature range of -55°C to $+75^{\circ}\text{C}$.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors and magnetic components.

ALL ITEMS LISTED ARE AVAILABLE FROM STOCK.

FAST RESPONSE MAGNETIC AMPLIFIERS

The MAF Type of fast response magnetic amplifier combines high power gain, ruggedness, and reliability with a maximum 2 cycle response. All MAF units are phase-reversible.

TRANSISTOR CONVERTERS

THE FREED LINE OF DC TO AC AND DC TO DC TRANSISTOR CONVERTERS PROVIDE A HIGH EFFICIENCY VOLTAGE CONVERSION FROM BATTERY SOURCES TO AN AC LINE VOLTAGE OR HIGH DC VOLTAGE WITHOUT THE USE OF MOVING PARTS.

Freed Transformer Co. maintains a stock line of reliable, highly efficient static DC to DC and DC to AC converters. DC to DC converters hermetically sealed cans. RF filters included inside case.

The MAC Line of Static DC to AC Converters provide a highly efficient voltage conversion from battery sources to AC voltage without the use of moving parts.

The output voltage and/or frequency is directly proportional to source voltage variation. Special regulators can be supplied to compensate for this variation.

• RUGGED, QUIET, MAINTENANCE FREE, LONG LIFE OPERATION.

• HIGH POWER TO WEIGHT RATIO, ARC-FREE OPERATION.

TELEMETERING COMPONENTS

A complete line of Band Pass Filters, Low Pass Filters and Discriminators is available for multi-channel telemetry applications. These components cover the frequency range from 400 cps to 70,000 cps. The filters feature exceptional phase linearity, excellent selectivity characteristics and plug-in construction. The Discriminators, either fixed or slug tuned, have exceptional linearity, high amplification, and utmost stability.

TELEMETERING BAND PASS FILTERS

Hermetically sealed to MIL-T-27A and MIL-F-18327. These filters cover the frequencies from 400 c.p.s. to 70,000 c.p.s. Narrow frequency B.P.F. have a band width of 9% of center frequency and 45 dB (minimum) points $\pm 1\%$ of center frequency of higher or lower adjacent channels. Wide frequency B.P.F. have a band width of 19% of center frequency and 50 dB. points at $\pm 15\%$ center frequencies of higher or lower second adjacent channels.

FREED FILTERS

To MIL-T-27A and MIL-F-18327

Freed Standard Filters are Hermetically Sealed Miniature and Sub-Miniature high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

The standard filters are available in Low Pass, High Pass and Band Pass Filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency, 35db or more at 1.5 cut-off frequency and 40db or more at 2 cut-off frequency.

ILP Interstage Low Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LHP Line Low Pass Filter. Characteristic Impedance 500 to 600 Ω , in and out.

High Pass Filters: The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency, 35db and 40db or more at 0.67 and 0.5 cut-off frequency.

IHP Interstage High Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LHP Line High Pass Filter. Characteristic Impedance 500 to 600 Ω , in and out.

Band Pass Filters: The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency 40db or more at 0.5 and 2 center frequency.

IBP Interstage Band Pass Filter. Nominal input impedance—10,000 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step up 2:1. (Output voltage to source voltage.)

LBP Line Band Pass Filter. Nominal input impedance 500 to 600 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 9:1. (Output voltage to source voltage.)

SERIES 1950 NULL "T" FILTERS

The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of $\pm 2\%$.

All Null T Filters are hermetically sealed.

Prices on request.

TELEGRAPH TONE CHANNEL FILTERS

HERMETICALLY SEALED TO MIL-T-27A AND MIL-F-18327 SPECIFICATIONS

Freed Band Pass Filters are extensively used in multiplex frequency shift transmitting and receiving. Stock filters cover all narrow and wide band channels. All units are built with a standard octal socket.

FBT Transmitting Filters are built for a 600 ohm in and out characteristic impedance. Filter configuration allows paralleling of channel outputs. 10db adjacent channel crossover attenuation.

FBR Receiving Filters are designed for a characteristic impedance of 600 ohms in and out. Filter configuration permits paralleling of channel inputs. 20db adjacent channel crossover attenuation.

ULTRASONICS

New developments and applications of ultrasonics for industrial cleaning, soldering, welding, and many other uses have created a demand for generators and components specifically designed for ultrasonic applications.

Using the latest developments in the field of special magnetic materials the FREED ultrasonic transformers are designed for greatest efficiency and maximum reliability. They feature small size excellent performance and long life under continuous duty operation.

Transformers with an extended frequency range (frequencies up to 2 MC) can be supplied upon request.

COMMERCIAL GRADE COMPONENTS

These components are designed to meet the demand for low-cost replacement parts for commercial electronic equipment. The best commercially available materials have been utilized in the design of these units, to insure reliability and excellent performance characteristics. Vacuum impregnation with a non-hygroscopic varnish to prevent penetration of humidity are employed to give these units long life and trouble-free performance. 230-115 V, 50-60 C.P.S. Stepdown Transformers rated from 25 V A up to 5,000 V A Rating and line booster transformers are included in this series. All units, with only a few exceptions, are uncased or of shell-type construction. Isolation transformers and Stepdown transformers are equipped with line cord and receptacle.

GOTHAM

BEYER TRANSFORMERS

MINIATURE AUDIO

The BEYER line of miniature audio transformers distributed by GOTHAM represents over 30 years of experience in the field on the part of one of Europe's largest quality microphone manufacturers. It is for this reason that we make only one type of transformer in two sizes: A low level audio transformer suitable for microphones, tape playback heads, etc.

A special winding process permits these transformers to be made in this miniature size while maintaining studio quality frequency response, distortion, and level capability. The coil is wound on a continuous laminated core which means the elimination of the split core with its inherent losses. Result is a semi-toroidal construction with its superior resistance to hum induction.

BEYER transformers are used in professional audio equipment by such outstanding manufacturers as Ampex, Bauer, Collins, Precision Instrument, Rust, and many others. All transformers are made to special order to O.E.M. users' specifications. Samples can be supplied within 2 weeks, production usually within 4 weeks.

FOUR PHYSICAL MOUNTINGS ARE AVAILABLE:

Threaded Stud: The Model TR-45 Commercial Quality and TR-145 Studio Quality units are offered in mu-metal housing with threaded stud supplied with two nuts.

Solder Lug: The Model TR-45L and TR-145L are same as above but have radial lugs each end of housing to permit terminal board or Vector socket mounting. Also available in sub-miniature TR-710 Model (see fig.). Primary and secondary windings brought out opposite ends of mu-metal can.

Plug-in: The Model BV-36 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing with 7-pin miniature plug base. Same mu-metal shielding.

Printed Circuit: The Model BV-37 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing only 1.09" high with special 7-pin, 8-pin, or 9-pin printed circuit base.

ELECTRICAL CHARACTERISTICS:

Transformers are supplied with any turns ratio from 1:1 to 1:150, tapped and split windings, static shielding, high voltage test, vacuum impregnating or other requirements.

TYPICAL TRANSFORMER SPECIFICATIONS:

Model TR-145/BV35570 (This Model stocked)

Turns ratio	1:15 $\pm 10\%$
Impedance ratio	200/45,000 Ohms nominal
Frequency response	± 0.2 dB 20 - 20,000 cps.
Maximum input level at 1% THD	370 mV at 30 cps.
Primary open circuit inductance (50 cps)	6.0 H
Primary open circuit impedance (50 cps)	1000 Ohms
Primary DC resistance	70 Ohms
Secondary DC resistance	10,000 Ohms
Hum shielding (EIA std.)	> 70 dB.
BASIC PRICE IN QUANTITY OF 1000 UNITS	\$6.48 each

WOW & FLUTTER METERS

ME 101/102

The ME-101/102 instruments are intended for the measurement of the wow and flutter content of all types of recording and reproducing devices. They are fully transistorized, simple and convenient to use. The units are particularly suited for production testing and service work in addition to laboratory testing.

An internal signal generator provides the standard frequency of 3150 Hz. For the purpose of static and dynamic recalibration of the measuring unit, the generator can be detuned in a definite manner or can be frequency modulated from the power line.

Tone fluctuations from ± 0.02 to $\pm 2.5\%$ for the ME-101 and ± 0.01 to $\pm 0.75\%$ for the ME-102 can be read linearly or weighted as quasi-peak values (according to CCIR and DIN). Hence the properties of high quality tape and record playing equipment, as well as those of dictating machines and home equipment come within the ranges of the instruments. The fluctuation meter ballistics conform to the CCIR standard. A second instrument, the "drift" indicator, measures the frequency deviation of the recorded tone from 3150 Hz. Both indicating instruments can be switched to "rapid" or "slow" indication, as desired.

Besides the normal measuring connections on the front of the instruments, the back is provided with a connector for testing home tape recorders and record players. Other connectors are provided for the connection of external filters, oscilloscopes and graphic recorders.

SPECIFICATIONS

POWER: 110-125/220-240V, 40-60 Hz.

OSCILLATOR UNIT:

Measuring frequency: 3150 Hz (constancy 1×10^3 after starting up period).

Output voltage: Approx. 0.4Vrms at test output connector and approx. 20mV (p. p.) at auxiliary output.

Calibrating device: $\pm 2\%$ detuning for static and $\pm 0.3\%$ (60 Hz) for dynamic recalibration of measuring unit.

MEASURING UNIT:

Input voltage: 30mV to 30V, 3150 Hz $\pm 5\%$.

Input impedance: > 10 kOhm.

Measuring ranges: ME-101 ± 0.02 to $\pm 0.5\%$ and ± 0.1 to $\pm 2.5\%$; ME-102 $\pm 0.015\%$ and $\pm 0.75\%$.

Frequency response of fluctuation indication: Linear position, 0.50 to 500 Hz (-3 dB points). Weighted position, according to CCIR standard with external filter as required.

Drift indication: Max. $\pm 4.5\%$.

Auxiliary output: Approx. 20V peak to peak at 22 kOhm.

Dimensions: 7" x 8" x 1 1/4".

Weight: Approx. 11 lbs.

ME-101 — net price F.O.B. N.Y. \$375.

ME-102 — net price F.O.B. N.Y. \$395.

VARIABLE TRANSFORMERS

Manual uncased unit—exposed terminals

Manual cased unit—exposed terminals

Manual cased unit—enclosed terminals

The Volt-Pac variable transformer is a control device which provides continuously adjustable output voltage from a fixed line input to vary the voltage applied to a particular electrical load. With Volt-Pac units, output voltage is changed by flux transformation... in the unsaturated range of the magnetic core. The results... low cost, versatility, reliability, simplicity, and no wave form distortion.

Volt-Pac units, for surface or back-of-panel mounting, are designed for operation in ambients of —20C to +40C at full rated load, and under all load conditions have low electrical losses.

* When Overvoltage Connection is used, rated current should not be exceeded. Output kva for Overvoltage Connection is maximum output voltage times rated current.

† When using extended tap connections, operation is for 60 cycles per second only.

‡ Output at Overvoltage Connection is 0-132 volts.

§ When operated on lower input-voltage tap, rated current must be reduced when output voltage exceeds 140 percent of input voltage.

¶ For Line-voltage Connection only — No Over-voltage Connection provided.

■ For 240-volt input, 0-240-volt output, application only.

• For 480-volt input, 0-480-volt output, application only.

φ 60 cycles only.

PLUG-IN SETS

For laboratory or shop source of adjustable a-c voltage. Provides output voltage of 0-117% of input voltage. Equipped with a line switch and a fuse for overload protection.

Cord is 6 feet long.

MICRO-MINIATURE AUDIO AND TRANSISTOR TRANSFORMERS — MM AND MMT SERIES

MM-M (Fig. E): Molded, for plug-in printed circuit applications. Cast epoxy resin for high resistance to extremes of ambient temperature. MIL Type TF6RX — ZZ (Insert MIL No. from table). Size $7/8" \times 3/8" \times 1/2"$ with $3/32"$ pins, .020" dia. Weight, 1/2 oz. MM-H (Fig. F): Hermetically sealed with high compression glass terminals. Gray enamel finish. MIL Type TFRX — YY. Size, $1/4" \times 1/4" \times 1/4"$. Weight, $3/4$ oz. MM-FB (Fig. G): Open frame with channel on special order. MIL Type TFRX — ZZ. Size, $1/4" \times 1/4" \times 1/4"$, plus tabs. MM-CM (Fig. H): Con-tour molded on special order only, size $7/8" \times 1/2" \times 3/4"$. Designed for chassis mounting with solder terminals on top of transformer.

Miniaturized Transformers

POWER SUPPLY TRANSFORMERS

For silicon rectifier circuitry and filament applications. Hermetically sealed. Primary, 105/115/125 v. Output voltage given for resistive or inductive loads, based on approx. 1 v. drop per rectifier. MIL Type TF4RX01—(Add MIL Case Type from table) per MIL-T-27B. Fig. A except M8063 and M8069, Fig. B.

LOW LEVEL CHOPPER INPUT TRANSFORMERS

Efficiently transfers 30—500 cps. Transducer or thermocouple signals to instrument amplifiers. Resin impregnated to minimize mechanical vibration noise signal. Three mu-metal and two copper shields insure low hum pickup. Accurate center taps and external electrostatic shield connection improve low level operation. Signal level range. 0.5 μ v to 0.5 v. 90 db magnetic shielding. Size, $1\frac{3}{8}$ " dia. x $1\frac{1}{2}$ " h — 2 (6 x 32 x $\frac{3}{8}$ " stud), on $1\frac{1}{2}$ " centers. Weight 4.5 oz.

MODEL 400K TRANSISTOR TRANSFORMER SELECTOR KIT (FIG. C)

• IDEAL FOR BREADBOARD CIRCUITRY

• FULL DESIGN DATA

Set of nine transistor transformers covers impedance range of 150 through 200K ohms, matching most new transistor impedance ratings. Sizes range from a $\frac{3}{8}$ " cube to $\frac{3}{4}$ " x $\frac{3}{4}$ " x 1". All units vacuum resin impregnated for long, reliable life and for protection against rough handling. Each type has 4* color-coded leads. Includes full design data; nomographs and circuitry for determining correct impedances for Class A and B transistor amplifiers; power versus dbm chart; terminal connection sheet; guide to MIL-T-27B; cross reference index; outline drawings for later selection of stock items with same electrical ratings in many other mechanical constructions. Individually boxed in transparent plastic case. Model 400K Transistor Transformer Selector Kit Net Each **\$2950***

MICRO-MINIATURE TOROIDAL INDUCTORS — QG SERIES

QG-F: Open frame microcrystalline wax dipped with 4" #27 plastic leads. Size, $\frac{5}{16}$ " dia. x $\frac{1}{8}$ ".
 QG-M: Molded in high temperature epoxy resin with .020" x 2" gold plated nickel alloy leads.
 Leads may be bent downward for plug-in printed circuit use. Size, $\frac{7}{16}$ " dia. x $\frac{3}{8}$ ".

QGL SERIES

Frequency range, to 20 kc; accuracy, $\pm 2\%$.

Separate Sampling Department for quick delivery. Immediate service assured by large stocks of high temperature insulation and other specialized materials. IN-PLANT TESTING assures full compliance with military requirements and often saves weeks on contract completion. Units can be supplied to meet MIL-T-27B, MIL-T-9219, CAA-R-9786, MIL-E-5400, MIL-E-16400, MIL-E-4158, MIL-E-8189A, MCREE-553, MIL-T-21200, MIL-Q-9858.

RECTIFIER TRANSFORMERS

Transformers are with 2 — 18 volt center-tapped windings. Connected in series delivers 36 volts as rated. Connected in parallel — delivers 18 volts at twice rated current. (Taps 9, 18, 27, 36 V.)

Primary taps at 100, 105, 110 and 115 volts available on 12 amp, 24 amp, 30 amp and 50 amp transformers. No extra charge.

FILAMENT TRANSFORMERS—THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designed. All have 117 V. 50/60 cycle primary.

No DC isolation. † 20 watts.

North Hills wideband transformers have been designed for low insertion loss (less than 1 db) and good matching characteristics over wide frequency ranges. Balanced windings feature extremely low unbalanced voltages and have a center tap. Complete specifications are available upon request.

Several case styles are offered. Series AA models are potted in metal cases with a terminal board on the bottom and two 6-32 spade mounting bolts. Series BA are hermetically sealed with glass terminals at the case ends and two 4-40 studs on the bottom for mounting. Series BB is similar to BA except that the unbalanced connection is provided by a BNC connector. The above three styles are rated at 2 watts. Series FA, GA, and HB are hermetically sealed and are rated at 1/2 watt.

OHMITE Variable Transformers

Seven basic physical types meet most industrial requirements with long, maintenance-free life. Excellent regulation at any point within the rated load; free from wave-form distortion. U/L Listed for VT4 and VT8 units rated 120 volts input. Direct-reading 2-scale (1 per side) dial supplied; CCW also available. New space-saving low power types VT1, VT2 and VT3 have adjustable shaft independent of brush assembly, 3-way terminals, instantly replaceable brush contacts and improved heat dissipation. Mounting: Easily replace other brands: VT2LN, VT1, VT2 and VT3 have $\frac{1}{8}$ -32 lhd. bushing; VT8 and VT20, 4-hole bolt mount; VT4, 3-hole bolt mount convertible to 4-hole with adapter plate.

Enclosed Types: Gray wrinkle-finish cases. Units with suffix B have exposed terminal panel and mounting base; E, fixed type for table or panel mounting; F, portable with cord, outlet socket and fuse; G, deluxe portable with handle, circuit breaker and switch for overvoltage selection. Final suffix: V indicates with voltmeter; VA, voltmeter; VW, volt/wattmeter; all come with handle except VT8NF series. Other Options: All transformer types except the VT2LN offer shafts, extendable from either brush or base side; ganged versions have thru-shaft, with same flexibility. Types with final suffix C come with 3-conductor input and output with one grounded to case.

*Minimum; max. of 400 cps for all models. †Use also at 50 cps if connected at no overvoltage output. ‡With 120 V input tap at which the max. current output rating applies up to 120 volts, but reduces approx. 50% at max. output voltage shown. In tandem units, the use of low voltage inputs would halve the rated input and output voltages. §User wires for desired output; dial normally calibrated for overvoltage. #Factory-connected for overvoltage output; easily re-connected by user for no overvoltage. *Switch selects overvoltage or no overvoltage. *53‡ including handle. *Case height only, excluding handle. ‡Depth behind panel; add 1" for knob thickness for VT8 types; 3/4", VT2 or VT4 types; 1 1/4" for VT20 types. 19" including handle. †Including knobs, dial and hardware.

OHMITE Variable Transformers

MULTIPLE, IN-TANDEM TRANSFORMER ASSEMBLIES

SINGLE-PHASE, TWO-IN-TANDEM ASSEMBLIES

Normally wired for series connection; when so connected, load cannot be grounded. Standard CW dial 240/280 volts except VT02 tandems where 240/264 V dial is supplied; on VTSH-2, 480/560 volt dial is standard. Other dials available as listed elsewhere on these pages.

METHOD OF DETERMINING SECONDARY CURRENT RATING

Since our transformers may be used in many possible configurations, the current shown is rms secondary winding current. Secondary current ratings are rms ac values, NOT dc values. When selecting the "Secondary Amp" rating, the conversion chart at the right should be used.

HIGH CURRENT CHOKES

HIGH CURRENT CHOKES

Signal's line of High Current Chokes is the most extensive available. It is designed to complement the selection of High Current Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full rated DC current. All resistance ratings are maximum values.

Special variations or intermediate values of Inductance, current, or resistance can be supplied promptly and accurately.

INDUCTANCE VARIATION WITH DC CURRENT

The curve shown applies to the whole line of chokes. It allows the user to determine the value of inductance which will be obtained at intermediate and overload values of DC current. The values on the curve are stated in generalized coordinates of % inductance versus % DC current.

For example, the CH-100 at 50 amperes (50% DC Current) will have an inductance of 0.75 MHY (150% of rating), the CH-25 at 31 amperes (125% DC current) will have an inductance of 3.5 MHY (70% of rating).

It is not recommended that chokes be used at over 100% of rated current since temperature rise will then be excessive. However, if load current is intermittent, and RMS current is less than maximum rated current, it is permissible.

Special "swinging chokes" can be supplied where the slope of this characteristic is emphasized. Specify minimum inductance required at two current values (usually maximum and minimum current) and we will furnish prompt quotations.

At higher power loads (above 2.3 KVA) It becomes inefficient to use single phase 115 or 230 volt standard lines. With this in mind, our engineering staff has developed a line of 3 phase transformers for use off 208 or 220V 3 phase power lines. These offer the significantly higher

conversion efficiency and lighter power line drain of 3 phase system. Since the principal application of these items is in high power power supplies, output ratings are given in dc voltage and current assuming the use of a 3 phase full wave rectifier.

As shown on the schematic diagram dual primaries are provided. This permits parallel connection for 104, 110, or 120 volts or series connection for 208, 214, 220, 230, and 240 volts. Frequency range is 50 to 500 cps.

It is important to note that primary taps may be used to adjust the secondary voltages. Line voltages up to 125V (parallel) or 250V (series) may be used on the lowest primary tap. Nickel plated screw terminals are provided on a heavy phenolic board for easy primary connections.

GRAIN-ORIENTED STEEL CORE

These cores permit the use of higher peak flux densities for the same core loss. This results in a lower number of turns required and therefore, a smaller, more compact transformer.

STRIP-WOUND SECONDARIES

At the heavy current used in this line it becomes practical and desirable to use wide copper strip (as wide as the coil itself) for windings. Besides the obvious advantages of excellent winding space factor, the heat dissipation of the coil is improved. This improvement is due to the fact that the heat generated in the windings has a pure

copper path to the coil ends, where it can be dissipated. In conventional windings of many turns per layer this heat flow is impeded by wire insulation and air spaces between turns. Therefore, the use of copper strip windings yields a dramatic reduction in size and weight.

CLASS F INSULATION USED THROUGHOUT

Class F insulation is rated for unlimited life at a total temperature of 155°C (ambient plus temperature rise).

Class A insulation has a maximum temperature rating of 105°C. The "nominal" current ratings given to this series are for a temperature rise of 45°C above 55°C ambient (Class A). Since Class F insulation is

used it is permissible to increase these ratings by 40% (700 and 1400 amperes) without reducing the reliability of the transformer. The temperature rise will be 100°C over a 55°C ambient. The only limitation is not the transformer, but the temperature rating of surrounding components which may be affected by the additional heat radiated by the transformer.

INDUSTRIAL GRADE STEP-UP OR STEP-DOWN POWER ISOLATION OR AUTO-TRANSFORMERS

HIGH DEGREE OF VERSATILITY OFFERS MANY POSSIBLE VOLTAGE RATINGS

AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU" and "UP" lines are designed for a maximum of 55°C rise above ambient, for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated, and have a consistently uniform appearance. All ratings are at full load current, continuous operation.

Heavy 1/4 inch phenolic terminal boards are provided with plated brass screws and flat washers. Connections can be easily made with a nut driver. It is also simple to alter the inter-connections to change transformer ratings.

"DU SERIES" 110/220 Dual Primary To 110/220 Dual Sec.

As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as

208, 214, or 230 volts.

It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is doubled.

"UP SERIES" 110/220 Dual Primary To 0/130/135/140 V. Sec.

The "UP" line utilizes the same dual primary as the "DU" line. It has, however, a single secondary rated at 0/130/135/140 volts. This type is quite useful to boost low line

voltages or raise line voltages to compensate for drops in series elements. It also finds application in bridge rectifiers for DC voltage outputs of approximately 115 to 130 volts.

SIGNALS CUSTOM SERVICE

Many of our customers do not realize that the major portion of our shipments consists of "special" or "custom" items.

Usually, the final application of one of our stock transformers does not require the full number of taps or windings provided. These naturally are part of the cost of the item. If

we are advised as to the specific taps used as to what intermediate voltage or current required we can begin production quickly on the variation of our stock item. If we define production quantities as roughly over 50 pieces, the customer will do better price-wise on his custom made item than on the standard.

Adjust-A-Volt® VARIABLE AUTO-TRANSFORMERS

Industries widest selection of adjustable variable auto-transformers designed to deliver variable output voltages with high efficiency, reliability and minimum maintenance. Ratings from .165 to 265 KVA. Bench and panel mounting. Manual or motor driven. Single or ganged assemblies. Military designs, specials, 36 volt types. All Adjust-A-Volts feature zero wave form distortion with high voltage resolution, and regulation with conservative ratings. Design features rugged mechanical construction and precious metal-plated commutators.

Brush design provides smooth flow of input current and voltage and ease of brush replacement which is seldom required. All Adjust-A-Volts operate on 50/60 cycle current except certain SQ models which are 60 cycle*. Operation is permissible at 50% of rated power output. Bench models are housed in grey wrinkle painted die-cast aluminum cases equipped with pilot light, switch, line cord, and an output receptacle. Write for complete catalog.

**AUTOMATIC, INSTANTANEOUS VOLTAGE
REGULATION FOR A WIDE VARIETY
OF ELECTRIC AND ELECTRONIC DEVICES**

Constant-voltage Sola transformers provide a stabilized output voltage even though the input voltage varies over a considerable range. Their applications are numerous and varied. CV's are especially ideal for high-accuracy requirements such as in computers and data-processing equipment.

Another advantage in CV transformers is their ability to prolong the life of electronic components by eliminating injurious over- and under-voltages. The Sola transformer's current-limiting factor protects semiconductors and other components from excessive inrush and fault currents.

Letter following a catalog number designates units which may be converted to cord input and receptacle output. See Adapter Kit table on page 1425.

Outline dimensions are the overall outside dimensions of the unit, not including separate capacitor where employed. Dimensions are subject to manufacturing tolerances of $\pm 1/32$ to $\pm 1/8$ inch.

± 1% REGULATION FOR FILAMENT TYPE,
± 3% FOR PLATE-FILAMENT TYPE

The electronic-power type of Sola transformer is designed as a component for simple assembly into many kinds of electronic equipment. The filament type (CVF) provides 6.0 or 6.3 volts of output regulated within ± 1% over line variations of ± 15%; the combination plate-and-filament type (CVE) regulates within ± 3%.

*Voltage values are taken at output of 5Y3GT rectifier for No. 7104 and No. 7106 transformers and at output of 5U4GA-GB for No. 7107. Guaranteed regulation of ±3% on plate voltage output is contingent

on the use of Sola-regulated 5.0v filament supply winding for the rectifier tube.

Mechanical Structures*"STRUCTURE CODE" LETTER REFERS TO ONE OF THESE GENERAL TYPES OF MECHANICAL ASSEMBLIES:**

B — Drawn case, integral capacitor unit, flex leads.

S — Hermetically sealed case, separate capacitor, solder lugs.

E — Exposed core; end bells; separate capacitor, flex leads.

W — Exposed core; end housings; screw-type terminals in outlet box.

Y — Same as W, but duplex assembly.

Z — Same as W, but triplex assembly.

Cord/Receptacle Adapter Kits

Adapter kits may be used when the convenience of input plug and output receptacle is preferred to the standard arrangement of terminals in the transformer housing. See accompanying chart.

Code	Adapter Kit Catalog No.	Input Cord	Output-Connections	Net price each to industrial users
(a)	999-004	2-wire	2-wire receptacle	\$1.75
	999-018	3-wire	3-wire receptacle	2.50

The transformers described in this folder are manufactured under one or more of the following United States Patents: Nos. 2,694,177; 2,753,513; 2,806,199, and patents pending.

When you use STANCOR STANDARD Transformers you are assured of . . .

Immediate Availability — sold by over 150 Industrial Electronic Distributors in major marketing areas — AT FACTORY PRICES IN ANY QUANTITY.

Highest Quality — Stancor has specialized in manufacturing millions of standard transformers, time-tested and field-proven for over 35 years.

Stock In Depth — over 300,000 transformers stocked in Chicago with branch warehouses at Atlanta, Dallas, Los Angeles and Hackensack, N. J. **Bulk shipments from Chicago, only.**

Service Replacement — available from over 100 Industrial and Service Parts Electronic Distributors located in over 500 cities throughout the U.S.

Competitive Prices — mass production facilities — to supply its extensive distributor organization — enable Stancor to manufacture at lowest costs.

STANCOK OUTPUT TRANSFORMER CHART

audio transformers

A simplified selection of the proper transformer for use as a replacement in radio receivers or in the construction of audio amplifiers. To use this chart, check the first column for the tube being used, then read across for the applicable operating characteristics and correct Stancor transformer. In most cases, two Stancor part numbers are indicated in order to give a choice of Mounting styles.

ULTRA MINIATURE

are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are larger than the transistors they power.

These transformers are designed primarily for transistor audio applications but they can be used over low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations.

Stancor's broad line of commercial grade power transformers offers a choice of standard mounting styles. Listings are in ascending order of plate-supply voltage for ease of selection.

All units are designed and built to meet the exacting requirements of EIA for electrical tolerances, dielectric strength, temperature rise and construction. All are insulated with class A materials; (105°C max. operating temperature).

Transformers designed for full-wave C.T. rectification with capacitor input filter may be used with choke input filter allowing an increase in D.C. current of 30%.

Transformers designed for full-wave C.T. rectification with choke input filter may be used with capacitor input filter requiring a decrease in D.C. current of 25%.

Note: Filtering shown permits maximum output ripple voltage of 3% or less.

*Quantity Shown is Total Number used in a given circuit. Rectifiers should be equivalent to Sarkes Tarzian numbers shown.

*Surge protection resistors are recommended when capacitor input filters are used. Allow 3.3 ohms per 70 volts R.M.S. applied voltage. Transformer secondary winding D.C. resistance may be used as part or all of the amount required.

SILICON OR SELENIUM RECTIFIER TRANSFORMERS:

Primary — 117 Volts 50/60 Cycles.
Solder Lug Termination

These transformers have been designed to operate in full-wave enter tap or bridge rectifier circuits. The D.C. voltages shown are approximate since they depend on the internal drop of the rectifiers used.

Primary taps and an additional buck or boost tapped winding provides a wide range of output voltages. For detailed terminal connections, output voltages, etc. write for bulletin 518-R. For matching high current chokes see page 20.

POLYCHROMATRANS With Multiples of 0.1" Grid Spacing for Printed Circuits.

COLOR CODING by application to assure immediate and positive transformer identification.

RECTANGULAR SHAPE allows the utmost utilization of space and stacking in limited area.

PROTECTIVE STAND-OFF prevents solder flow-back and maximum lead exit protection.

SPACED LEADS of fatigue resistant gold plated nickel-iron alloy are .020" in diameter, 9/16" long and have multiples of 0.1" grid spacing for printed circuit application.

PULSE TRANSFORMERS AND DECADE INDUCTORS

Type 11Z

TRIGATE* PULSE TRANSFORMERS FOR LOW-COST SCR CIRCUIT APPLICATIONS

- Specifically Designed For Commercial and Industrial SCR Triggering Applications Where Low Cost and Excellent Performance Are Required
- Balanced Pulse Characteristics and Energy Transfer Between Windings
- Minimum Saturation Effect To Allow Operation Where Increased Pulse Widths Are Required
- Fast Pulse Rise Time and Increased Current Capability To Prevent SCR di/dt Failure
- Operating Temperature Range of -10°C to $+70^{\circ}\text{C}$
- For Complete Technical Data, See Latest Issue of Sprague Engineering Bulletin 40003

TYPE 850W PRECISION DECADE INDUCTORS

- Indispensable For Design and Experimental Work on Audio Filters, Equalizers, and Tuned Circuits. Frequency Range is 150 to 20,000 Cycles per Second
- Excellent Stability With Respect to Current and Ambient Temperature Changes
- All Four Decade Inductors May Be Connected in Series to Provide 11,110 Steps of Inductance
- Housed in Blue Aluminum Case with Sloping Front to Facilitate Bench-Top Readings. Measures 3" Wide, 2 1/2" High, 5 1/2" Long. Fitted with Five-way Binding Posts.
- For Complete Technical Data, Refer to Latest Issue of Engineering Bulletin 90,500.

STERLING TRANSFORMER CORP.

POWERSTAT® Variable Transformers now

New epoxy-coated POWERKOTE Coils make the POWERSTAT line the most outstanding value in variable transformers today. *Without increase in price, size or weight*, only POWERSTAT Variable Transformers give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. POWERKOTE Coil commutator bars are embedded in place preventing steady-state operating temperature and severe overloads from distorting the commutator.

POWERSTAT Variable Transformers are designed to deliver continuously adjustable voltage from a-c power lines. They introduce no waveform distortion and feature rugged construction, precious metal plated commutators, excellent regulation, high efficiency and conservative ratings. All manually operated types listed in the charts except the 10B-12, EN116B-EN216B and EN117B-EN217B Series are available with motor drives if desired. Motor-driven speeds are 5, 15, 30 or 60 seconds for full range travel on all except types having -4, -5, or -6 suffixes which do not offer the 5-second speed. Single types in the 116B-216B, 117B-217B, 126-226 and 136B-236B Series are also offered with 2- or 3-wire cord-plug sets. 1156D-1256D Series types are available in ratings to 244 kva.

**STATIONARY
METERED KNOB
TYPES**

Single units (those listed in charts without -2 or -3 suffixes) in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 series are also available with metered knobs. Stationary voltmeter does not turn with knob. Voltmeter accurate within $\pm 2.5\%$ of full scale and insensitive to stray magnetic fields. When ordering, add VS prefix to type number. Back-of-panel mounted types in the 21-22 through 146-246 series can be combined with Metered Knob Assemblies. Existing models can be retrofitted also. Assembly type VS150 has a 0-150 volt scale and type VS300 has 0-300.

†Also available with open construction. Suffix U when ordering.
‡Requires also one paralleling choke type 15000.
§Requires also one paralleling choke type 16053.

POWERSTAT® Variable Transformers

NOW WITH POWERKOTE® COILS

40-VOLT SERIES

Meet high current, low voltage requirements of low voltage power supplies and a wide range of transistor circuit applications. Manually-operated and motor-driven single, 2- and 3-gang single phase types available.

TYPE 108-40

TYPE 21-40

TYPE LC2106D

TYPE 5MLC2115E

LINE CORRECTORS

Used to correct line voltage variations to maintain a constant output voltage or to supply a limited range of output voltage from a stable a-c source. Manually operated and motor-driven types available.

OIL-COOLED AND EXPLOSION-PROOF

Oil-cooled units substantially increase ratings above equivalent air-cooled types and provide a measure of safety. Explosion-proof models are Underwriters' Laboratories listed for Class 1, Group D service. Both are manually operated only.

OIL-COOLED
TYPE 0-116BEXPLOSION-PROOF
TYPE X-116

LW136B SERIES

Have three windings. Connections can be made for operation as a source of adjustable low output voltage, a line voltage corrector or a limited range variable transformer. Manually operated and motor-driven, open and enclosed construction types available. Full connections and ratings on request.

HIGH FREQUENCY POWERSTAT® VARIABLE TRANSFORMERS

TYPE 5-1011

TYPE 1HMD07CKI

TYPE AM1HMS07U

Standard types designed to meet applicable military specifications are available: manually operated and motor-driven types for 28, 120, 240 and 480 volt, 400/800 cycle single and three phase operation in ratings from 56 VA to 8.7 KVA; manually operated types for 115 volt, 400/800 cycle single phase service with outputs of 0-28 volts, 2.5, 5 or 8 amperes and 0-5 volts, 6 or 12 amperes; manually operated types for 400/1600 cycle service as limited range variable transformers, low voltage output variable transformers or line correctors.

SOLIDSTAT® Variable Voltage Controls

- SOLID-STATE VOLTAGE CONTROL
- 6, 12 AND 24 KVA MODELS
- 120, 240 AND 480 VOLT TYPES

TYPE CSR106

Solid-state, semiconductor variable a-c voltage controls for all loads from unity power factor to zero power factor lagging inductive load. Operating on a closed-loop, error-detector principle, they can be controlled by a potentiometer, by a current feedback sensing circuit or by a voltage sensing circuit. Any load from zero up to the full rating can be controlled with an efficiency of 98% or higher. Have unique lock-out overload protection circuit. Provide instantaneous response and are insensitive to line or load voltage changes.

FLEXIFORMER® Packaged Transformer Primaries
 ● A SOURCE OF A-C VOLTAGE ● A CURRENT TRANSFORMER ● 150 VA AND 1000 VA TYPES

These "do-it-yourself" transformers are essentially self-contained toroidal primary coils encased in durable high impact plastic. Colored SUPERIOR 5-WAY Binding Posts for connections are integrally mounted. When used as a source of a-c voltage, the center opening permits hand-threading the correct number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the FLEXIFORMER winding is shunted by an ammeter which indicates the current flow in a conductor hand-threaded through the center opening. Can be used as portable units or permanently mounted. Request free copy of "Experiments Using FLEXIFORMER Packaged Transformer Primary."

VOLTBOX®
 A-C Power Supply

TYPE UC2MB

Compact versatile instrument containing all the necessary components for tests involving a-c voltage: POWERSTAT Variable Transformer, direct reading voltmeter, three output receptacles; two SUPERIOR 5-WAY Binding Posts, "on-off" switch, line-load meter switches, fuse and 6-foot cord-plug. Designed for 50/60 cycle service. Type UC1MB ratings are 120 volt input and 0-140 volt, 10 ampere, 1.4 KVA output; type UC2MB ratings are 240 volt input and 0-280 volt, 3.5 ampere, 0.98 KVA output. Other types available on special order.

STABILTEMP®

Proportioning Temperature Coupler

TYPE PTC5

Maintains voltage needed to keep electric furnaces and ovens at correct temperature when incorporated into systems using commercially available current proportioning temperature controllers. Use with cataloged motor-driven 120 or 240 volt, 50/60 cycle single phase POWERSTAT Variable Transformers. Voltage is regulated at any point within the range of the POWERSTAT as determined by the controller current command signal regardless of variations in line voltage or load current. Type PTC5 rated for 5 milliamperes maximum command signal; user provides resistors for 20 or 50 milliamperes signals.

OHMSTAT™
 Slidewire Resistors

TYPE SWR5C

Feature unbreakable, high-temperature coated, split aluminum tube with stainless steel spring expansion compensator. Operates at peak rating with no slackening of wire turns. Excellent heat conducting properties of aluminum prevent "hot spots." Slider bar is chrome-plated brass; double sliding contact provides reliable connection with resistance wire. Negligible inductance through 400 cycles. Screened for user protection. Baseplate shields mounting surface.

This series of high current transformers and chokes are most widely used for high power rectifier and high current A.C. applications. It is one of the industries most popular items. All types are designed for a nominal temperature rise of 45°C at full load and will easily withstand unusual overloads. The regulation is extremely low, varying from 5% on the smallest unit to 1% on the largest. All units have name plates and wiring diagrams for installation ease, future reference and permanent identification.

Five constructional types are available for maximum flexibility for use in either the laboratory or production.

HORIZONTAL BRACKET MOUNT (STYLE B) is an "open" unit, double vacuum varnish impregnated to insure long life and give maximum protection against humidity.

EPOXY UNITS (STYLE BE) are electrically and mechanically identical to style B and are vacuum encapsulated to withstand environmental conditions per MIL-T-27B, Grade 3, Class S. **SHELL ENCLOSED (STYLE V)** offers excellent mechanical protection to the coil. This is in addition to functional appearance and the ease of "wiring with leads." Double vacuum varnish impregnation further assures adequate moisture protection and long life.

CAN ENCLOSED (STYLE C) units are ruggedly constructed and embedded in a rigid potting compound to insure maximum heat transfer. Professional Todd built enhances any chassis.

HERMETICALLY SEALED (STYLE CM) units are manufactured to MIL-T-27B, Grade 4, Class S to withstand the most rigorous environmental conditions. **CONTACT TODD FOR CUSTOM VARIATIONS**

TODD ELECTRIC HIGH CURRENT CHOKES are the perfect companion to our High Current Transformers when utilizing inductive filtering in designing a power supply.

INDUCTANCE VARIATION

The inductance realized from any stock High Current Choke will vary from the nominal rated values as shown by the graph when subjected to a non-rated current. Steady state current of over 115% is not recommended due to its greater heating loss but may be used for intermittent operation.

Triad J Series offers flexibility enabling your amplifiers to exceed broadcast standards. Although economy in construction has cut costs, these transformers approach and closely approximate performance characteristics found in more costly hermetically sealed parts. Single hole mounting provides for rotation for maximum reduction of hum... alloy shielding gives you 40-60 db hum reduction (60-80 db in Types A-11J & A-12J)... you can obtain wide frequency ranges... flexible leads facilitate ease in mounting... input units are electrostatically and magnetically shielded... light weight and encased in Triad's satin smooth baked gray enamel cases, 1 3/4" diameter, 1 3/4" above chassis... legible circuit diagrams are permanently affixed to every case.

Combined PLATE and FILAMENT Transformers "100" Series

Never have the outstanding features of Triad Combined Plate and Filament Power Transformers been available at such realistic costs. No quality or performance requirement has been overlooked...specify Triad and be certain. Shielding, impregnation, chatter freedom ...to Triad's demanding quality control standards.

Height of transformers in BC cases is measured from chassis line to top of case. Copper shading ring on all BC cases to reduce external magnetic field.

Note: Last letter of Type No. denotes case style.

AUDIO

Triad Replacement Output Transformers furnish a wide range of size and mounting characteristics... specifically engineered for mounting in precise location in chassis. Climatic treated... manufactured to exacting quality standards of more costly types... progressively designed for advanced circuitry and audio tubes... total complete coverage over impedance and wattage ranges... Triad units provide finest response in minimum space... and outlive all others.

CHOPPER INPUT TRANSFORMERS

Triad Chopper Input Transformers provide exceedingly close balance between the two halves of the primary winding . . . minimum noise in microvolt ranges of input signals is assured with Triad's special core treatment techniques. For demanding transistor and tube applications, Triad's special design capabilities have an outstanding record. For special applications, consult Triad.

TOROIDS

Triad toroids may be ordered with standard leads in strong plastic coating, or epoxy molded encapsulated per Specification MIL-T-27A; TFSRX20Z. To specify molded toroids with gold-plated fixed terminals, an "A" should be added to the full type number; for example, EM-001A.

Sub-miniature Encapsulated TOROIDAL INDUCTORS

Triad sub-miniature toroidal inductors, designed for quick, easy printed-circuit board mounting, are now stocked for immediate delivery in a range of standard ratings from 50 micro-henries to 500 milli-henries. Many uses, especially in airborne telemetry applications incorporating Triad's sub-miniature filters FL-384 through FL-388. Case size of units is 7/8 inch diameter by 1/4 inch high. Providing an optimum combination of high Q and extremely small-size, this series is ideal for printed board, transistor or vacuum tube application.

Triad sub-miniature inductors are toroidally wound on permalloy powdered cores. Encapsulated in high temperature epoxy resin. Weldable or solderable leads of gold plated nickel alloy. Highly resistant to severe acceleration, shock or vibration. Manufactured to MIL-T-27A, Grade 5 Class S (MIL type TF5SX20ZZ).

NOTE: Ma. DC maximum is for approximately 5% drop in inductance. Those figures marked * will give less than 5% inductance drop but should not be exceeded under operating conditions.

Inductance tolerance of EX-P05A through EX-P50A is $\pm 5\%$; EX-001A through EX-500A is $\pm 2\%$.

Inverters-DC-to-AC

Recent developments in the power transistor field have made possible the design of circuits which are efficient and rugged converters of low voltage DC to high voltage AC or DC power. These transistorized power supplies are ideally suited for powering all kinds of battery operated equipment such as mobile communication systems, television and marine navigational systems, photoflash, electronic applications and even 117V 60 CPS from an automobile battery so as to operate 117V radio, television, electric shavers, etc. These transistor power supplies provide a wide range of voltage and power to those who want. Complete instructions supplied with each transistor.

Designed specifically for use in single transistor blocking oscillator circuits. The DC output voltage of TR 464 is rated for a quadrupole rectifier circuit and may vary from these ratings due to bias and component values. All other DC voltage ratings are with 1/2 wave single output filter input.

Chokes									
Designed and built to meet MIL-T-278 specifications. These units provide the maximum inductance at the given current rating in a minimum size. All AJ, FA, GA, etc. case sizes are identical to MIL-T-278 specification.

Dual Winding - Chokes and Inductors

Designed and built to meet MIL-IT-27B specifications. These units provide the maximum inductance at the given current ratings in a minimum size. All AJ, FA, GA, etc. case sizes are identical to MIL-IT-27B specifications.

Audio Inductors

Designed and built to provide a full range of inductance and current ratings in epoxy molded, enameled, and encapsulated units. .05 H, to 430 H, at inductance of less than .5%. Units marked * have a tolerance of .3% and 0.5 Q of 22 or more of approximately 1,000 cycles. Units marked † have an inductance tolerance of .2% and 0.5 Q of 25 or more at 17,000 cycles for low inductance units and 400 cycles for high inductance units. Substitution is permitted for all units with over the MIL-IT-27B temperature ranges.

PRIMARY 105/115/125 VOLTS 300-1,000 CYCLES

These transformers have been designed to meet all requirements of MIL-M-275B for their class of operation. All B, CA, and SA class tubes are identical to MIL-M-275B specifications. These units meet the rigid requirements for strength and mechanical construction, control equipment, ball-bearing guided filament controls, a main filament, or, as in any field where maximum sealing against air is prime requirement.

Multi Shielded-Line Isolation

50/60 CYCLES

These Multi-shielded line isolation transformers have been specifically designed for critical circuitry where minimum coupling capacity is imperative and battery-type isolation is desired. 2V247, 2V248, 2V249 are vacuum potted with epoxy resin in standard MIL-T-27B cases and have less than .03 MFD coupling between windings. Other units in YY cases have coupling capacities of less than .1 MFD. 2V243 is for 400 cycle operation only.

Band Pass Filters

These units have been designed and built to meet MIL-F-18327B for their specific class of operation and are high performance units applicable to production or laboratory communication and electronic equipment. They have been carefully adjusted to the specified frequencies with proper input and output impedances.

Coupler impedances indicated, "To Grid" should be terminated in a open grid circuit. Tapped outputs - marked (*) - provide for either 10,000 ohm termination or high impedance grid termination.

Telemetering Band Pass Filters

These units have been designed and built to meet MIL-F-18327B for their specific class of operation.

The Steel Jacket filters in YY case are designed with a 4 pin plug-in type terminals and the Molded Case units have straight wire terminals. Twenty-three separate channels are provided with a choice of either Molded or Steel jacket case types.

THORDARSON MEISSNER

MIL-T-27B Low Frequency High Q Inductors

These inductors have been designed and built to meet the requirements of MIL-T-27B for their specific class of operation. Constructed with only the highest grade materials these units have magnetic shielding as well as humbucking construction. Designed to a Q of 40 or more at frequencies ranging from 60 to 300 cycles. Split winding termination permits series, parallel or series center tap connections, such as might be used in filters, tuned circuits or coupling inductors.

Pulse Transformers

DESIGNED AND BUILT TO MEET MIL-T-21038

Tube Type

When used as coupling transformers this group of units have the following additional parameters: Overload ranges from 5 to 20 milli-seconds with the lower overload at the higher pulse width. Output voltage of 15 to 25 volts may be expected with a normal drop of 10 to 15 %. Blocking oscillator overloads are held to less than 2%.

Pulse Transformers

DESIGNED AND BUILT TO MEET MIL-T-21038

Transistor Type

Additional parameters for these transistor type pulse transformers are: 1% overloads in almost all of these units. Output voltage of approximately 8 volts may be expected with no drop on units below 15 micro-seconds pulse width and approximately 10% drop on units above 15 micro-seconds pulse width. The blocking inductor will be 20-30% when connected in the transistor blocking oscillator circuit.

Molded And Plastic Coated Toroid Inductors

These High Q Toroid Inductors have the highest inductive stability available to the industry. Each coil is on an inductance tolerance of plus or minus .2%. Available in either plastic coated units with leads (TOR 800 and TOR 900 series) or in epoxy molded MIL-1-27B encapsulation (TOR 700 and TOR 7100 and up).

Autoformers

50/60 Cycles

These Autoformers provide a smaller and more economical method of changing from 115 to 220 or 220 to 115 Volts. They provide correct line voltages for machine tool control units such as sequence timers, solenoids and lighting systems.

Line Voltage Regulators-Autoformers-With Meter

These Line Voltage Regulators provide the correct voltage to radios, TV sets, air conditioners, refrigerators, deep freezers, automatic washers and many other appliances, even with variation in line voltage of 45-75-90-100-110-120 or 145 volts. They are also useful in altering the 115 volt line above and below the line voltage. An output receptacle and volt meter are internally connected to the 115 volt line. All units are supplied with 4-1/2 line cord and plug. All units have GMV Type Mounting with Meters.

D-1 MOUNTING.

DRY TYPE GENERAL PURPOSE TRANSFORMERS are supplied in either double winding isolation or single winding auto-transformer type for 50/60 CFS applications. Either type may be single phase or connected in a group of three for three phase. All units have Class B insulation for 80°C rise except the units marked 2 1/2°C for 55°C rise. Each unit has a knock out for the CASE AND JUNCTION BOX. A stamped steel enclosure encloses the entire coil assembly and presents an attractive appearance. The winding box is an integrated part of the case and provides easy access and wiring to the individually marked primary and secondary terminals. Knock out for the junction box for attaching conduit. Complete with mounting hardware. Wiring diagrams and INSTRUCTIONS are furnished with each unit. On the inside of the junction box cover, a detail shows the schematic diagram and ratings of each transformer.

APPLICATIONS

- To provide 120 Volt Lighting or 120/240 Volt Power from 240-480-600 Volt distribution circuits.
- To isolate or protect lighting circuits from power circuits allowing the use of grounded or ungrounded circuits.
- Independent of power or other lighting circuit grounds.
- The auto-transformers provide a smaller and more economical method of voltage changing. These auto-transformers may be used to obtain 120 Volts from a 240 Volt circuit, to establish a neutral ground from a 240 Volt circuit, or to balance the 120/240 Volt loading on a three phase line to obtain lower demand billing by the utility company.

Control Transformers - Machine Tool Type

MACHINE TOOL TYPE CONTROL TRANSFORMERS are double winding isolation type for 50/60 CFS applications.

They feature rugged design, compactness, and low regulation at economical prices. WIRING DIAGRAMS and INSTRUCTIONS are furnished with each unit. Screw terminals are provided to facilitate wiring connections.

APPLICATIONS

- To provide 115 Volt Power or Lighting within machine tools or other equipment from 220/240 Volt primary circuits.
- To permit direct grounding lighting or control circuits independent of power distribution grounds for greater operator safety.

MIL-F-18327B Specifications

These filters meet today's need for flat component configurations, have excellent attenuation characteristics and are ruggedized to Grade 4. MIL-F-18327B. Straight pin terminals and flat construction make these units ideally suited for printed circuit applications. These filters are hermetically sealed in flat metal cases shielded to reduce hum pickup. FP-A case: 2 x 2 x 1/2" h., 2.5 oz. FP-B case: 2 x 1 1/2 x 3/8" h., 2 oz. Stock price: \$42.00 each net.

FHH-200: Flat package high pass filter, source and load 10K ohms. Units are within 1 db up to 300 cycles 3 db $\pm$ 1 db at 200 cycles, and have an attenuation of at least 40 db at frequencies below 140 cycles. FP-A case. MIL Type: FR4RX33YY.

FLH-600: Flat package low pass filter, source and load 10K ohms. Units are within 1 db from DC to 450 cycles, 3 db $\pm$ 1 db at 600 cycles, and have an attenuation of at least 40 db at frequencies above 800 cycles. FP-A case. MIL Type: FR4RX11YY.

FLH-5000: Flat package low pass filter, source and load 10K ohms. Units are within 1 db from DC to 4.2 KC, 3 db $\pm$ 1 db at 5 KC, and have an attenuation of at least 43 db at frequencies above 6400 cycles. FP-B case. MIL Type: FR4RX11YY.

FLL-3500: Flat package low pass filter, source and load 600 ohms. Units are within 1 db from DC to 3 KC, 3 db $\pm$ 1 db at 3500 cycles, and have an attenuation of at least 40 db at frequencies above 4500 cycles. FP-A case. MIL Type: FR4RX11YY.

FLL-18000: Flat package low pass filter, source and load 600 ohms. Units are within 1 db from DC to 15 KC, 3 db $\pm$ 1 db at 18 KC, and have an attenuation of at least 43 db at frequencies above 23 KC. FP-A case. MIL Type: FR4RX11YY.

FLL-50000: Flat package low pass filter, source and load 600 ohms. Units are within 1 db from DC to 42 KC, 3 db $\pm$ 1 db at 50 KC, and have an attenuation of at least 43 db above 64 KC. FP-B case. MIL Type: FR4RX11YY.

NEW LINE OF SOLID STATE "MAS"™ PUSH-PULL MAGNETIC AMPLIFIERS

For other Magamps see page 6.

The "MAS" magamps operate on an input of 115 V 400 cycles with an output of ± 7.5 V DC, 1000 ohm load and have 2 isolated control inputs. These magnetic amplifiers afford a power gain of approximately 30,000. The power input and output are also completely and individually isolated. The "MAS" magamps are manufactured to MIL-T-27B standards. Units are housed in a hermetically sealed steel case with plug-in octal compressed glass terminal. The "MAS" magamps are 3 inches high with a 1 1/2 inch diameter and weighs approximately 1/2 pound.

The "MAS" magamps have many advantages over other active circuit elements such as tubes, transistors: • Long life and years of maintenance free operation due to magnetic characteristics and solid state elements. • Ruggedness can withstand high shock, vibration, radiation, and moisture. • Reliability — can withstand 10 times overloads and operate into short without damage.

Possible applications include: • Control Amplifier • Photocell • SCR Controls • Strain Gauge Amplifier • Meter Preamps • Thermocouple • Differential Amplifier • Signal mixing, summing, integration • Hydraulic Servo Valve Driver • Servo Motor • Linear Amplifications of Transducer Signals.

NEW, LLP-15, STANDARD LOW FREQUENCY LOW PASS FILTER

For other Filters see page 7.
Designed, Manufactured and Successfully
Tested to Complete MIL-T-27B Specifications.

The LLP-15 low frequency low pass filter has a loss of less than 3 db at 15 cycles and attenuation of more than 40 db at 30 cycles. Source and load impedance 100K ohms. MIL Type: FR4RX11FA. Dim: 2 1/4 x 2 3/4 x 3 3/8" h., 1 1/2 lbs. Price: \$60.00 net.

NEW "FE," FI, FO"™ MINIATURE INDUCTORS

For other High Q Coils
see page 8.

Designed, Manufactured and
Successfully Tested to Complete
MIL-T-27B Specifications.

FE, FI, FO miniature inductors are ideal for transistor and printed circuit applications, having both pin terminals and a molded flat construction. These units are symmetrical toroids providing maximum Q in minimum size. The FE and FI inductors are adjusted at 1 V, 1 KC. The FO units are adjusted at 1 V, 400 cycles. All units are adjusted to a tolerance of $\pm 1\%$. The ma DC Max shown is for approximately 5% drop in inductance. The temperature stability is unequalled from -55°C to $+100^\circ\text{C}$. For AC level limitations, a general rule of thumb would be to consider the maximum AC current approximately equal to the maximum DC current rating. However, for specific applications, contact UTC with exact level, frequency, and Q requirements to determine suitability of part in application. All FE, FI, FO inductors are equally well suited for vacuum tube application. All units MIL Type: FR5RX20ZZ.

NEW "PIL"™ AUDIO TRANSFORMERS

For other PIL'S see page 2.

Designed, Manufactured and Successfully
Tested to Complete MIL-T-27B Specifications.

These units are the smallest audio transformers available. The DOT type structure incorporated overcomes inherently poor electrical characteristics usually found in miniature audio transformers. These ultraminiature PIL transformers are engineered to provide top electrical performance. All units are subjected to a 500 volt dielectric strength test, instead of the usual 100 volts, for higher safety margins and reliability.

Units are designed to a field-proven, ruggedized construction with a completely rigid cylindrical bobbin eliminating wire movement and stress. The turns are circular, effecting uniform wire lay and eliminating corner stress. The leads are rigidly anchored to the coil wire terminal board fashion, eliminating the use of tape, and brought out through strain relief. The units are terminated in weldable and solderable, insulated Gold plated Dumet leads. Dim: 3/8" dia. x 3/8" h., 1/20 oz.

All units are metal encased to Grade 4. Units made to Class S are available on special order. U. S. Patent No. 2,949,591.

PRECISION SCOTT-T REFERENCE TRANSFORMER NEW SCR-10* Tested to Complete MIL-T-27B Specifications

Designed, Manufactured and Successfully
Used in the precise conversion of three wire synchro information to equivalent resolver information. Two outputs 90° apart are obtained, which can be utilized in analog and digital computer application or coordinate transformation applications. MIL type TF4SX09AJ.

Special custom built units with other electrical values are available to your requirements

Input 90V 60/400—3 Phase high impedance suitable for synchro output.

Output 1) 3V @ .25 MA (2) 3V @ .25 MA $\pm$ 2 Phase Output.

a) Magnitudes of output voltage matched within 0.25%.

b) Phase angle of output voltages is $90^\circ \pm .225^\circ$.

PIP* SERIES TRANSISTOR PULSE TRANSFORMERS

UTC's PIP series of subminiature transistor pulse transformers is designed to give a maximum of component density in equipments, their configuration being especially compatible with transistors. The design is based on the UTC DO-T and DI-T series to impart exceptional reliability. PIP-1 through PIP-9 have a ratio of 4:1; PIP-10 through PIP-12 have a ratio of 5:3:1. All units are checked and adjusted in a transistor test circuit to give the required pulse width.

Hermetically sealed, manufactured & guaranteed to MIL-T-20138B by full environmental testing... all units, completely METAL CASED, MIL type TP6RX4410CZ. See UTC page 6 for other miniature pulse transformers.

Tested to Complete MIL-T-27B Specifications.

TRANSISTOR SUPPLY TRANSFORMERS

Primary 115V. 50/60 cycles (tapped on H-143 thru H-146 for dual secondary voltages). DC ratings are approximate, based on silicon bridge rectifier (except H-141, H-142 also shown F.W.C.T.). Choke input DCV is based on 100% voltage drop in choke. Condenser value, C, is in 1000 mfd. H-141, H-142, H-147 listing under "Secs in parallel" is single winding. All units MIL type TF4RX02.

HERMETIC SEALED POWER and PLATE TRANSFORMERS

H-114, H-115, H-117 have terminals opposite mounting.

Power transformers: primary 115V, 60 cycles suited to 50-1000 cycles service. Plate transformers: primary 105/115/220 volts, 50/60 cycles. "L" ratings are choke input. "C" ratings are condenser input. H-80 thru H-197 MIL type TF4R03, H-110 thru H-117 MIL type TF4R02. The tapped high voltage winding provides either of two secondary voltages for greatest versatility. The power transformer listings indicate DC voltages and permissible currents for both choke and condenser input filters, as well as for military and industrial applications.

"W" suffix units designed for full wave center tap and full wave bridge application. Center tap of secondary may be disconnected from ground.

MAT* MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

For new Magamps
see page 1.

VACUUM TUBE TYPE

The MAT-1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 cycle servo motors. They are compact... hermetically sealed... magnetically shielded... and meet MIL-T-27B and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative... power gain of the Magnetic Structure is approximately 40... response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load... for 3 phase, 30° phase shift.

ULTRA-SHIELDED POWER-LINE ISOLATION TRANSFORMERS

Simulates battery operation for critical circuits requiring extreme isolation from power line.

Designed to give the ultimate in isolation, for line-powered equipment, which formerly could only be obtained from battery power. The effective capacity coupling between primary and secondary windings is less than 0.1 MAFD.

PRECISION MINIATURE WIDE APPLICATION PULSE TRANSFORMERS

UTC miniature, wound core, pulse transformers are individually precision adjusted in standard test circuits to close tolerances. They are highly reliability units, hermetically sealed by vacuum molding and suited for service from -70° C. to +130° C. Wound core structure provides excellent temperature stability (un-

like ferrite). Designs are high inductance type to provide minimum of droop and assure true pulse width. H-45 thru H-57 ratio 1:1. H-60 thru H-69 ratio 4:4:1. Others ratio 5:3:1.

See PIP pulse units on UTC page 2.

INTERSTAGE AND LINE FILTERS

Available in stock frequencies listed below (numerical part of type number is cutoff frequency in cps). Compact shielded cases, hermetically sealed to MIL-T-27B specs. BMI, LMI, BMI cases: $1\frac{1}{2}'' \times 1\frac{1}{2}'' \times 1\frac{1}{2}''$ h.; wt., 6 oz. HMI, LMI cases: $1\frac{1}{2}'' \times 1\frac{1}{2}'' \times 1\frac{1}{2}''$ h.; wt., 7 oz. The BMI filters are band pass interstage units designed to operate between a vacuum tube plate (or 10,000 ohms) and a grid. They provide a gain of 2 at center frequency. BTI units are same as BMI, but 10,000 ohms output.

BMI band pass filters, similarly, work into a grid, but have an input impedance of 500/600 ohms. They provide a gain of 9.

HMI filters are high pass interstage units.

LMI filters are low pass interstage units.

HML filters are high pass with input and output impedance of 500/600 ohms.

LML filters are low pass with input and output impedance of 500/600 ohms.

LLP low frequency low pass filter, loss of less than 40 db at 20 cycles. Source & load 100K ohms.

NEW 400-CYCLE 115 V. LINE FILTERS

Intended for use on 115 v., 400 cps line to eliminate harmonic distortion.

UTC No. PLF-25 — Gives 150 v. output into 500 ohm load with ± 1 db, 375-425 cps. Will attenuate 800 cycles by 30 db; 1200 cycles and higher by at least 50 db. MIL type, FR4R11NB. Meets MIL-F-18327B. Size $4\frac{1}{2}'' \times 5\frac{1}{2}'' \times 5\frac{1}{2}''$ d. x $5\frac{1}{2}''$ h. Weight, 10 lbs. Net Each \$66.00

UTC No. PLP-13 — Eliminates harmonic distortion, rejects 60 and 120 cycles, and gives zero phase shift at 400 cycles. Operating into 1000 ohm load, provides 115 v. output at 400 cycles, within ± 1 db, 375-425 cycles. Attenuates 800 cycles by 15 db; 1200 cps by 45 db; above 1200 cps by at least 35 db; 120 cps by 20 db; and, 60 cps by 30 db. MIL type FR4R22-LB; meets MIL-F-18327B specifications. Size, $3\frac{1}{4}'' \times 5\frac{1}{4}'' \times 4\frac{1}{4}''$ d. x $4\frac{1}{4}''$ h. Weight, $6\frac{1}{2}$ lbs. Net Each \$66.00

UTC band pass filters for multiplex transmitting and receiving provide maximum stability in miniature sizes. Stock filters cover all standard transmit and receive bands. All units employ 7 terminal header matching subminiature 7 pin socket.

TGR (receiving) & TGT (transmitting) filters are

600 mhz in and out. They are down less than 3 db at ± 42.5 cycles from center frequency.

TGR units are down more than 30 db at ± 170 cycles. Attenuation is greater than 15 db at center frequency.

TGT units are down more than 16 db at ± 170 cycles. Attenuation is greater than 7.5 db at adjacent channel crossover.

AGC units are down more than 16 db at adjacent channel crossover.

AGC units are down more than 16 db at adjacent channel crossover.

These units provide almost the same characteristics as the standard interstage units listed to the left, although extremely miniaturized. Hermetically sealed to MIL-T-27B specs. B type case: $3\frac{1}{2}'' \times 3\frac{1}{2}'' \times 1\frac{1}{2}''$ h.; wt., 1 oz. H and L cases: $1\frac{1}{2}'' \times 1\frac{1}{2}'' \times 1\frac{1}{2}''$ h.; wt., 2/4 oz. Cutoff frequencies in cps indicated by type number.

BPM units (BAND PASS) have 2:1 gain. Attenuation is approximately 2 db $\pm 3\%$ from center frequency, and 35 db per octave as shown. Input 10,000 ohms, output to grid, tapped for 10,000 ohms to provide for transistor circuits. For tube circuits continuity is on grid side, for transistor use continuity is on input side.

BPH units (BAND PASS) attenuation less than 3 db $\pm 5\%$ from center frequency, and 40 db per octave. Source and load 500 ohms.

HPM units (HIGH PASS) are down less than 6 db at cutoff frequency, and more than 30 db at .67 cutoff frequency, 40 db at .6 cutoff frequency. Input and output 10,000 ohms.

LPM units (LOW PASS) are down less than 6 db at cutoff frequency, and more than 30 db at 1.5 cutoff frequency, 40 db at 1.65 cutoff frequency. Input and output 10,000 ohms.

Both TMN and TMW types are designed for 100 K input and output impedance and have an insertion loss of less than 6 db. Four pin hermetic header matches small Winchester socket.

TMN filters are down less than 3 db at $\pm 7.5\%$ of center frequency. They are down more than 18 db at $\pm 25\%$ of center frequency. Attenuation is greater than 40 db beyond 1.75 Fc and .58 Fc.

TMW filters are down less than 3 db at $\pm 15\%$ of center frequency. They are down more than 20 db at $\pm 50\%$ of center frequency. Attenuation is greater than 40 db beyond 2.5 Fc and .4 Fc.

MNF and MWF (Minifilter) provide same performance as filters described above but are extremely miniaturized. Slanted toward use with transistors. Pin terminals ideally suited for printed circuits.

HIGH Q PRECISION INDUCTANCE DECADE

Invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. The low hum pickup toroid coils employ a new permalloy just core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance frequency. The inductance values are laboratory adjusted to better than 1% precision, with calibration noted on base.

HIGH Q TOROID INDUCTORS

Favorites for over fifteen years, UTC HQ Toroids are only excelled by the preferred new "M" series. As typical Q curves show, HQ coils are available for application from 100 cycles to 100 KC. Adjusted to 1%, the inductance is virtually independent of frequency, temperature, and vibration. Voltage stability is excellent, and shielding case assures 80 db coupling attenuation. Hermetically to MIL-T-27B. All units MIL type TFA4X-20YU.

VARIDUCTORS

These variable inductors are ideal for use in tuned circuits, equalizers, oscillators, etc. TYPE HVC—Gives highest Q and stability; adjustable -70% to +200% of mean value. Hermetically sealed to MIL-T-27B.

HVV Types: For precise matching; vernier inductance variation $\pm 10\%$ of nominal value. Offer high Q over a wide frequency range and high temperature stability.

VIC—Adjustable -45% to +85% of mean value.

Size: HVC, TVC and HVV types, $1\frac{1}{2}$ " lg. x $\frac{3}{4}$ " w. x $1\frac{1}{2}$ " h.; weight 2 oz. VIC type, $1\frac{1}{2}$ " lg. x $1\frac{1}{4}$ " w. x $1\frac{1}{2}$ " h.; weight $\frac{5}{8}$ oz. HVC, TVC, U.S. Pat. No. 2,879,489; HVV, Pat. Pend.

TV type inductors are identical to HVC units, but provide taps at 30% and 50% of total turns—ideal for oscillator circuits, etc. HVC & TVC, U.S. Pat. No. 2,879,489.
